| | 2018 SI | PRG Primary | David Kent | No Email on file. | |
| | 2018 SI | PRG Primary | Karen Freund | Karen.Freund@tufts.edu | |

These seminars use proposed and ongoing research projects to explore issues in study design. The course provides investigators and trainees the opportunity to present a research-related problem they are encountering and engages students in a discussion of the approach to the problem and an appropriate plan of action.

| 104524 | Translational & Molecular Epidemiology | | | |
|---|--|--|--|--|
| Subject: | Catalog Nbr: | | | |
| CTS | 0501 | | | |
| This course aims to address some of the main challenges of current translational research in the interface of | | | | |
| epidemiology and mole | ecular medicine. | | | |

| 104542 | Bridging the Bench-To-Bedside Gap |
|----------|-----------------------------------|
| Subject: | Catalog Nbr: |
| CTS | 0502 |

This course seeks to diminish the "bench-to-bedside" gap by exposing clinical graduate students to basic science research. Students focus on major questions that are ready for future scientific investigation, how scientific discoveries have influenced clinical practice, and how clinical practice has affected basic research. Examination of active projects at Tufts Medical Center introduces students to translational science in action.

| 104602 Introduction to Biostatistical Methods I | | | | | |
|---|----------|---------|--------------|-------------|-----------------------|
| | Subject: | Catalog | Catalog Nbr: | | |
| | CTS | 0506 | | | |
| | 20 | 17 SUMR | Primary | Sarah Pagni | Sarah.Pagni@tufts.edu |

This course is the first half of a two-part course which presents the practical application of biostatistical methods for exploring and analyzing health data. Methods for working with data and exploring basic associations are presented through case examples and clinical research projects. CTS 0506 and 0507 are considered equivalent to 0527.

| 104617 | Introd | Introduction To Biostatistics II | | |
|--------|-----------------------|----------------------------------|-------------|-----------------------|
| Sub | Subject: Catalog Nbr: | | | |
| CTS | 050 |)7 | | |
| | 2017 FALL | Primary | Sarah Pagni | Sarah.Pagni@tufts.edu |

This course is the second half of a two-part course which presents the practical application of biostatistical methods for exploring and analyzing health data. Methods for working with data and exploring basic associations are presented through case examples and clinical research projects. CTS 0506 and 0507 are considered equivalent to 0527.

| 104658 | | Predictive Models | | | |
|--------|----------|-------------------|-----------|----------------|----------------------|
| | Subject: | Catalo | g Nbr: | | |
| | CTS | 0510 | | | |
| | 201 | 16 FALL | Secondary | Anselm Blumer | ablumer@cs.tufts.edu |
| | 201 | 17 FALL | Primary | David Kent | No Email on file. |
| | 201 | 17 FALL | Primary | Robin Ruthazer | No Email on file. |

This course explores the use of statistical models to predict clinical outcomes for retrospective review and as prospective decision aids. Emphasis is placed on integrating statistical and clinical thinking to construct models that are both statistically and clinically sound and that give accurate predictions when generalized to other populations.

| 104676 | Machine Learning in Predictive Medicine |
|----------|---|
| Subject: | Catalog Nbr: |
| CTS | 0511 |

This course introduces computer science students and clinicians to practical applications of machine learning to solving problems in clinical medicine through creation of collaborative research teams working on unsolved problems with a clinical researcher. The short-term goal is for each team to produce a report presented at the

end of the course. The long-term goal is to build collaborative relationships and the advancement of interdisciplinary work between computer scientists and clinical researchers.

| 104693 | | Comparative Effectiveness Research Survey | | |
|--------|----------|---|--|--|
| | Subject: | Catalog Nbr: | | |
| | CTS | 0512 | | |

The course describes the current state of CER and evidence-based medicine (EBM). The tools of this kind of work are defined including various forms of CER from clinical trials, registry and observational research, technology assessments, and evidence reports. Methodologies used are explained, for example effectiveness trials, decision analysis, cost-effectiveness analysis, systematic review, and meta-analysis.

