MEMORANDUM

**TO: Kay Packett
Karen Fernicola**

FROM: Joanna Hamilton

RE: BCIA Board Meeting

I Attendance

The attendance at this meeting was lighter than usual. The following companies were represented: Dow, Union Carbide, HBI, ENV, and the Meckler Group. We also had a guest from Johnson Controls, which has shown an increased interest in IAQ since the BCIA briefing on the EPA Building Owner's Guide.

II OSHA RFI

The most important item of discussion was the OSHA Request for Information. We now have a rough draft (attached) of all the material which BCIA plans to submit. Bruce Dickson addressed the Board of Directors on the general approach BCIA should take in advocating the building-systems approach. He is particularly concerned that BCIA not explicitly characterize the benefits of ventilation as simply being the reduction of indoor air contaminants. Although this is obviously one way in which proper ventilation improves IAQ, BCIA should refrain from suggesting that ventilation merely serves to reduce these contaminants to a certain "safe" level. Several of the comments in the attached draft, particularly those drafted by HBI, may need to be reworked to avoid any impression that there is a simple, quantitative relationship between ventilation, contaminant levels, and health effects.

The Technical Committee also dedicated six hours to discussion of BCIA's response.

III Legislation

As you know, the Subcommittee on Health and the Environment has

III Legislation

As you know, the Subcommittee on Health and the Environment has

TI DN 0025872

still not produced the draft IAQ legislation that was promised nearly six months ago, but Cammer is of the impression that it is still high up on Waxman's agenda. The House Science Committee bill has apparently been put on ice until either Waxman or Gaydos move on IAQ legislation. Perhaps their enthusiasm has dampened after the mark-up debacle last year.

IV ASHRAE 62 Committee

Meckler informed the board that the ASHRAE 62-1989 Committee has been changed to a standing committee, which means that it will revisit (and perhaps amend) the standard every year, and also that the new members (which will be selected at the Anaheim meeting on Jan. 26) will likely not be as "building-systems" oriented as the old committee.

I also heard from another quarter that there has been some challenge to the 62 Committee because of the fact that it contains both voting and non-voting members. Apparently, this is inconsistent with the ANSI guidelines, which provide that all members of standard-setting committees should be voting members. Have you heard anything about this?

V EPA Designer's Guide

Bob Axelrad has informed Cammer that EPA's Building Designer's Guide for IAQ is seriously delayed. He gave no indication as to why.
