2013 FALL	Primary	Linda Ross	linda.ross@tufts.edu	
2013 FALL	Primary	Larry Engelking	larry.engelking@tufts.edu	
<p>This course introduces students to the pathophysiology of diseases that occur in the urinary system of domestic animals, including congenital anomalies, infectious diseases, nephrotoxins, immune mediated diseases and urinary tract neoplasms. The effect of these changes on other body systems is also discussed. Basic normal anatomy and physiology are reviewed as necessary to enhance the student's understanding of pathophysiologic processes. Laboratory techniques for assessment of function and disease of the urinary tract and drugs used to treat diseases of the urinary tract are also introduced. The course includes a urinalysis wet laboratory and case presentations that help students integrate and assimilate lecture materials.</p>

<p>The objectives of this course are to give the student an in-depth knowledge of reproductive physiology of common domestic animals. The course builds on the knowledge students have acquired in endocrine and</p>				

Course Bulletin

reproductive physiology as well as general pathobiology, anatomy and histology. The subject matter will form the foundation for the third year Theriogenology course. The normal reproductive physiology and breeding management of the porcine, equine, wildlife (bird and reptile), canine, feline, bovine, ovine, caprine and camelid species will be covered as well as pathology of the male and female reproductive tracts. Wherever possible, the clinical significance of the physiology is emphasized.

This course meets at Tufts Ambulatory Clinic, Woodstock, CT.

130783	Marvet
Subject: VET	Catalog Nbr: 4800
<p>Marvet provides an introductory course in marine mammal medicine for veterinary students and veterinarians who have not had an opportunity for exposure to the marine mammal field. It is intended to provide conceptual and fundamental information on marine mammal biology and medical applications in oceanaria, as well as in emerging population health issues impacting marine mammals in the wild. An additional day is set aside for an introductory consideration of marine fish and turtles as they relate to marine ecological health assessments. Class size is limited so that students have a more effective opportunity to experience learning from leading individuals in the marine mammal field. Species: bottlenose dolphins, pygmy sperm whale, manatee, sea turtles. Marvet 1 takes place at Mote Marine Laboratory in Sarasota, FL. Marvet 2 in Sausalito, California at The Marine Mammal Center. Marvet 3 at St. George's University in Grenada.</p>

130919	Rood and Riddle Equine Hospital
Subject: VET	Catalog Nbr: 4852
<p>Rood & Riddle offers to veterinary students an externship program that provides a clinical experience to satisfy the externship requirements for their degree. As a private clinic we are limited in providing as much "hands-on" experience as a teaching institution. However, there is an enormous amount of information to be gained by observation and exposure to our heavy caseload. Clinicians, interns and technicians make every effort to explain hospital cases and procedures whenever possible. Externs work with hospital clinicians or ambulatory practitioners on a rotational basis. Externs have the opportunity to observe equine specialists in surgery, internal medicine, cardiology, ophthalmology and reproduction. On-site housing is provided at no cost to the student, and is available on a first-come first-serve basis. Externs may stay up to one month. Externs are scheduled to rotate through the surgery, internal medicine, Theriogenology, and ambulatory services, but may request an emphasis on one particular area, if desired.</p> <p>To apply for an externship, students must submit by regular mail or e-mail a letter of intent, including the dates that they wish to come, and preferences, if any towards any particular area in the practice. The student must also have a letter of reference from a professor sent to Dr. Scott Hopper, Rood & Riddle Equine Hospital, P.O. Box 12070, Lexington, KY 40580. After both letters are received, externships are approved and notifications and date confirmations sent to students. For information about externships, please contact Nora Ward at nward@roodandriddle.com.</p> <p>P.O. Box 12070, Lexington, KY 40580 Telephone: (859) 233-0371 Fax: (859) 255-5367 rreh@roodandriddle.com</p>

130954	Veterinary Emergency Treatment Services (VETS)
---------------	---

Subject: Catalog Nbr:
VET 4865

The elective offers hands-on exposure and experience with an emergency practice. The practice works as an overnight and weekend only emergency clinic. Students on the elective will usually work directly with veterinarians that are completing their program towards American College of Veterinary Emergency and Critical Care certification. The rotation consists of exposure on four nights per week. During a given week, students start working Mon evening at 7 PM until 8 AM Tues morning, and the overnight schedule would be repeated on Fri, Sat and Sun nights. The experience is in a 'real life' emergency practice and will provide those not always typically found in the TUSVM emergency and critical care rotation.
Specific questions can go to Dr. Jennifer Ogeer-Gyles at 508-839-5395 or pager # 978-444-0305 or Dr. Ari Jutkowitz at pager # 978-585-4378.

130957	Hospital of the British Columbia Society for the Prevention of Cruelty to Animals
---------------	--

Subject: Catalog Nbr:
VET 4866

See info in paper file. The hospital has a staff of 5 vets and a support staff of 22. It is a full service facility averaging 600 clients over a seven day week. Case loads are heavy therefore students are exposed to an extensive range of medical and surgical conditions. Externship students are expected to work-up cases with the attending vet, assist in surgery and gain competency in clinical procedures. Additionally, students will have the opportunity to spay and neuter SPCA shelter animals. Students spend time learning and practicing "Companion Animal Herd Health". They will also have the unique experience of accompanying our Special Provincial Constables on cruelty investigations.

Course Bulletin

4-6 weeks. Extern will accompany the vet and participate in daily activities (which may even include housekeeping and maintenance work), assist with routine procedures and preventative medicine protocols. Opportunities to participate in operant conditioning of selected species. Assist with the daily care, cleaning and feeding of hospitalized patients and animals in quarantine, medicating those animals which require treatment as well as performing routine lab procedures. One week will be spent shadowing keepers. The student will attend collection plan meetings, keeper update meetings, full staff meetings and informal rounds. The student will also research one aspect of zoo medicine, nutrition, or husbandry and prepare a 30-45 minute presentation to be given at the keepers' meetings or brown bag lunch. Externs also have the opportunity to spend time at the Florida Wildlife Hospital in Melbourne (20 minute drive) or the Folke Petersen Center for Animal Welfare in Palm Beach (80 minute drive), both state-of-the-art wildlife rehabilitation hospitals where the extern will have a more liberal hands-on medical experience with native species.

Beth Nasse email: bgnose@brevardzoo.org Two hotels within walking distance offer discounts for zoo related activities, currently running in the range of \$60/night.

Letter of interest, resume, and letter from one faculty member indicating interest level. No deadline, but slots are first come, first served, only one extern present at a time. Externships should have been completed in large and small animal medicine and exotics, surgery, radiology and anesthesia. Neg TB in last 6 months, current rabies and tetanus vax, must have own insurance and sign waiver of liability.

131167	Metropolitan Veterinary Hospital
Subject: VET	Catalog Nbr: 4948
<p>At Metropolitan Veterinary Hospital, P.S., we believe that prevention is the best medicine. We strive to prevent disease when possible and to detect treatable conditions early on, when treatment can be most effective and least costly. Annual exams are the foundation of a complete health care program. This is the time when we can review the medical history, discuss any ongoing concerns, and investigate any new developments. During the examination visit, we consult on routine care practices and provide owners with feeding, grooming and training advice, where appropriate. Additionally, annual exam visits are an excellent time to discuss the recent advances in vaccination practices and to develop a protocol appropriate for your pet. Small animal practice with some shelter medicine - partnership with the Humane Society spay and neuter program and off site cat adoptions. 131229	Rood and Riddle Equine Hospital
Subject: VET	Catalog Nbr: 4973
<p>Rood & Riddle offers to veterinary students an externship program that provides a clinical experience to satisfy the externship requirements for their degree. As a private clinic the amount of actual "hands-on" experience is limited. However, there is an enormous amount of information to be gained by observation and exposure to our heavy caseload. Clinicians, interns and technicians make every effort to explain hospital cases and procedures whenever possible. Externs work with hospital clinicians or ambulatory practitioners on a rotational basis. Externs have the opportunity to observe equine specialists in surgery, anesthesiology, internal medicine, cardiology, ophthalmology and reproduction. Limited on-site housing is provided at no cost to the student, and must be reserved when scheduling an externship. Externs may stay up to one month.</p>	

Course Bulletin

Externs are scheduled to rotate through the surgery, internal medicine, theriogenology, and ambulatory services, but may request an emphasis on one particular area, if desired.

131234	Woodside Equine Clinic, LLC
Subject: VET	Catalog Nbr: 4975
<p>The externship program at Woodside Equine Clinic will provide a comprehensive learning curve in all aspects of an advanced and progressive equine clinic. The high volume caseload will enhance the individuals clinical competency, diagnostic skills and communication skills. Information will be provided by 8 experienced clinicians/veterinarians in the fields of lameness, surgery, internal medicine, ophthalmology, reproduction, acupuncture and chiropractic, as well as advanced dentistry. Students should have completed at least one year of veterinary school. The practice will ensure that the student has the opportunity to spend equal time with each clinician and participate in all activities. The primary goal is to give the student an in-depth exposure to the type of experience available as an intern. Externs are required to assist the current interns with treatment of hospital cases; assist clinicians in diagnostic and therapeutic care of hospital cases and out-patients; as well as assist clinicians on ambulatory calls. This will include emergency cases. Student must provide own insurance or AVMA PLIT insurance with proof of payment of annual fee. Housing is not available</p>	

Course Bulletin

on site, but we will provide you with a list of area housing available for a minimal fee in your application packet. Student will also be expected to provide their own transportation to and from the clinic.

week elective rotation to late 3rd/4th year students. The clinic is approximately 1.5 hours from TCSVM. The schedule is as follows: Surgery on Mondays, Tuesdays, and Thursdays. Daily experience for students may include pre-surgical exams/preparation, spaying and neutering of cats, dogs, and rabbits. A wellness clinic on Wednesdays may provide the opportunity to perform physical exams, vaccinations, basic lab testing, and treatment of minor problems in the presence of a client. On Fridays, the clinic has arranged for students to accompany an animal control officer from Fall River and spend time in their shelter. The number of surgeries/clinic exams available for a student to perform in any given week varies depending on the caseload and time available. Students should review notes on sterile technique and spay/neuter surgical approaches prior to their elective rotation. Completion of Sasx core rotation is not required. If you are interested in participating in the above elective, please contact Nancy Horniak. Please note, the clinic does not except students every week and/or holiday weeks.