| 104708 | Clinical Research Project-Certificate Candidates | | | | |
|--------|--|------|---------|----------------|--------------------------|
| | Subject: Catalog Nbr: | | | | |
| | CTS | 0514 | | | |
| | 2018 | SPRG | Primary | David Kent | No Email on file. |
| | 2018 | SPRG | Primary | Jessica Paulus | Jessica.Paulus@tufts.edu |

Students develop mentored research plans with mentors (or mentoring teams) that permits them to demonstrate these skills through the development of a protocol, a report, or research manuscript. The mentoring teams are required to have at least one member who is on the faculty of the Sackler CTS program. The project design is led by students, so they learn the role of principal investigator. This course is required for the Certificate Program, and is not available to non-certificate students.

| 104768 | Clinical Research Project/Thesis Research- First Year |
|---------|---|
| Subject | Catalog Nbr: |
| CTS | 0515 |

First year master's students begin to learn how to complete comprehensive independent clinical research project, which includes framing a research question and specific project aims, identifying useful data sources, developing appropriate methods, identifying and defending against sources of bias, implementing/managing a project, and writing up a thesis in the form of a publishable article or monograph.

| 104826 | | Clinical Research Project/Thesis Research- Second Year | | | |

| | 201 | 7 FALL | Primary | Peter Lindenauer | No Email on file. |
| | 201 | 8 SPRG | Primary | Karen Freund | Karen.Freund@tufts.edu |

This course is an independent mentored experience for students interested in advanced study and skill development in a particular area. This course requires written approval of the Program Director in order to register.

| 104952 | I | Introduction to Clinical Epidemiology | | | | | |
|--------|----------|---------------------------------------|-----------|------------------|----------------------------|--|--|
| | Subject: | Catalog | Nbr: | | | | |
| | CTS | 0523 | | | | | |
| | 2016 | FALL | Secondary | Radley Sheldrick | Radley.Sheldrick@tufts.edu | | |
| | 2017 | 7 FALL | Primary | Jessica Paulus | Jessica.Paulus@tufts.edu | | |

This course provides students with an overview of the epidemiologic approach to the study of disease causation, its natural history, and epidemiologic methods. This course reviews the application of various observational and experimental research designs and strategies utilized in clinical and epidemiological research. Didactic instruction, readings, and problem sets are used to create each module: investigation of disease outbreaks, sources of health information, observational studies, randomized clinical trials, measures of morbidity and mortality, sources of and controls for bias evaluation of diagnostic and screening tests, and development of surveillance studies.

| | 2010 | 6 FALL | Primary | Alex Bohm | Andrew.Bohm@tufts.edu |

Advanced Graduate Biochemistry is intended to allow students with strong biochemistry backgrounds to explore areas of biochemistry relevant to their interests in a more detailed way. It is offered in parallel with BCHM223 Graduate Biochemistry. It is intended for MD/PhD students who have taken Medical Foundations I and for PhD students coming to the Sackler School with a substantial background in biochemistry. PhD students are allowed to transfer to this course after the first BCHM223 examination if they meet the performance requirements set by the Course Director.

This course covers the molecular mechanisms of gene expression and signal transduction. The fundamental mechanisms underlying transcription, RNA processing, translation, and DNA replication are highlighted, and the integration of these fundamental mechanisms into molecular and cellular regulation of proliferation and signal transduction is discussed. Current literature is emphasized.

The course reviews widely-held ideas and current research on the genetic aspects of carcinogenesis. An introduction to cancer concepts is followed by a focus on specific mechanisms and models illustrating the ways in which normal cellular processes are disrupted in particular types of cancers. The course emphasizes problem solving and readings from the current literature.