131339	Public Health
Subject: VET	Catalog Nbr: 233
<p>This course challenges veterinary students to explore the relationships between population health and public health, animal health and human health, and clinical and population-based health practice so that they may understand their roles as public health practitioners and veterinarians. It introduces epidemiological concepts and principles, integrates them with biostatistical tools covered in Vet 216, and applies them to the health of animal and human populations. Each concept is illustrated with examples that involve animal and human health, for example measures of disease occurrence may be illustrated with West Nile Virus or rabies, and analytic study design may be illustrated with studies of human health benefits of dog-walking. The course utilizes a variety of formats to facilitate and support the learning process case formats, group discussion and problem-solving, and oral and written articulation of ideas and concepts</p>

131362	Quarryville Herd Health Associates
Subject: VET	Catalog Nbr: 5027
<p>Students will ride along with one or more doctors in the practice each day for routine herd health and emergency calls. Students will have an opportunity to palpate, use ultrasound, perform abomasopexy, administer IV treatment, and assist at calvings or other emergencies that arise. Students will also have an opportunity to assist in our mastitis lab and review culture techniques and results. We serve herds from 40 -1800 cows. We have both Amish and large freestall herds. Students will have the opportunity to see very modern management as well as "older" management styles.</p> <p>2004 Beaver Valley Pike, Strasburg, PA 17579 Telephone: 717.786.3670 Fax: 717.786.7739 QHMA@HOTMAIL.COM</p>	

131365	VCA Vets and Pets Animal Hospital
Subject: VET	Catalog Nbr: 5028
<p>VCA Vets and Pets is a high-quality full-service small animal general practice that offers in-house laboratory, radiology, surgical, and dental services. In addition, board certified specialists visit the hospital to perform advanced surgeries, ultrasounds, and echocardiograms. Boarding and grooming services are also available.</p> <p>Resume required 3345 El Camino Real, Santa Clara, CA 95051 Telephone: (408) 246-1893 Fax: (408) 246-2451</p>	

131367	Clinical Behavior and Shelter Animal Behavior at the Animal Rescue League of Boston
Subject: VET	Catalog Nbr: 5029
<p>Students who partake in this rotation spend anywhere between one week and one month at the Animal</p>	

Course Bulletin

Rescue League of Boston. The students are able to observe and participate in programs for shelter animals (behavioral evaluations, enrichment, dog training, play groups) and behavior appointments for owned animals. We have two experienced veterinary behaviorists who direct the programs and see appointments. We also have two qualified dog trainers who help with the shelter animal programs. Students should expect to spend 5 days a week at the Animal Rescue League, including Saturdays as these tend to be very busy appointment days. As every week is different, we cannot guarantee the number of clinical appointments a student will see. However, when there are no appointments, the students will be kept busy working with shelter animals, reading, watching videos or helping with one of our research projects. Each student is required to prepare either a case or a review of a topic of interest at the end of the rotation. Students will be required to find their own housing. The ARL is close to public transportation.

Website: www.centerforshelterdogs.org and www.arlboston.org Comments: Each student's experience will vary depending on the activities of the various departments during their visit. Every attempt will be made to accommodate specific requests for experience, but there can be no guarantee that every experience will be available every rotation.

The visiting student is expected to review the Animal Rescue League of Boston's website, to include the position statements in order to familiarize themselves with the organization prior to arrival. Students should wear casual dress (khakis & polos eg). No open toed shoes. A volunteer waiver will need to be signed on the first day of externship. There will be a formal orientation the first day of the rotation, and students will fill out a questionnaire about interests and expectations.

Alfredo Sanchez-Londono

Alfredo.Sanchez@tufts.edu

This course is designed to illustrate the clinical applications of various drug groups and their interactions. Basic classes of drugs, their mechanisms of action and their primary therapeutic applications are reviewed. The clinical applications of drug groups, pharmacotherapeutic principles involved and the possible drug interactions are emphasized. Emphasis is also placed on the judicious use of drugs to attain maximum benefits with minimum risk. Drugs with a low therapeutic index are discussed in terms of symptoms to be recognized and the measures to be taken in the event of drug-induced toxicity and emergency.

131471**TCSVM Heifer Watch**

Subject: Catalog Nbr:
VET 1079

The purpose of this selective is for you to gain knowledge and experience in working with beef. This watch is especially important for first calf heifers. The selective will consist of a short classroom informative session to demonstrate proper calving presentation, cattle behavior and calf care. If complications arise, calf-care will be required from the student. Most importantly, how to deal with dystocia will be discussed. The selective will run as follows: A list of calving dates will be given from which you can choose the dates that are needed to be covered. Students may monitor the pregnant dams from the heated herdspersons office. The herdsman will carry a pager and will immediately return page to help assess any complications. Students involved with this selective will be given the opportunity to gain hands-on experience in the parturition process of beef cattle.

131494**Museum of Science**

Subject: Catalog Nbr:
VET 1080

Previous experience in animal care preferred. Interest in working in a museum environment. Good interpersonal skills. The intern will assist in routine care and maintenance of the museum's live animal collection and animal exhibits. This collection currently consists of more than 100 animals (primarily wild species). The intern must arrange to receive academic credit for the internship. Send a cover letter, resume and two letters of recommendation. One recommendation should be from a professor to Sandra Smith, Intern Program Coordinator.

Museum of Science
1 Science Park, Boston, MA 02114
Telephone: 6175890314

131524**Natural Heritage and Endangered Species Program**

Subject: Catalog Nbr:
VET 1081

Should have interest in environmental studies, natural resource planning. Conservation projects include analysis of statewide wildlife rehab data, processing field biologists' observations of Mass. Rare species and/or analyze endangered species records, help evaluate potential impact of development proposals on rare species/ecologically significant natural communities, and/or preparation of state endangered species or zoonotic disease fact sheets. Call for current information and opportunities. Projects vary from semester to semester.

2014 SPRG	Primary	Joyce Knoll		joyce.knoll@tufts.edu
2014 SPRG	Primary	Armelle De Laforcade		armelle.delaforcade@tufts.edu
2014 SPRG	Primary	Perry Bain		Perry.Bain@tufts.edu
2014 SPRG	Primary	Samuel Jennings		Samuel.Jennings@tufts.edu
<p>Normal structure/function and pathophysiology of the hematopoietic and lymphatic systems are covered in this course, including a discussion of coagulation and its disorders. This is followed by principles of instrumentation, performing and interpreting hemogram and coagulation tests. The principles and application of serum biochemical analysis are presented, followed by urinalysis and immunodiagnosics. Cytologic evaluation of body fluids, organs and masses are discussed. Emphasis is placed on integrating concepts of instrumentation and normal and abnormal physiology to introduce the student to developing an organized method for interpretation of laboratory data.</p>				

131535	Nature Conservancy			
Subject: VET	Catalog Nbr: 1082			
<p>Prepare abstracts for stewardship staff and other land managers with current management related information on those species and communities that are most important to protect or control. Summarize data, speak with researchers/academic community, land managers. Learn natural history of endangered species and computer data management. Species include box turtle, short-eared owl, black rat snake, bluet damsel flies, others. Prerequisite: interest in biological monitoring, natural resource planning. Additional info available at Student Affairs Office.</p> <p>Nature Conservancy 759 Milk Street Suite 300, Boston, MA 02109 Telephone: 6174232541</p>				

131548	Northeastern University			
Subject: VET	Catalog Nbr: 1083			
<p>Should have strong interest in wildlife. Take an ecological and systematic perspective working in wildlife biology with mammalogist. Range from shrews to bears and birds. Ectoparasites, carnivore food habits, necropsies, taxonomy, other natural history topics. Research, field work (time of year dependent). Can be tailored to individual interests. Consider meeting with Dr. Jones ahead of selection to talk in terms of specific opportunities for given semester or summer.</p> <p>Department of Biology 360 Huntington Ave, Boston, MA 02115</p>				

Course Bulletin

131560	Wilderness Society
Subject: VET	Catalog Nbr: 1084
<p>December/January, May/June, September 1. Part or full time. Three month, 20 hour/week minimum commitment, flexible hours. Prerequisite: Energetic, organized, responsible, self-starter with excellent written and verbal communication skills, neat and thorough work habits and the ability to work well independently and as part of a team. Interest in environmental issues, working knowledge of IBM-compatible computers, experience with other environmental or public interest organizations. Duration of internship could be extended or renewed at a later time. The Wilderness Society is devoted to preserving wildlife and wilderness, protecting America's prime forests, parks, rivers, deserts, and shorelines, and fostering an American land ethic. Cover letter and resume required. Send to: Julie Wormser.</p> <p>Wilderness Society 45 Bromfield Street Suite 1101, Boston, MA 02108 Telephone: 6173508866</p>	

131574	Topics in Clinical Specialization
Subject: VET	Catalog Nbr: 1085
<p>There are now 21 recognized veterinary specialties, from Surgery to Pathology to Zoo Medicine. Specialization offers a wide variety of career options for veterinarians but is not right for everyone. This selective allows students to explore options for specialization early in their careers to determine whether it's right for the individual and, if so, which specialty fits them best. In addition, for students who wish to pursue specialization, a program comprised of activities such as clinical rounds, clinical experience, and clinical research projects can be developed to help make them as competitive as possible in the internship/residency matching program.</p>	

131584	PBL III
Subject: VET	Catalog Nbr: 238

131587	Accelerated Clinical Excellence Skills
Subject: VET	Catalog Nbr: 1086
<p>This flexible, self-styled selective is designed to help students develop the skills required to be an excellent veterinary clinician, whether in specialty or private practice. These skills include Evidence-Based Medicine (EBM(Evidence-Based Medicine)), the use and critical appraisal of the literature to develop best available treatment practices, effective client communications, career development, and lifelong learning. Students can select from numerous available experiences that can be selected based on individual interests, and credit can be accumulated over the course of a semester, a year, or over two academic years.</p>	

Course Bulletin

131604	Accelerated Clinical Excellence Journal Club
Subject: VET	Catalog Nbr: 1087
<p>Journal club will help students to keep abreast of new developments in areas of their interests in clinical veterinary medicine and to engage in informal discussion and interaction. The ability to critically appraise the evidence is a skill required to become the best possible clinician and this, along with presentation skills will be enhanced through small group discussions of current veterinary articles. Journal club sessions will be led by clinical faculty in areas of interest to the students.</p>	

131619	Canine Splenectomy Research
Subject: VET	Catalog Nbr: 1088
<p>The purpose of the project is to identify predictors of short term survival (survival to discharge) in dogs undergoing splenectomy for splenic mass lesions. Many dogs with splenic mass lesions--particularly those with splenic hemangiosarcoma--have a poor long term prognosis, and a better understanding of the clinical parameters that may predict survival to discharge will enable us to better advise owners considering surgery and hospitalization for their dogs. We have identified approximately 1,100 dogs that have undergone splenectomy for splenic masses during the past several years. We need to assemble a team of about four to five selective students to review the patients' records in FIRST (the hospital's electronic medical records system) and gather clinical data on the patients. The data will then be analyzed statistically at the end of the semester. This selective will give students an opportunity to learn about the design of a large clinical retrospective study, to gain an understanding of the clinical issues surrounding the management of patients with splenic masses, and to participate in data collection for a research project. Students should be prepared to spend a minimum of four hours per week working on the project.</p>	

131634	Tufts Ambulatory Clinic
Subject: VET	Catalog Nbr: 1089
<p>Third year students only. Two students per day. Tufts Ambulatory Clinic 149 New Sweden Road, Woodstock, CT 06281 Telephone: 8609742780</p>	