The course is an intensive, two-week immersion into mammalian genetics with presenters providing background and current research in important areas of mammalian genetics and its impact on health and disease. This course is offered at The Jackson Laboratory, Bar Harbor, ME. Students in the Mammalian Genetics Track have priority for this course; a limited number of slots are available for other Sackler students with permission from the Genetics program and the Dean's Office.

Molecular aspects of viral replication and host-cell interactions are emphasized. Topics include virion structure; mechanisms of nucleic acid replication, transcription, and translation; virion assembly and release; genetics; mechanisms of transformation by oncogenic viruses; responses of the host to viral infection, tumor viruses and tumor cells; and mechanisms of persistent and slow virus infections. Prerequisites: a course in molecular biology or working knowledge of molecular techniques.

| This journal club course for MD/PhD students is organized around the "Clinical Implications of Basic Research" | | | | | | |

column published in the New England Journal of Medicine. Students read a primary paper(s) highlighted in the column or one that is similar to those highlighted and discuss the work. The primary goal of this required course, which meets for one hour every other week, is to encourage and teach students to continually ask how basic research can impact clinical medicine. The format also encourages students to sharpen their communication skills in a relaxed atmosphere.

This journal club course for MD/PhD students is organized around the "Clinical Implications of Basic Research" column published in the New England Journal of Medicine. Students read a primary paper(s) and discuss the work. The primary goal of this required course, is to encourage and teach students to continually ask how basic research can impact clinical medicine. The format also encourages students to sharpen their communication skills in a relaxed atmosphere.

| _ | | | | | |

Students present and defend a proposal for research consisting of a statement of an original research problem in which a scientific question is asked and the experimental approach to answering the question is explained in a written proposal. The proposal is presented orally to the faculty.

This course is a survey of some of the major classes of drugs, with particular emphasis on mechanisms of action and relevant organ systems and cellular physiology. Students are introduced to the central concepts, models and techniques in pharmacology.

| 137629 | | Clinical Pharmacology | |
|--------|----------|-----------------------|--|
| | Subject: | Catalog Nbr: | |
| | PPET | 0212 | |

This course is devoted to the discussion and presentation of therapeutic topics and the basic principles of therapeutic pharmacology. Subjects that are highlighted include: therapeutic drug monitoring, evaluation of side effects and toxicity, critical evaluation of clinical trial data, pharmacokinetic design of dose regimens, drugs in special populations and medical and legal issues in clinical pharmacology. A mixture of lecture, readings and clinical case-oriented problem-solving is used. Extensive independent study and reading is required.

| : | 1018 SPRG | Primary | Theoharis Theoharides | theoharis.theoharides@tufts.e du | |

This course investigates the appraisal of molecular mechanisms by which drugs can affect cellular processes underlying clinical syndromes such as hypersensitivity, rejection, autoimmunity and neuroimmune disorders. Emphasis is placed on select cases of how certain compounds were chosen for drug development and why many such promising drugs failed.

| 137698 | Behavioral Pharmacology | | | | |
|---|---|--|--|--|--|
| Subject: | Catalog Nbr: | | | | |
| PPET | 0219 | | | | |
| This course is an in-depth examination of the mechanisms by which selected psychoactive agents alter mood | | | | | |
| and behavior with emp | hasis on the role of neurotransmitters and their receptors. | | | | |

| 137710 | Advances in Neurochem | | | |

| 139204 | 7 | Teaching Infectious Diseases |
|--------|----------|------------------------------|
| | Subject: | Catalog Nbr: |
| | SK | 0115 |

The course provides the background to teach about infectious disease in high school classrooms. The course is based on a 10th – 12th grade (Biology II) curriculum that has been developed by a partnership between a group of Boston teachers and infectious disease specialists from Tufts Medical School. The goal of the course is to teach the key scientific concepts underlying the curriculum - how bacteria, viruses, and parasites cause infectious diseases and how the immune system defends the body against the attack, as well as the pedagogical strategies to deliver the content in the classroom using a variety of inquiry-based constructivist approaches.