131650	Dr. Jeffrey Griffiths
Subject: VET	Catalog Nbr: 1090
<p>Observational involvement with an infectious disease section. Includes infectious disease rounds with exposures to issues and concepts of public health, immunology, microbiology and clinical medicine. Tufts University School of Medicine 136 Harrison Ave Public Health and Family Medicine, Boston, MA 02111</p>	

Course Bulletin

Telephone: 6176366941

131663	TCSVM Anatomy Lab
Subject: VET	Catalog Nbr: 1091
<p>Students may choose to do any of the following (one at a time):# Preparation of skeletons: includes preparation of bones and mounting skeletons.# Vascular cast preparations: learn techniques to inject plastic polymers into blood vessels and prepare vascular casts of animal limbs, organs, etc.# Plastic embedding techniques: learn to embed sectioned body parts in clear plastic.# Embalming techniques: learn the techniques of whole body preservation.# Preparing videotaped demonstrations for anatomy teaching.</p>	

131664	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
2013 FALL	Primary
Armelle De Laforcade	armelle.delafordade@tufts.edu
<p>The objective of this course is to give students an introduction to how the small and large animal hospitals, Grafton campus farm and ambulatory service in Woodstock, CT operate. The experience is primarily observational. The student will "shadow" a fourth year student to obtain an insight into the process of medical diagnosis and treatment of diseases. Throughout the year, students will spend a total of one full day in the large animal hospital, one full day in the small animal hospital, one night in the emergency room, one full day on the ambulatory service and one half day (spring semester) at the farm. In addition, students will be assigned to spend either ½ day in anesthesia, or ½ day in wildlife. The goal will be for students to complete a physical examination of a clinical patient during each rotation. In addition, students will be paired with a fourth year student to participate in 2 treatment shifts in the wards over the course of the year. The purpose of treatment shifts is for students to become acquainted with treatment sheets, medical orders, and animal restraint. No textbook is needed for this course. A single short introductory session for the entire class is held before the rotations start. A handout with the required information is available in TUSK.</p>	

131682	International Development
Subject: VET	Catalog Nbr: 1092
<p>This selective will provide students with an introduction to:* International development theory* The role of veterinarians in international development* Support to current international projects being implemented by the International Veterinary Medicine Section* Opportunities to interact with veterinarians and veterinary students* in international settings Prevention and control of diseases of international importance* Socio-economic aspects of animal production and health* Global Health</p>	

131698	Children's Hospital
Subject: VET	Catalog Nbr: 1093
<p>Involvement with variety of species including: rodents, dogs, swine, sheep and rabbits. Experience could</p>	

Course Bulletin

include involvement in laboratory animal care, surgery and postoperative management, basic techniques such as phlebotomy.

Children's Hospital

300 Longwood Avenue, Boston, MA 02115

Telephone: 6173555062

131713	Introduction To Zoological Medicine			
Subject: VET	Catalog Nbr: 240			
2014 SPRG	Primary	Kimberlee Wojick	Kimberlee.Wojick@tufts.edu	
2014 SPRG	Primary	Mark Pokras	mark.pokras@tufts.edu	
2014 SPRG	Primary	Florina Tseng	flo.tseng@tufts.edu	
2014 SPRG	Primary	Jennifer Graham	Jennifer.Graham@tufts.edu	
<p>This course provides the introductory material necessary to set the stage for the Zoological Medicine survey course given in the third year Semester I. In this course we explore the topic of conservation medicine and introduce general concerns with diagnosis, treatment and animal restraint of non-domestic species. Career options in free-ranging wildlife, zoo animal, laboratory animals, exotic companion animal and poultry medicine are also presented with the aim of developing an appreciation for the role of veterinarians in non-traditional settings.</p>				

131714	Harvard Primate Center			
Subject: VET	Catalog Nbr: 1094			
<p>Second and third year students only. Clinical rounds; specialized involvement in medical primatology and gastroenterology. Prerequisite: students should be interested in lab animal and exotic animal medicine. Note: Health hazards potential. Monkeys and hepatitis, be aware and inquire. Current TB test required. Mornings only. Minimum of 10 exposures required for credit.</p> <p>Harvard Primate Center 1 Pine Hill Drive, Southboro, MA 01772 Telephone: 5086258183 Fax: 5086258190</p>				

131732	Introduction to Laboratory Animal Medicine			
Subject: VET	Catalog Nbr: 1095			
<p>This selective is an introduction to the use of animals in biomedical research and the role of the laboratory animal veterinarian. In the first half of the course, presentations from experts in the field cover regulatory control of research animal use, the role of the Institutional Animal Care and Use Committee, animal models in biomedical research, and ethical use of animals. A laboratory animal anatomy module includes three dissection labs devoted to anatomy of rodents, lagomorphs, hamsters, ferrets, and gerbils. The second half of the course is focused on care of research animals and design of research animal facilities. The class will tour a barrier rodent housing facility, a rodent facility using robotic technology, and a primate facility. Students are</p>				

Course Bulletin

expected to attend all classes, labs, and tours. They will be required to write one analysis paper on research animal ethical cases and to work in groups to create a design for a multi-species research animal facility. The class holds a mock Animal Care and Use Committee meeting. This class serves as an introduction and required pre-requisite for admission to the Masters in Laboratory Animal Medicine combined degree program at the Cummings School. Students who do not wish to enroll in the masters program are welcome to take the class as a 1 credit selective.

131736	Emerging And Exotic Diseases Of Animals & Initial Accreditation Training		
Subject: VET	Catalog Nbr: 241		
<p>The Emerging and Exotic Diseases of Animals (EEDA) & Initial Accreditation Training (IAT) course is an on-line self-paced course. This course is designed to provide students with a fundamental understanding of 1) How to recognize the majority of EEDA; 2) The role of the veterinary profession in preventing, detecting, and responding to incursions of EEDA; 3) The role of the OIE, USDA, federal and state governments in responding to EEDA; and 4) The impact EEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation.</p>			

131745	Massachusetts Institute of Technology		
Subject: VET	Catalog Nbr: 1096		
<p>Fridays are not an option. Provides diagnostic laboratory and pathology services to MIT and other institutions. Veterinary care and maintenance of animal health at MIT are primary missions, integrated with diagnostic laboratory services, research funded by NIH and private industry, and postdoctoral training in laboratory animal medicine. Research focuses on infectious diseases in laboratory animals and animal model development. Significant interaction with the biomedical research community.</p> <p>Massachusetts Institute of Technology 77 Massachusetts Avenue, Cambridge, MA 02139 Telephone: 6172531757</p>			

131751	Accelerated Clinical Excellence (ACE)		
Subject: VET	Catalog Nbr: 242		
2014 SPRG	Primary	Lisa Freeman	lisa.freeman@tufts.edu
2014 SPRG	Primary	John Rush	john.rush@tufts.edu
2014 SPRG	Primary	Elizabeth Rozanski	elizabeth.rozanski@tufts.edu
2014 SPRG	Primary	Linda Ross	linda.ross@tufts.edu
2014 SPRG	Primary	Deborah Kochevar	Deborah.Kochevar@tufts.edu
<p>The overall goal of the ACE Course is to give students the skills required for excellence in veterinary practice. This course will provide core information about excellence in clinical practice, and will be complemented by a variety of optional opportunities available to students through the ACE Program. The content of the ACE Course is intended to cover areas which are not specifically addressed in other parts of the curriculum but which are important aspects of becoming a successful clinician, whether in specialty or private practice.</p>			

Course Bulletin

The specific goals of the course are as follows:

To incorporate concepts of Evidence-Based Medicine (EBM) through organized instruction, clinical cases, and active practice using EBM principles. To improve students' abilities to search information resources and critically appraise literature which supports utilization of best available treatment practices. To learn about optimizing communication with clients, selecting diagnostic tests, writing accurate financial estimates, and referring cases. To introduce students to ways to maintain lifelong learning after graduation.

131760	TCSVM Clinical Equine Exercise Physiology			
Subject: VET	Catalog Nbr: 1097			
<p>Second year students only. Exciting, dynamic, practice-oriented, fun - could this really be physiology? The answer is a resounding YES! when you're talking about equine exercise physiology. Whether you're competing with own horse, planning to be a general practitioner, or looking for a career in sports medicine, this selective will give you a good foundation for understanding what is happening in the exercising horse. This seminar-style selective will review cardiovascular and respiratory function in the exercising horse, muscle metabolism, exercise and the immune system, training for speed, strength and endurance, long-term effects of training, the effects of heat and humidity in the exercising horse, nutrition for the sport horse, the use of ergogenic aids, measurement of VO₂max, use of treadmills and heart monitors performance. We will meet once a week during the fall semester for two hours. Discussion will be based on primary literature-you'll learn what journal to read, and how to read then effectively. Meeting times are flexible. This course will also be a pre-requisite for the fourth year clinical treadmill and endoscopy elective.</p>				

131765	Skeletal Pathobiology			
Subject: VET	Catalog Nbr: 243			
	2014 SPRG	Primary	Michael Kowaleski	Mike.Kowaleski@tufts.edu
	2014 SPRG	Primary	Randy Boudrieau	randy.boudrieau@tufts.edu
	2014 SPRG	Primary	Mauricio Solano	mauricio.solano@tufts.edu
	2014 SPRG	Primary	Jose Garcia-Lopez	jose.garcia-lopez@tufts.edu
<p>The objective of the Skeletal Pathobiology course is to offer the veterinary student a more natural learning progression from the normal anatomy, histology and physiology of the muscle and skeleton systems that are taught in the first year of the curriculum. It will provide students with the basic pathophysiology of bone disease and the mechanics of fracture healing, preparing students to enter the 3rd year curriculum more prepared and where they will learn about specific bone and joint diseases and treatments. By setting the groundwork in the 2nd year with this course, the 3rd year curriculum can more appropriately address the clinical treatment of these musculoskeletal disorders (through the presentation of cases with musculoskeletal diseases and discussion of treatment options) without having to go over basic principles, which currently usurps most of the time.</p>				

131776	TCSVM Large Animal Medicine			
Subject: VET	Catalog Nbr: 1098

VET 1102

This selective, offered jointly through the Wildlife Clinic (Dr. Courchesne) and Anatomy (Dr. Hawkes) will serve to build a foundation for a permanent natural history collection. The ultimate aim is the establishment of a campus natural history museum open to members of the public as well as a variety of researchers. Students participating in the selective will be instructed in preparation of avian study skins, and skeletal preparations from a variety of animal classes. Other techniques which may be included based on student interest could include plastination and the preparation of mammalian pelts. The selective will be hands-on and tailored to student interests. Students with prior experience in disciplines such as botany, entomology or parasitology are welcome to bring skills and project ideas as the selective is by no means limited to the techniques listed above.

<p>This course embraces the applied aspects of animal reproduction. It builds on information presented in the second year course covering pathophysiology of the reproductive system. Course material includes diagnosis, treatment, and management of reproductive disorders in the equine, bovine, ovine, caprine, porcine, canine, feline and camelid species. Practical breeding management, evaluation of breeding programs, obstetrics, embryo transfer and advanced reproductive technologies are also covered.</p> <p>This class meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>				

131958	TCSVM Adventures in Veterinary Medicine Program			
Subject:	Catalog Nbr:			
VET	1110			
<p>DVM students staff the day-to-day activities of the AVM Program. AVM is an educational, career exploration program for individuals (6th graders through adults) interested in pursuing a degree in veterinary medicine. Duties include speaker confirmation and support, farm animal management and processing, presentation of information on veterinary specialty areas, leading discussions, mentoring prospective applicants to the school, providing information about the DVM program/Tufts, managing the shadow program, and other duties as required by the Director. If interested, submit cover letter and resume well ahead of summer selective selection dates to Laura Melbin-Diniz, Administration Building, Room 216, Grafton Campus. Selected candidates will be interviewed for the positions. Must have excellent animal-handling, interpersonal and organizational skills as well as reliable transportation. 1 credit, summer selective option: 3-4 students (M-F); 11 weeks (salaried).</p>				

131973	Community Service			
Subject:	Catalog Nbr:			
VET	1111			
<p>This flexible self-styled selective was developed to support TCSVM's commitment to make a positive contribution to the community. It provides DVM students the opportunity to participate in a variety of experiences, for which they can accumulate credit over the course of a semester or over two academic years, depending on how they structure their involvement. Eligible activities may include: * speaking engagements* giving campus tours* working on/participating in STEM (Science, Technology, Engineering and Math)</p>				

Course Bulletin

education and conferences* volunteering at off-campus community service organizations or with TCSVM groups

131987	Gap Junction
Subject: VET	Catalog Nbr: 1112
<p>Gap Junction is an after school program for middle school children from school in the Worcester and Grafton school districts. Each middle school group attends a series of four workshops, held on Tuesday afternoons at the veterinary school campus in North Grafton. Topics focus on the study of body systems. Sessions begin with a brief lecture and are followed by hands-on laboratory exercises and a question-and-answer session. Radiographs, anatomy specimens, stethoscopes, and power point presentations are used to hold the interest of the students. Visits to the lamb shed and horse barn, located on our North Grafton campus, offer urban/suburban students exposure to animals they may never have seen up close. It is a great opportunity to excite middle school students about biology and for veterinary students to develop communication skills for translating complex medical ideas into understandable information to the lay person!</p>	

132003	Teaching Specimen Preparation
Subject: VET	Catalog Nbr: 1113
<p>In this selective students will assist in preparing anatomical specimens for teaching and display, with the humane-oriented goal of decreasing the school's use of animals for anatomy and related courses. Students will learn a variety of techniques for preparing anatomical specimens, with an emphasis on plastination. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying hollow viscera, and corrosion casts of bronchial and vascular systems. Individual projects are encouraged.</p>

132018	Introduction to Geographic Information Systems
Subject: VET	Catalog Nbr: 1114

Course Bulletin

A three week workshop that will introduce students to the fundamental concepts of Geographic Information Systems. It will consist of a theoretical introduction combined with hands-on computer tutorials utilizing ArcGIS software. This course is designed for novices in GIS with specific focus on mapping and spatial analysis applications to human and animal health. Topics discussed in the class include field data collection for mapping using GPS, basic GIS mapping methods, spatial data sources, etc. Students will meet with the GIS instructor for lectures and labs. Students will complete tutorials on their own to develop their GIS software skills. The students will then work with their research mentor to incorporate GIS into their projects. Selective credit for this course should likewise be arranged independently with research mentors.

132031	Pet Loss Hotline
Subject: VET	Catalog Nbr: 1115
<p>The Pet Loss Hotline (PLH(Pet Loss Hotline)) provides grieving owners with an opportunity to discuss the loss of their pet with concerned and compassionate veterinary students. The PLH(Pet Loss Hotline) is part of the Animals in Community track of the Center for Animals and Public Policy at the Cummings School of Veterinary Medicine. As PLH(Pet Loss Hotline) volunteers, veterinary students will obtain experience in supporting owners who have experienced the loss of a pet. The overall goal is for students to put this experience to use during their clinical training and veterinary practice. An experienced counselor will provide training in hotline work. Training includes developing skills for listening and communication, as well as recognizing and dealing with crises. Training sessions will be held on the Grafton Campus, and will be augmented by monthly debriefing meetings with a counselor and faculty advisors to discuss issues (including feelings) that may have arisen during hotline work. Twenty four-hour emergency consultation will be provided as a backup to participants by faculty advisors and counselors as needed. Students *must* attend the mandatory training sessions and monthly debriefing meetings. Student volunteers will be scheduled to work evening PLH(Pet Loss Hotline) shifts during which they will take incoming calls and respond to hotline voice-mail messages. In addition, each semester, students will be required to write a one page case summary of a PLH(Pet Loss Hotline) call that they received, to be submitted to faculty advisors for critique. The aim of this case summary is to encourage the student volunteer to think about the call that they received and how they handled it, as well as to receive feedback from the faculty advisors. Students participating in one semester plus summer break, or two semesters, will receive one credit. Those who participate in one full year (sequential fall, spring, and summer selective blocks) of hotline support will obtain two full credits. In order for the hotline to be adequately staffed, preference may be given to those students attempting a two credit selective. The Pet Loss Hotline has been functioning since 1996. The faculty advisors and student volunteers are very excited about the growth in popularity of the hotline and the opportunity that it provides us with to help people, who have lost a pet, in their time of need. We constantly receive letters and cards from pet owners around the country thanking us for our work. In addition, press releases have unanimously applauded what they see as our vital role in the support of grieving pet owners. The benefits go far beyond a warm, fuzzy feeling. Students find that the training sessions improve their listening and counseling skills as well as communication skills. If you don't know what to say someone if their animal dies, if you can't imagine how to deal with people crying after their animal is euthanized, and if you want to make a real difference, sign up for this selective.</p> <p>5. Pet Loss Hotline Faculty Advisors- Dr. Claire Sharp := Dr. Sharp is an Assistant Professor in the Department of Clinical Sciences. She is board certified in small animal emergency and critical care medicine; working both in the emergency room and intensive care unit of the Foster hospital for small animals. As well as her clinical duties, Dr. Sharp is course director for the Problem Based Learning course, teaches in a variety</p>	

Course Bulletin

of other courses for preclinical veterinary students and performs clinical research. Working on the front lines of the hospital Dr. Sharp understands the importance of the good communication with pet owners and the challenges that veterinarians face as they help pet owners through the grieving process. - Dr. John Byrnes := Dr. Byrnes is a Research Assistant Professor in the Department of Biomedical Sciences. He is a neuroscientist with research interests relating to the brain mechanisms of psychiatric disorders and the neuropharmacology of psychotropic drugs. In addition to research, he is also a clinician in outpatient practice where he provides counseling, neuropsychological assessment, and cognitive rehabilitation to patients with brain injury and other neurological diseases. Dr. Byrnes holds a PhD in Neuroscience and MA in Counseling Psychology.

132046	Tufts Puppy Socialization Class		
	Subject:	Catalog Nbr:	
	VET	1116	
<p>Tufts offers puppy socialization classes for pups that are 4 months old or younger. Class is held in the 800 Conference Room in the Large Animal Hospital on most Tuesday and Thursday evenings from 6:30pm - 7:30pm. Students help with setting up and breaking down the room, handling puppies, performing a mock vet exam, obedience training (if experienced), managing puppy play time, writing individualized reports on each puppy's class progress and writing a short research paper about the role of socialization in the development of fearful behavior.</p>			

132061	Veterinary Informatics		
	Subject:	Catalog Nbr:	
	VET	1117	
<p>The Veterinary Informatics Selective/Elective is an intensive study of topics related to information and computers in veterinary practice. The broad topics covered include:# Assessment of basic computer skills# General internet information# Searching for and evaluating internet veterinary resources# Access and evaluation of veterinary literature# Evaluation of veterinary practice management software# Use of computer technology and software# Internet communication and collaboration# Continuing Education# Web site design and authoringThe selective is designed to help prepare students to utilize technology in their careers to increase the quality of patient care, provide ongoing access to educational information (life-long learning) and to promote information literacy skills.</p>

	Subject: VET	Catalog Nbr: 1128
<p>The shelter policy selective is an intensive course focusing on animal shelter policy. The format is readings, lectures and group discussion. Students may take part one for 0.5 credits or both parts of the selective for 1 credit. Masters students and certificate students must take both parts.h5. Part 1The first part of the course involves ten discussion sessions. The sessions will require some outside reading and will be a mix of didactic and discussion based presentations. Each session will focus on a different topic:* History of animal sheltering and what is an animal shelter* Shelters and the law, animal control in Massachusetts* Adoption Policy* Pet Relinquishment: reasons and preventative strategies* Stress assessment and temperament testing* Euthanasia Policy and decisions* Data collection and research design to support policy decisions* Pet overpopulation: where are we now?* Shelter Design* Integrated Family Medicine: Pets in the family and humane educationh5. Part 2Each student will choose a policy area of interest and prepare a 20 page paper summarizing the issue. The paper should focus on the latest updates in the area and must be referenced. The student is encouraged to include primary sources such as interviews or raw data to support their analysis. The class will meet as a group to discuss the findings and then the papers will be turned in to Dr. McCobb.</p>		

132244	Worcester Animal Rescue League	
	Subject: VET	Catalog Nbr: 1129
Students taking this selective will have the opportunity to investigate the inner working of an urban shelter		

Course Bulletin

that does both private humane society work, and serves as an animal control facility for the city of Worcester and several surrounding communities. The benefit of this type of shelter is that it provides you with the opportunity to see the differences between animals that are owner relinquishments, and those that are picked up as strays by an animal control officer. Adoptions and the entire adoption process can also be observed. You may have the opportunity to see animals at the shelter that are part of an animal cruelty investigation. Participation in this selective will give you an opportunity to observe the flow of animals through the shelter, from adoption to intake processing, to behavioral evaluations of dogs, to life on the adoption floor, and finally to adoption. You will be allowed to participate in the medical care of the animal on intake (perform physical exams, and do routine lab work). Depending on when you are taking the selective, you may be able to assist veterinarians in the spaying and neutering of animals. This selective can either be taken during the semester (on Tuesday afternoons, or Wednesday mornings), or during the summer.