| | 2017 FALL | Primary | Daniel Jay | daniel.jay@tufts.edu |
| | 2017 FALL | Primary | Jamie Maguire | Jamie.Maguire@tufts.edu |

This is an NIH-mandated refresher course for responsible conduct of research (RCR) for 5th year students. It builds on SK 0275, Scientific Ethics; students will work in teams to develop a new case study addressing an RCR issue, provide a written in depth analysis and teach the case study to a small group of students enrolled in SK 0275 under the supervision of the course director. The class provides opportunities for team building, writing, ethical analysis and teaching; grading will be based on the quality of case study and analysis, teaching, effort and participation.

| | 2018 SP | RG Primary | Jessica Paulus | Jessica.Paulus@tufts.edu |
| | 2018 SP | RG Primary | Farzad Noubary | Farzad.Noubary@tufts.edu |

This course serves as an introduction to more advanced topics in epidemiologic study design and biostatistical modeling with a focus on multivariate regression methods. It begins with the randomized clinical trial as a paradigm, and proceed to examine observational designs in depth, including prospective and retrospective cohorts, and those sampling from an underlying cohort (i.e. case-control). Design, sampling and analysis strategies and the biases that are specific to each study design will be discussed.

PPET 0281

2018 SPRG Primary Emmanuel Pothos

emmanuel.pothos@tufts.edu

A generic drug is bioequivalent to a brand name drug when their bioavailabilities (assessed by the respective plasma concentration time curves) after administration in the same molar dose are essentially the same. The comparison of the bioavailabilities is examined by conducting a bioequivalence study. The course will train the students in the design and data analysis of bioequivalence studies.

140762 Basic Skills for Scientists I

Subject: Catalog Nbr:

SK 0101

This three-module course is designed to give trainees basic skills in oral and written presentation, in approaches to the reading of the scientific literature, and designing experiments and interpreting quantitative data.

140763 Basic Skills for Scientists II

Subject: Catalog Nbr:

SK 0102

This three module course is designed to give trainees basic skills in in presenting data and in writing grant applications.

141543 Translational Medicine - Drug Discovery to Clinical Development

Subject: Catalog Nbr:

PPET 0205

2017 FALL Primary 2017 FALL Primary

Emmanuel Pothos Chandrasekhar Natarajan emmanuel.pothos@tufts.edu Chandrasekhar.Natarajan@tuf

ts.edu

This comprehensive course covers key processes from drug discovery to development, including the progression and translation of scientific information through different development stages and the transition to clinical studies, to increase the probability of creating a successful therapeutic product The goal is to impart sufficient background to provide an overall understanding of Translational Medicine that is integral to scientific rationale in Drug Research and Development.

141547 Mouse Transgenic Model

Subject:

Catalog Nbr:

CMDB 0350

2018 SPRG

Primary Lucy Liaw

No Email on file.

This course is designed to give an overview of using the mouse to develop transgenic models of gene expression and gene targeting. In the first half of this course, students will discuss basic transgenic and gene targeting construct design, methods to generate transgenic mice by microinjection methods, and conditional and inducible systems. In the second half of the course, the focus will be on genome editing techniques such as CRISPR/Cas9, zinc finger nucleases, and TALENs, as well as their applications.

This course is comprised of three integrated components; 1) a Medical Microbiology and Inflammation/Immunology Tutorial designed to introduce students to pathogens and pathophysiology of infectious and inflammatory diseases, 2) Infectious and Inflammatory Diseases Problem-Based Learning designed to introduce students to clinical cases, and 3) Teaching Clinics designed to expose students to real clinical cases and treatment options.

| 141613 | S | Survey of Clinical Care Research |
|--------|----------|----------------------------------|
| | Subject: | Catalog Nbr: |
| | CTS | 0125 |