Worcester Animal Rescue League
139 Holden St, Worcester, MA 01606
Telephone: 508 8874570 x84570

132259	Creation of a Veterinary Microbiology Website
Subject: VET	Catalog Nbr: 1130
<p>This one-credit pre-clinical selective is available for one first or second year veterinary student during the spring semester. Students who participate in this selective will assist with the development of a website devoted to veterinary microbiology. Activities include accumulating clinical information and development for interactive case exercises, collection and formatting of information on pathogens of veterinary interest, and website design and content input. Depending on which area students choose to focus on, students are expected to gain an in-depth understanding of the clinical and microbiological aspects of specific veterinary pathogens. Students will gain familiarity with veterinary hospital case records, learn the process of taking information from multiple sources and condensing it into a format suitable for the web, and/or learn web-design and content input.</p>	

132275	Enterohemorrhagic E. coli
Subject: VET	Catalog Nbr: 1131
<p>The pathogen enterohemorrhagic E. coli (EHEC) is considered one to the emerging pathogens of the developed world. In recent years outbreaks associated with eating hamburgers from fast food restaurants have been well publicized in the media. In young children and the elderly infection with the organism can lead to kidney failure and death. In a percentage of cattle, the organism can be found in fecal samples. The main source of human infection is from contaminated hamburger meat. The contamination occurs at the slaughter house during the processing of cattle carrying the organism. My laboratory is interested in understanding the human pathogenesis of this organism. We are currently generating virulence factor knock out mutations in the wild-type organism and studying the virulence of such mutants. We are also developing vaccine strains which will be used on cattle to prevent the colonization of EHEC strains. The student should have an interest in learning techniques in molecular biology and microbiology. Best available time, fall, spring and summer semesters.</p>	

Course Bulletin

132288	Genes and Behavior: What Animals can Tell us about Autism?		
Subject: VET	Catalog Nbr: 1132		
<p>The goal of this selective is to expose students to the current understanding of how animal behaviors are influenced by genetic makeup and environment, and techniques one can apply to analyze the causes of abnormal behaviors and to develop effective intervention programs. A strong emphasis is given to testing social behaviors in animals and determining how an animal's experience affects its chromatin structure and gene activity. Students are expected to:</p> <ul style="list-style-type: none"> # Gain a good understanding of how genetic variations and experience affect brain development and behaviors # Learn laboratory procedures of gene activation analysis and mouse social behavior assessment # Learn how to present scientific findings and how to search for literature. <p>This selective is offered yearly to first and second year students (Fall and Spring). It consists of weekly Journal Club-style discussions and hands-on laboratory research project. Grades will be determined by discussion (30%), oral presentation of an assigned paper (20%), and final report of lab project (50%).</p>			

132303	Gonadal Function		
Subject: VET	Catalog Nbr: 1133		
<p>Central integrative processes controlling gonadal function: role of peptidergic neurons, with emphasis on the endogenous opioid system. Prerequisite: organic chemistry, molecular biology, neuroscience. Best available time, Summer semester.</p>			

132317	Infectious Diseases - Cryptosporidium Parvum		
Subject: VET	Catalog Nbr: 1134		
<p>Molecular biology of Cryptosporidium parvum. Prerequisite: Some lab experience; palpating, calculation of molarities and concentrations, use of pH meter, low-speed centrifuge or similar equipment. Best available time, Fall semester.</p>			

132328	Ophthalmology		
Subject: VET	Catalog Nbr: 318		
2014 SPRG	Primary	Stefano Pizzirani	Stefano.Pizzirani@tufts.edu
<p>This is a comprehensive, clinically-oriented course presented on an anatomic basis. The foundation for the course was provided in previous lectures on ocular anatomy, embryology and histology. The course implies students feel confident with and have reviewed the previously taught material. Representative diseases in major species are presented with emphasis on clinical presentations, pathophysiology and disease mechanisms, differential diagnosis and treatment.</p>			

132331	Issues in Wildlife Policy		
Subject:	Catalog Nbr:		

Course Bulletin

VET 1135

Through a combination of readings, lectures, and discussions, students will be introduced to policy making, and the roles played in policy making by veterinarians, scientists, and other technical professionals. The powers of state, federal, and local governments to regulate treatment of wildlife will be described, along with the government mechanisms in place to implement policies relevant to wildlife. Each student will then pursue an independent literature review on policy relevant to a topic of interest, including but not limited to wildlife conflict resolution, wildlife trade, wildlife conservation, control of wildlife diseases, and environmental impacts on wildlife. Each student will prepare her literature review as a written paper (approximately 10 pages) and present her analysis orally to classmates and the course director. Learning is assessed through a short take-home essay exam (20%), a literature review (40%), class participation in discussions (30%), and an oral presentation (10%). Readings will consist of journal articles, book chapters, and mass media publications that illustrate how the views of different stakeholders are incorporated into wildlife policy. Core readings will be assigned to all students at the beginning of the semester; each student then will be assigned or locate specific readings according to her field of interest. The syllabus, core readings, and other materials will be made available on TUSK, or copies provided in the library of the Center for Animals and Public Policy.

132346	Infectious Diseases - GI
Subject: VET	Catalog Nbr: 1136
Research in infectious disease with particular reference to infections of the GI tract in animals and man. Best available time, Fall and Spring semester.	

132360	Massachusetts Eye and Ear Infirmary
Subject: VET	Catalog Nbr: 1137
Cochlear implants are devices implanted in the inner ears of profoundly deaf people to stimulate the auditory nerve electrically and thereby provide them some measure of hearing. This laboratory uses rats to address questions about fundamental aspects of such stimulation that for technical or ethical reasons cannot be addressed in humans. Anatomical, electrophysiological and behavioral methods are all employed to study the effects of stimulation through permanently implanted intracochlear electrodes. Suitable projects for students are not always available, but inquiries are welcome at any time. Massachusetts Eye and Ear Infirmary 243 Charles St, Boston, MA 02114 Telephone: 6175733864	

132369	L.A. Clinical Anatomy
Subject: VET	Catalog Nbr: 319
2014 SPRG	Primary
Carl Kirker-Head	carl.kirker-head@tufts.edu

Course Bulletin

132375	Orthopedic Research
Subject: VET	Catalog Nbr: 1138
<p>Would you like to learn how new orthopaedic medical devices and drugs are developed and approved for use? Would you like to actively participate in the process? If the answer is yes, Dr. Kirker-Head invites you to join him in an Orthopedic Research Selective built around one or more of the several orthopaedic studies he has ongoing within the Orthopedic Research Laboratory here on campus. Students will be expected to actively participate in one or more of the following: the handling and examination of research animals (sheep and/or horses), induction and maintenance of anesthesia, sterile preparation, surgical procedures, post-surgical care, drug administration, record keeping and a variety of imaging procedures including radiography, fluoroscopy, helical computed tomography, and dual energy x-ray absorptiometry. If this sounds overwhelming - don't panic - others have gone before you. On the job training will be received from Dr. Kirker-Head and colleagues in radiology and anesthesiology where appropriate. Back-ground reading and discussion opportunities will be offered. Genuine enthusiasm is a must.</p>	

132388	Research in Veterinary Medicine - Project Preparation and Implementation
Subject: VET	Catalog Nbr: 1139
<p>The half-credit offering is one afternoon per week. This selective is recommended for students who would like to participate in ongoing research projects either on or off campus. It is also strongly recommended for students doing summer research projects (NIH and Army funded for example) and students in the International Veterinary Medicine Postgraduate Program. In the late fall, the students will receive help and encouragement in research project identification and support in proposal writing. In the spring, the students will continue to develop skills in research methods, scientific writing, statistical methods, critical evaluation of scientific literature, and preparing for their proposed summer research. In addition, this selective will prepare the student for international research by providing a pre-departure briefing and a re-entry seminar.</p>	

132402	Respiratory Medicine
Subject: VET	Catalog Nbr: 1140
<p>To gain first-hand experience in the design and implementation of a novel research project in the field of respiratory medicine. Student will be involved in literature review, experimental design, animal handling, research procedures, collaboration efforts, client communication, data analysis and write up. Monthly meetings with Respiratory Disease Investigation Group (RDIG) will broaden the exposure of selective student to other projects.</p>	

132417	Self-Styled Pre-Clinical Selective in the Bug Lab
Subject: VET	Catalog Nbr: 1141
<p>Self-styled Pre-Clinical Selectives are available to first or second year veterinary students during the Spring semester. Although Spring semester is preferred, depending on the project and level of student expertise, it may be possible to accommodate students during Fall semester-please consult instructor. Depending on</p>	

Course Bulletin

which semester and what year Selective should be project oriented and are expected to utilize the space and equipment available in our research laboratory. Students are welcome to suggest their own projects, participate in on-going research projects, or undertake a suggested project. Participation in this selective requires that students consult the instructor during the previous semester to ensure development of a suitable project. Students are expected to learn how to efficiently obtain and read scientific literature, develop a research project, design controlled experiments, and learn basic laboratory techniques, which depending on the specific project undertaken, may include but not be limited to, ELISAs, SDS-PAGE, Western blots, basic microbiological and or tissue culture techniques.

132425	Small Animal Clinical Procedures Lab			
Subject: VET	Catalog Nbr: 321			
	2013 FALL	Primary	Claire Sharp	Claire.Sharp@tufts.edu
<p>This course provides an introduction to a wide variety of procedures commonly used in small animal medicine and an opportunity to practice techniques on donated dog and cat cadavers. Check lists are utilized to guide students in performing cerebrospinal taps, bone marrow aspiration, transtracheal aspiration, nasogastric tube placement, dental and dermatologic procedures and a range of other technical skills. This laboratory is a prelude to evaluation of the student's skills in performing medical procedures in their fourth (clinical) year.</p>				

132431	The Angiogenesis Foundation			
Subject: VET	Catalog Nbr: 1142			
<p>The Angiogenesis Foundation, a non-profit institution based in Cambridge, MA, is offering a selective to students interested in helping to develop internet-based educational programming on animal health. The Foundation is currently seeking three selective students to help create and implement a new portion of the Foundation's web site dedicated to animal health. Students will help write, edit and graphically present educational content about common diseases in dogs and horses and the role of new angiogenesis medicines in treating these conditions. This selective is a great opportunity for students to explore the use of multimedia in educating the public about veterinary medicine and an opportunity to learn about a premiere area of medical research - angiogenesis. No previous web training required. This selective is offered for fall, spring, summer or over school breaks. The Foundation's office is open Monday through Friday from 8:00am to 7:00pm (or later as required) and the staff is flexible in working with student's schedules. More information about the organization can be found on the Foundation's website: http://www.angio.org/. Interested students must contact the organization before signing up for the selective.</p> <p>The Angiogenesis Foundation One Broadway Street, 14th Floor Suite 200, Cambridge, MA 02138 Telephone: 6175765708</p>				

132445	Medical Topics in Shelter Medicine			
Subject: VET	Catalog Nbr: 1143			
<p>The shelter medicine selective course is an intensive course focusing on applied small animal medicine in the</p>				

Course Bulletin

shelter setting. The format is readings, lectures and group discussion. Parts of the course will be integrated with the shelter policy selective. The course will involve ten course sessions as well as some out of class preparation time. Possible Course Topics: * Shelter Medicine 101: Overview and opportunities in shelter medicine* Concepts of Herd Health and epidemiology in shelters* Feline URI/Other infectious disease* Emergency care and triage in a shelter setting* Diagnostics and pathology in the shelter* Vaccination in shelters and foster homes* Sanitations standards in shelter settings* Transport issues and health* Zoonotic disease concerns/immunocompromised humans* Public health regulations and reportable disease

132453	Standardized Client Interviews
Subject: VET	Catalog Nbr: 322
<p>Successful communication between veterinarian and client is essential for an accurate diagnosis, improving clinical outcomes, practice success, mutual satisfaction, and decreasing malpractice risk. This course is designed to teach the student specific procedures and skills used to communicate successfully with the client, i.e., elicit and understand the client's perspective, and acquire a useful medical history. A lecture and demonstration on the conduct of a good client interview emphasizes both content and behavior. Specific techniques to engage, empathize with, educate and enlist the client are discussed. The lecture is followed by two opportunities for each student to have a simulated client interview, in which the "client" is a trained health care professional who follows the interview session with a personalized critique of student performance and specific suggestions for improvement.</p>	

132459	TCSVM Anesthesia-Small Animal
Subject: VET	Catalog Nbr: 1144
<p>Involvement with large/small animal anesthesia case-load.</p>	

132472	Animal Behavior
Subject: VET	Catalog Nbr: 1145

132483	Introduction to Small Animal Anesthesia and Surgery Techniques
Subject: VET	Catalog Nbr: 323
2014 FALL	Primary April Paul April.Paul@tufts.edu
<p>This course provides an introduction to basic surgical and anesthetic techniques. During the year, each student performs an ovariohysterectomy in two dogs and anesthetizes two additional dogs for ovariohysterectomy. Students are also responsible for pre- and postoperative care of the dogs.</p>	

132487	Critical Care
---------------	----------------------

Course Bulletin

Subject: VET	Catalog Nbr: 1146
Involvement with small animal emergency receiving and small animal ICU patients.	

132503	Facilitating the Placement of Found Animals in the Foster Hospital for Small Animals		
Subject: VET	Catalog Nbr: 1147		
<p>Stray animals are often found by individuals and brought to the FHSA. These animals often need some degree of medical treatment but are treatable and healthy enough to be adopted as pets. The care and placement of these animals is overseen by Dr. Mary Labato and a few of the ward technicians. This job entails duties and the swift and successful placement of these animals which could be expedited by the aid and input of a few student volunteers. This selective includes:# Calling surrounding veterinary clinics and shelters to try and locate the animal's owner# Filling out a medical history and behavior sheet and student contacts for adoption information# Communicating with technicians and covering veterinarian concerning the animals medical needs and time allowed in the hospital# Spending time with these animals: walks, treats and observationOther selective goals include:# Creating a list of surrounding veterinary clinics and shelters with phone numbers to simplify the process of locating animal owners# Creating a waiting list of willing foster homes for animals who can no longer stay in the hospital but have not yet been adopted# Organizing bake sales and other events to raise money for the Travis Fund (a Tufts Account which donated money is used to pay for the medical needs for these potentially healthy animals)</p>			

132509	Bovine Procedures Lab		
Subject: VET	Catalog Nbr: 324		
2014 SPRG	Primary	I Embree	i.embree@tufts.edu
2014 SPRG	Primary	Alicia Karas	alicia.karas@tufts.edu
<p>The objective of this course is to provide third-year veterinary students the opportunity to perform techniques commonly used in the practice of bovine medicine on live animals. Laboratories consist of separate sessions covering general medical procedures, theriogenology, obstetrics and anesthesia. General medical procedures include instruction on history taking and physical examinations, restraint and handling and techniques used in diagnosis and treatment of bovine diseases. The theriogenology session covers the technique of rectal palpation of the reproductive tract. The obstetrics session covers the fundamental principles of bovine obstetrics including mutation and fetotomy using fetal cadavers in a phantom uterus. The course is designed to allow students to perform and practice the above procedures in preparation for clinical rotations during their senior year. Small groups of students are assigned a cow and are responsible for the well-being and medical records of that animal for the duration of the course. Time is scheduled for students to practice the learned techniques with supervised instruction. At the end of the course, the student should be able to demonstrate each of the procedures or techniques covered.</p> <p>This class meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>			

132517	ICU Treatment Crew
---------------	---------------------------

Course Bulletin

Subject: VET	Catalog Nbr: 1148
Treatments, monitoring and animal handling in FHSA-ICU. Second and third year students only.	

132533	TCSVM Neurology
Subject: VET	Catalog Nbr: 1149
Second year students only. This selective will be offered one hour per week in a classroom to discuss a hospitalized case. It is a clinical selective that exposes students to one neurology case per week. History, neurological exam, differential diagnoses, diagnostic tests, and management are discussed as they relate to that patient.	

132537	Clinical Dermatology		
Subject: VET	Catalog Nbr: 325		
2014 FALL	Primary	Eugene White	eugene.white@tufts.edu
2014 FALL	Primary	Alfredo Sanchez-Londono	Alfredo.Sanchez@tufts.edu
2014 FALL	Primary	Lluis Ferrer	Lluis.Ferrer@tufts.edu
2014 FALL	Primary	Andrea Lam	Andrea.Lam@tufts.edu
General principles of dermatologic therapy and diagnosis are reviewed. The common dermatologic diseases encountered in small and large animal veterinary practice are discussed. Emphasis is placed on problem solving using basic knowledge of cutaneous structure, function and pathophysiology as well as the etiology, recognition of cutaneous lesions, history, clinical findings, and laboratory tests applicable to specific diseases or groups of diseases. Specific diagnostic and therapeutic modalities for many of the diseases are discussed.			
This class meets at Tufts VETS, Walpole, MA.			

132547	Oncology (Chemotherapy)
Subject: VET	Catalog Nbr: 1150
First and second year students only. This selective is a full hands on selective. Students will learn the basics of making up and administration of chemotherapeutic drugs, catheter placement, and blood collection. The selective will emphasize safety and knowledge of the drugs used in oncology, and strengthens their technical skills as well.	

132553	Zoological Medicine		
Subject: VET	Catalog Nbr: 326		
2014 FALL	Primary	Kimberlee Wojick	Kimberlee.Wojick@tufts.edu
2014 FALL	Primary	Mark Pokras	mark.pokras@tufts.edu
2014 FALL	Primary	Florina Tseng	flo.tseng@tufts.edu

Course Bulletin

2014 FALL	Primary	Maureen Murray	maureen.murray@tufts.edu
2014 FALL	Primary	Jennifer Graham	Jennifer.Graham@tufts.edu
<p>This course deals with the comparative veterinary medical aspects of all non-traditional species, including wildlife, zoo animals, laboratory animals, birds (including poultry) and exotic companion animals. The course systematically covers captive and free-ranging disease issues of the major taxonomic groups from invertebrates to primates. Emphasis is placed on the value of understanding the material in the context of general veterinary medicine and becoming effective animal advocates regardless of the student's particular interest or chosen specialty.</p>			

132561	TCSVM Radiology		
Subject:	Catalog Nbr:		
VET	1151		
Diagnostic Imaging experience. Second or third year students only.			

132576	Paws for People (Animal Facilitated Activities)		
Subject:	Catalog Nbr:		
VET	1152		
<p>Classes are taught by Delta instructors on becoming a registered visitor; what the animal handler needs to know, following this class students will be eligible to apply to the Delta Society for registration as a trained visitor. There is a \$80 fee for students to take this Delta Course. This includes a book and paying the lecturers. However, the course director has agreed to waive the 80 fee if students are willing to use a borrowed workbook from Paws for People, rather than purchase their own book. There is also a fee payable to the Delta Society if the student chooses to become registered with them. Registration is voluntary and not required as part of the selective. After completing the training the student will help perform evaluations of volunteers and their dogs. The student will spend two days assisting with evaluations and will also observe two visits for a total of 20 hours. The last eight hours of the selective will consist of visitation by the student and a short (20 minutes only) presentation to the Tufts Paws for People Advisory Board summarizing their experiences.</p>			

132582	Veterinary Economics and Practice Management		
Subject:	Catalog Nbr:		
VET	327		
2014 FALL	Primary	Joseph McManus	joseph.mcmanus@tufts.edu
2014 FALL	Primary	Eugene White	eugene.white@tufts.edu
2014 FALL	Primary	Armelle De Laforcade	armelle.delaforcade@tufts.edu
2014 FALL	Primary	Cheryl Blaze	Cheryl.Blaze@tufts.edu
<p>This course is designed to acquaint veterinary students with business and economic issues involved in the practice of veterinary medicine. Particular attention is placed on the veterinary service model, practice management, client communications, marketing, veterinary fees, and the role of staff. In the second half of the course the emphasis will shift to topics related to practice management. A series of guest lecturers will expose students to 'real life' business and management concepts as they relate to small animal practice, equine practice, and ambulatory practice. A project will be assigned to allow students to pursue learning in additional topics related to veterinary practice management.</p>			

Course Bulletin

132590	TCSVM Small Animal Medicine
Subject: VET	Catalog Nbr: 1153
Can take up to six students (morning or afternoon) during the summer semester and three students during the fall and spring Semester.	

132596	Euthanasia Seminar
Subject: VET	Catalog Nbr: 328
2014 SPRG	Primary
Emily McCobb	emily.mccobb@tufts.edu
<p>This course is organized and moderated by faculty from the Tufts Center for Animal and Public Policy. The format is a day-long seminar mixing didactic lectures, panel presentations and class discussion. Topics covered include: ethical issues around euthanasia, appropriate drugs and non-pharmacological methods of euthanasia, appropriate euthanasia protocols and techniques for specific species (companion animals, equine, bovine, wildlife, and exotics are highlighted) as well as regulations. Euthanasia in specific settings, for example small and large animal practice, laboratory medicine, animal shelters, zoos and disasters will be discussed. The seminar includes participation from practicing veterinarians, as well as some training on client communications. There are also opportunities for students to ask questions and discuss concerns with presenters. The goal of the course is to familiarize students with the ethical, logistical and emotional aspects of animal euthanasia as well as to prepare them to observe and participate in euthanasia during their upcoming clinical year.</p> <p>This course meets at Tufts VETS, Walpole, MA.</p>	

132607	TCSVM Small Animal Surgery
Subject: VET	Catalog Nbr: 1154
Involvement in clinics of along with small animal surgery staff, faculty and fourth year students.	

132608	Ethics and Veterinary Medicine
Subject: VET	Catalog Nbr: 329
<p>This course acquaints students with ethical issues in various aspects of veterinary medicine through short faculty presentations and reading assignments. Students then analyze and discuss these current ethical issues in small groups. The course emphasizes the process of problem solving in addressing ethical issues and encourages thoughtful and respectful debate.</p>	

132621	TCSVM Small Animal Wards
Subject:	Catalog Nbr:

Course Bulletin

VET	1155
Treatments and animal handling involving small animal inpatients. Three half-semester one afternoon per week offering.	