This course offers an introduction to contemporary topics and instruments in clinical care research, with a focus on the role of outcomes research, health economics, systematic reviews and clinical decision making in clinical and translational science. Foundational concepts in clinical trial design (pragmatic and explanatory), meta-analysis and systematic review, health services research, bench-to-bedside translational research, decision analysis, pharmaco-economics and prediction models are surveyed by program faculty. This course also reinforces and applies core concepts in biostatistics and epidemiology by illustrating how study designs and statistical approaches may be applied in the context of these designs and analytic approaches, as well as highlighting pitfalls to certain applications.

| | 2017 | ' FALL | Primary | Angie Rodday | Angie.Rodday@tufts.edu | |

This course introduces the basic principles and applications of statistics, as they are applied to problems in clinical research. The emphasis is on developing an understanding of the assumptions, limitations, practical considerations and critical thinking in the use of statistical methods in data arising from continuous, binary, and time-to-event data. This course will also introduce biostatistical modeling with a focus on multivariate regression methods. Through webinars, the course will include data exercises and class discussion of articles from the scientific literature that apply methods covered in lectures.

| 2018 SPRG | Primary | Jessica Paulus | Jessica.Paulus@tufts.edu |

This course serves as an introduction to topics in epidemiologic study design and analysis, with a focus on those relevant to clinical epidemiology and comparative effectiveness research. After examining the randomized clinical trial as a paradigm, the course proceeds to review the major observational designs, including ecologic, cross-sectional, cohort, and case-control studies. For each study design, relevant sampling and analytical strategies, measures of association and the attendant biases will be covered. Principles and methods will be illustrated through several interactive webinars that include discussion of articles from the literature, data analytic exercises, and causal diagrams.

This course aims to introduce health care professionals and clinical researchers to key economic concepts and their relation to health care. The course is designed for students with no or rudimentary understanding of economics. In addition to providing students with a foundation in economics, the course will provide students with an understanding of the structure and performance of the US health care system, and an introduction to methods for the economic evaluation of medical technology. The course will also include lectures on the regulation of medical technology, health care innovation, and emerging health policy trends. Coursework will include a workshop in which students will gain hands-on experience manipulating economic evaluations for medical technology.

The course focuses on reading primary literature about the role of inflammation in several chronic diseases. The emphasis is on understanding the role of the immune response during the initiation and progression of chronic inflammatory diseases. The course will explore human diseases and delve into available animal models for such conditions, discuss the beneficial vs pathological aspects of inflammation in various diseases, and ongoing therapies and clinical trials for such conditions.

| 142319 | Clinical Trial Practicum |
|----------|--------------------------|
| Subject: | Catalog Nbr: |
| CTS | 0520 |

This course is designed to explore how to design and run real-world clinical trials. Course activities will include hands-on activities in the CTRC with clinical trial principal investigators and staff, invitations to attend IRB and Scientific Review Committees, and meetings with the CTRC Scientific Director and administrative leadership. Through these activities, students will be exposed to some of the cornerstones of launching and implementing a clinical trial. Topics to be covered include cohort identification, patient recruitment, protection of human subjects, disease registries (especially for rare diseases), data collection (biological samples and patient questionnaires) and organizing and managing patient visits at the Clinical and Translational Research Center at Tufts Medical Center.

This course covers the process of bringing a new pharmaceutical treatment against disorders of the central nervous system (CNS) to the market, starting at the conception of a novel idea. Compared to other disease areas, CNS drug discovery faces – literally – several additional barriers. Most importantly, therapeutics need to cross the blood-brain-barrier in order to reach their site of action. This provides unique challenges throughout the discovery and development stages, especially for large molecules like antibodies. Moreover, CNS drug discovery has a high need for innovation in areas such as biomarker development and drug delivery. Students will gain an understanding of pre-clinical research, including molecular, biological, neuroanatomical, electrophysiological, and behavioral techniques; biomarker development and strategy, as well as proof of

mechanism and concept testing in volunteers and patients.