132635	Hands-on Biostatistics
Subject: VET	Catalog Nbr: 1156
Offered to second year students. This selective is designed to be both an adjunct to VET 216 (Epidemiology and Biostatistics) and a continuation. Statistics will be learned using an active approach, emphasizing practical applications of the concepts learned in VET 216. Students will gain experience in analysing data sets and presenting data. In addition, students will become familiar with using Excel for basic statistical analyses and SPSS for more advanced statistics. Laptop computers are required.	

132636	Clinical Animal Behavior		
Subject: VET	Catalog Nbr: 341		
2014 SPRG	Primary	Nicholas Dodman	nicholas.dodman@tufts.edu
2014 SPRG	Primary	Alfredo Sanchez-Londono	Alfredo.Sanchez@tufts.edu
Topics focus on the diagnosis and treatment of common clinical behavior problems in dogs, cats and horses. Aggression, fears and phobias and compulsive disorders are covered for all three species. Principles of learning, evolution of behavior and behavior genetics are discussed where applicable. Pharmacologic approaches to managing behavior problems are discussed.			

132648	VCA Abbott Animal Hospital
Subject: VET	Catalog Nbr: 1157
Abbott Animal Hospital 21 East Mountain Street, Worcester, MA 01606 Telephone: 5088533350	

132661	Acton Animal Emergency Care
Subject: VET	Catalog Nbr: 1158

132908	Avian and Exotic Animal Hospital
Subject: VET	Catalog Nbr: 4006
<p>5000 patients annually: 55% avian, 20% rabbit and rodents, 10% ferrets, 10% reptiles, 5% other (fish, primates, amphibians, wildlife). There is exposure to birds, reptiles, small rodents and companion exotic animals. There is exposure to a wide variety of areas of medicine in this field, including consulting for aviculturists, pharmaceutical companies, industrial breeders of rabbits and the pet trade. The bulk of the practice consists of vigorous medical and surgical clinical cases. We offer the very best medical and surgical services for birds, exhibit and companion exotic pets including reptiles, amphibians, fish, rabbits, rodents, ferrets and non-domestic mammals. The practice is limited enabling us to focus on these animals unique needs. The externship program aims to expose students to exotic patients commonly and rarely seen in a private practice situation, which greatly differs from a university setting. Students are encouraged to interact with clientele, to observe and assist the staff as needed and to participate in the private practice environ. The Avian and Exotic Animal Hospital shares a facility with the VCA Emergency Animal Hospital (EAC) and Referral Center, providing potential consultation with veterinarians boarded in internal medicine, cardiology, surgery, neurology, emergency medicine, radiology and ophthalmology. Together with the EAC our hospital offers a full spectrum of in-house diagnostics including white blood counts, chemistry profiles, aerobic cultures and sensitivities, fecal examination, radiology, endoscopy and laparoscopy and ultrasonography. Duration: 4 week blocks Low cost housing available. Please contact by phone or mail. Short letter with dates that you are available, your career objectives and a personal reference knowledgeable of your interest and experience in birds or exotics. 2317 Hotel Cir S Suite C, San Diego, CA 92108 Telephone: (619) 260-1412 Fax: (619) 260-1499</p>

Course Bulletin

VET 402

Students are assigned to a staff surgeon and resident. They participate in the diagnostic work-up, surgical treatment and postoperative care of the patients on the service, based upon the caseload presented. They are expected to be familiar with all aspects of the cases under their care, and also those of the other student(s) on the service. All teaching is performed during case rounds and one-on-one at the operating table throughout the day. The students will be required to utilize their didactic background in assessing, then performing the surgical technique (via their assistance), and evaluating the postoperative course – including deductive reasoning along the way (to be able to think the case through to its conclusion). Although the students will not be performing the majority of the techniques they are exposed to, their exposure to these surgical cases will allow them to familiarize themselves with the available technique(s) and formulate a diagnostic approach to the patient, and provide appropriate information regarding treatment and prognosis. Two weeks is spent on two of three services: orthopedic, general surgery, and chief resident.

133068

Mystic Aquarium

Subject: Catalog Nbr:
VET 4025

With the assistance of both external and in-house funding, the Department of Animal Health of Mystic Aquarium, a division of Sea Research Foundation, is sponsoring a one-year internship/research opportunity in aquatic animal medicine. Applicants for the internship should be graduates of an AVMA accredited veterinary college or ECFVG certified. Preference will be given to applicants with graduate degrees and/or postgraduate clinical experience in a practice or internship setting. Entry level familiarity with ultrasound, radiology, and endoscopy systems is expected. The stipend for the position is expected to be > \$26,000 per annum plus benefits. The successful applicant will assist the veterinary, research, and husbandry staffs in the diagnosis and treatment of medical cases from the Aquarium's extensive collection of invertebrates, fresh and saltwater fishes, reptiles, amphibians, penguins, seals, sea lions, and beluga whales. In addition the intern will participate in our rescue, rehabilitation, and release program for stranded marine mammals and sea turtles. Collateral opportunities at cooperating area academic, government, and private industry laboratories are possible and encouraged. The intern may have an opportunity to develop teaching skills by his/her involvement in the Aquarium's veterinary externship program and at informal seminars. The intern will be expected to pursue one or more clinical or research interests and to prepare the results for presentation to our staff and at an appropriate professional meeting as well as for publication in the peer reviewed literature. Past interns have gone on to acceptance into well-recognized graduate/residency programs or employment in the field of aquatic, comparative, or zoological medicine.

Applicants should submit the following material to: DR. ALLISON D. TUTTLE STAFF VETERINARIAN MYSTIC AQUARIUM 55 COOGAN BLVD. MYSTIC, CT 06355 1. A current transcript from the veterinary school and any post baccalaureate program which he/she has attended. 2. Three letters of recommendation from individuals familiar with the applicant's academic performance and his/her potential in the clinical and research arenas. 3. A statement reflecting the applicant's goals in the area of aquatic animal medicine and research. 4. A current curriculum vitae or resume. Potential applicants who will be in the southern New England area are encouraged to contact us for a tour of our facilities and a chance to meet with our staff. All application materials must be received prior to 01 January 2008. The successful applicant will be chosen and notified by 10 Jan 2008 and must commit to the position within 72 hours. The internship period will extend ~ from 1 June 2008 through ~15 June 2009. With prior agreement by both parties an additional year in the program may be possible. Additional information may be obtained by calling Dr. Tuttle at 860-572-5955, or by e-mail at . A

133147	Large Animal Surgery Rotation			
Subject: VET	Catalog Nbr: 404	14-15 TERM	Primary	Patricia Provost
				No Email on file.
<p>This rotation provides hands-on clinical experience in sports medicine and with diseases of surgical significance in large domestic animals. The student participates in the diagnosis and management of both out and in-patients and is responsible for the day-to-day monitoring of assigned cases. Through daily updates of the written record as well as oral presentations at ward rounds, the faculty gains insight into student development and helps in decision-making pertaining to continued therapy. The goals of the rotation include thoroughly familiarizing the student with common diagnostic and therapeutic procedures and to recreate, as nearly as possible, the responsibilities inherent in the practice of clinical large animal surgery and sports medicine. Regularly scheduled seminars provide in-depth discussions of selected topics and clinical problems.</p>

<p>Zoo Medicine (Preference given to Tuskegee students/University of Georgia Vet Students). General zoo animals, emphasis is placed on Great Apes and Reptiles. The extern will report to the veterinarian and the veterinary technician. Externs are involved with hospital and quarantine animal care. Externs rotate through keeper areas to become involved with general husbandry. Externs will assist in various medical procedures. Externs will have an opportunity to become more familiar with immobilization equipment. Duration: 6-8 Weeks, 1 extern per rotation.</p> <p>Cover Letter, CV, 2 letters of reference, a personal or phone interview is required.</p> <p>800 Cherokee Avenue, Atlanta, GA 30315</p> <p>Telephone: (404) 624-5600</p> <p>info@zooatlanta.org</p>	

133176	Ambulatory Medicine Rotation
Subject: VET	Catalog Nbr: 405
14-15 TERM	Primary I Embree
i.embree@tufts.edu	
<p>This rotation provides on-the-farm training for the students. The majority of the practice consists of dairy cattle and horses, while sheep, goats, camelids, and swine comprise the remainder. A large amount of time is devoted to dairy reproductive work and developing the herd health concept. An effort is made to provide as practical a practice situation as possible with emphasis on preventative medicine.</p> <p>This course meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

133177	Peregrine Fund: Hawaiian Bird Conservation & Restoration
Subject: VET	Catalog Nbr: 4039
<p>Avian medicine. The Olinda ESPF was established in 1986 by the Hawaii Division of Forestry and Wildlife for the propagation of endangered Hawaiian avifauna. Clinical experience will be provided during routine and emergency care of captive flock. Lab tests and their interpretation will be emphasized utilizing facilities on site. Students will spend a required portion of their time with the staff aviculturists learning basic avicultural skills and will have the opportunity to participate in any ongoing research projects. Duration: 4 weeks Note: This facility was transferred to the Peregrine Fund in March 1996 and this externship information has not been verified since then.</p> <p>Will Provide: Housing/Stipend (\$100/week)</p> <p>4th year only, Resume/CV, letter of interest (include desire dates for externship) and an appropriate letter of reference</p> <p>535 Olinda Road, Makawao, Maui, HI 96768</p> <p>Telephone: (808) 572-0690</p>

<p>Entirely lab animals; 90% rodents, mostly mice, also rabbit, dog, cat, pig and sheep Good opportunity for clinical/pathological correlation in rabbit and rodent diseases, review of lab animal disease syndrome, used computer database in a lab animal practice. Number of Students to be accepted: 1-2 Description: The ARC provides clinical veterinary care, animal care and diagnostic services to the Harvard Medical Area research facilities. The center provides care for 40,000 to 60,000 animals, mostly rodents but also rabbits, dogs, cats, and sheep. Practice includes clinical treatment of assorted species, diagnosis of disease problems endemic in resident populations and suppliers.</p> <p>Resume Cambridge, MA Telephone: (617) 432-1285</p>	

133232	Wildlife Clinic Rotation
Subject: VET	Catalog Nbr: 407
14-15 TERM	Primary Florina Tseng flo.tseng@tufts.edu
<p>Students in the Wildlife Clinic rotation actively participate in the handling, diagnostics and medical and/or surgical treatment of a wide variety of native New England wildlife, including threatened and endangered species. A large number of sick, injured, and orphaned wildlife are seen. Species diversity varies tremendously from season to season. The Wildlife Clinic rotation includes several didactic sessions including physical examination and bandaging of wild birds, allometric scaling, avian radiology, and avian hematology. Fourth year students act as the primary clinicians on cases. They are directly supervised by Clinic doctors. Students</p>	

Course Bulletin

gain experience in handling and examining wildlife species, taking and interpreting radiographs, and various clinical pathology techniques. Students are not required to have previous hands-on experience with wildlife species prior to the rotation but are expected to be able to apply knowledge gained from didactic courses, including comparative medicine, to their cases. Because many of the species that the Clinic sees are not included in veterinary texts, the Clinic maintains an extensive library of wildlife related literature. Students are expected to utilize these resources to enhance their learning experience.

133238	Office of Laboratory Animal Care, Univ. of Calif. Berkeley

---------------	---------------------------

Course Bulletin

Subject: Catalog Nbr:

VET 408

14-15 TERM

Primary

James Sutherland-Smith

James.Sutherland_Smith@tufts.edu

This 3-week rotation prepares the student to correctly interpret and produce radiographs of large and small animals. Students will have the chance to further improve their ultrasound skills and to appreciate the role of advanced imaging techniques such as nuclear medicine, CT and MRI in a referral-level practice. The student will rotate through the different areas of the diagnostic imaging section and under the supervision of the radiology technical staff, will take radiographs of the daily clinical cases presented to the hospitals and assist with ultrasound and nuclear medicine studies. The student will also provide unsupervised weekend and after-hours weekday coverage of the small animal radiology caseload. Most of the technical aspects needed to produce a diagnostic radiograph in the private practice setting, including radiation safety, will be covered. Film reading exercises with the radiology faculty and residents will be held daily. In addition, there will be independent study periods of a PACS-based teaching file. Non-graded weekly exams will be given in the first two weeks with a graded case-based exam at the end of the rotation contributing 15% of your grade. Grades are based on the input of the entire faculty, residents and technical staff members in radiology and are scored in accordance with a rubric that is available for download on TUSK. A textbook is not required for this course. A handbook with all pertinent information regarding the rotation is available in TUSK for download. The final year program requirements for evening treatment shifts of hospitalized patients will be completed concurrently with the radiology rotation.

133275	Anatomical & Clinical Pathology Rotation			
Subject: VET	Catalog Nbr: 409	14-15 TERM	Primary	Joyce Knoll joyce.knoll@tufts.edu
<p>In this rotation student time is divided between the two disciplines of diagnostic pathology. The anatomic pathology portion of the rotation offers a "hands-on" opportunity to appreciate the concept that altered structure is the basis of altered function. In addition to being taught how to perform a postmortem examination, students are encouraged to correlate patient history, clinical signs and the clinical diagnosis with the gross and microscopic lesions and subsequently facilitate their understanding of the causes of disease and the mechanisms by which they are provoked. Tissue sampling for histologic examination is emphasized, however the sampling of tissues for cytologic, microbiological and toxicologic examination are also discussed. Students learn how to construct a concise gross autopsy report from postmortem findings, and have the opportunity to present selected autopsy cases at weekly Thursday afternoon pathology rounds attended by first, second and third year veterinary students in addition to hospital clinicians and/or residents involved with many of the cases submitted for autopsy.</p> <p>The clinical pathology portion of the rotation uses a case-based approach to review the principles and interpretation of laboratory tests including urinalysis, CBC's, chemistry profiles, and endocrinology assays.. Students are given the opportunity to practice techniques such as microscopic examination of blood smears and urine sediment. They are introduced to the underlying principles of hematology and chemistry instrumentation and factors that can affect test results.</p> <p>Students meet at 8:00 AM in the pathology conference room. Mornings are devoted to discussion of clinical pathology case material. Afternoons are spent in anatomical pathology. The only dress code requirements for the clinical pathology section is that open-toed shoes and shorts are not allowed, Scrubs or coveralls and boots are required for postmortem examination activities. Students will be on-call for autopsies on weekends and holidays on a rotating basis, but are not considered "essential" in the event of weather related campus closings.</p>

Students on the cardiology rotation will interact with dogs, cats, and, less commonly, large animal or exotic species with cardiovascular diseases. Goals for the rotation include development of auscultation and cardiovascular physical examination skills, ability to obtain arterial blood pressure, ability to obtain and interpret diagnostic electrocardiograms, ability to interpret thoracic radiographs, and ability to identify cardiac structures and common diseases via observation of echocardiography. Students should enter the rotation with a background knowledge of treatment options for cardiovascular diseases (drugs, diet, interventions) and should refine this knowledge and learn how to apply it to clinical cases during the course of the rotation.

133509	Oncology Rotation
Subject: VET	Catalog Nbr: 417
14-15 TERM	Primary Lisa Barber
<p>The goals of the oncology rotation are to expose students to the systematic evaluation of companion animals diagnosed with cancer and to gain familiarity with the modalities available to treat cancer in a clinical setting. Students primarily will interact with dogs, cats, and occasionally other species with various types of neoplasia. Students should enter the rotation with a fundamental knowledge of the basic principles of oncology. During the rotation, students will have the opportunity to assess patients in different stages of disease, participate in devising treatment regimens, and to review responses to therapy.</p> <p>Our hope is that the experience gained through an oncology rotation will help new veterinarians advise clients on the range of options available to treat companion animals with cancer and shape owners' expectations regarding the treatment process.</p>

Subject: VET	Catalog Nbr: 426
14-15 TERM	Primary Gregory Wolfus Gregory.Wolfus@tufts.edu
<p>A partnership between the Cummings School and Worcester Technical High School, Tufts at Tech Community Veterinary Clinic has been formed to create a small animal outreach clinic which can support the low income pet population in the greater Worcester area. The clinic offers a 2-week primary care practice rotation (currently elective) which is designed to provide fourth year clinical students with an opportunity to gain hands-on clinical experience in preventative health care medicine in a private practice setting.</p> <p>Under the direct supervision the clinic director or other staff doctors, students will perform preventative health care exams, develop diagnostic and treatment plans, communicate plan and fees to the clients, tailor a wellness plan that addresses the individual needs of the patient, as well as perform common procedures in a general practice setting. In order to provide the potential for students to get follow-up on their cases, the rotation is set up as a 2-week block. During the rotation, students will not only develop a better understanding of wellness health care, but will also develop communication skills by interacting with and informing owners regarding issues such as vaccination protocols, parasite control, proper nutrition, dermatologic concerns,</p>	

Course Bulletin

behavior issues, weight management, senior pet concerns and general dentistry. In addition, the students will have the opportunity to support the OneHealth initiative by contributing to the education of high school students while offering primary veterinary care to a historically under-served pet population.

Subject: VET	Catalog Nbr: 427
<p>A capstone pre-graduation core 1-week course has been added to the 4th year curriculum and will begin with the class of V13. The required program will avoid lecture format and emphasize panel discussions and role-play for interviews and client conversations. The emphasis will be on communication, financial skills, work-life balance, and leadership skills. Alumni and members of the MVMA will be recruited for discussions and mentorship. A major goal of the program is to provide content that is attractive to graduates going into practice or internships with emphasis on small animal, equine, or food animal medicine, and carrier pathways such as pathology and laboratory animal medicine. Specific topics include finances and debt management, family-life-career balance, insurance planning, mentoring, the art of negotiation, difficult financial negotiations, practice ownership, and changing jobs.</p>

Course Bulletin

Subject: Catalog Nbr:
VET 4115

Exclusively equine practice in a rural setting in Eastern CT. We are primarily an ambulatory practice with a clinic for minor procedures. The practice provides predominately primary care and the case load reflects this presenting a wide variety of problems involving lameness, reproduction, medicine, minor surgical cases and emergency. I expect the duties and responsibilities of the participating extern will be to participate in morning rounds and then accompany one of the clinicians on their daily schedule. Riding time between call should allow for a wide array of discussions about the cases, medical decision making, economics, etc. Currently the clinic is not set up to accommodate overnight lodgings, but it may be possible depending on the individuals willingness to "rough-it".

<p>This course consists of lectures and systematic dissection of the dog and cat, designed to gain a comprehensive knowledge of macroscopic anatomy of the carnivores (mainly dog, but important structural differences of the cat included). The objectives of this course are to understand and correctly use anatomical terminology, understand the organization of the skeleton (osteology), classification and function of various joints (arthrology), identification and attachments of axial and appendicular muscles (myology) and their innervation, effects of lack of innervation, the central versus peripheral nervous system, major nerves of the body (neurology), major vessels and their branches to organs (angiology), and organization of respiratory, digestive and urogenital tracts (splanchnology).</p> <p>Prerequisite: A sound knowledge of biology including taxonomy, microscopic anatomy of tissues and developmental anatomy is essential. At the end of the fall semester, the student is also expected to be able to integrate course material from microscopic and developmental anatomy with the gross anatomy.</p>

135647	Physiological Chemistry		
Subject: VET	Catalog Nbr: 102		
2013 FALL	Primary	Larry Engelking	larry.engelking@tufts.edu
<p>This course explores the biochemical basis of life from a functional perspective. Homeostatic control mechanisms governing the mammalian internal environment are examined at the cellular, tissue and organ system level, with primary emphasis placed upon key biochemical principles of protein, carbohydrate and lipid metabolism. Topics include amino acid and protein chemistry, nucleotide and nucleic acid metabolism, carbohydrate and heme chemistry, vitamins and trace elements, membranes and signal transduction, lipids and intermediary metabolism (i.e. starvation and exercise). Consideration of major biochemical pathways includes the biomedical importance each holds for respective cells, tissues and organ systems involved, a description of key regulatory reactions within each pathway, where reactions occur within respective cells, the tissue or organ specificity of the pathways, how each is controlled, the physiological situation under which each is inhibited or activated, and how pathways are coordinated so that homeostasis is maintained. Clinical examples are sometimes introduced to emphasize connections between common disease states and biochemical abnormalities.</p> <p>Required:</p> <p>Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9).</p>

135768	Animal Emergency Center
Subject: VET	Catalog Nbr: 4347
<p>Small animals and exotics on emergency. High volume practice for emergency medicine. Our Center provides the extern an excellent opportunity to "roll up their sleeves" and get actively involved in the resuscitation and care of the emergency patient. Though the majority of actual procedures will be done by the staff veterinarian or nurse, the externs have the opportunity to assist, observe, and learn innovative techniques and procedures. Emergency and critical care diagnostic, monitoring, surgical, and nutritional procedures rarely done in the practice or typical academic environment can be seen on almost a daily basis. In addition, the extern is mentally challenged by actively participating in case discussions, academic rounds, Drs./nurses cage rounds, self study programs, and a typical "question of the day". The number of externs present for any given week can vary from 2 to 3, and participate in 12 hour shifts, 5 days per week. The extern is invited and encouraged to attend weekly case conference, Grand Rounds presentations/discussions, and nurse CE meetings. Veterinary students will be evaluated based on the form provided by the university. Students can be evaluated at any level the university directs. A general list for evaluation would include: Professionalism, Punctuality, Enthusiasm, Willingness to learn, Level of basic medical knowledge and surgical skills, Ability to take histories and perform physical exams, Willing to learn about and help with all aspects of daily hospital operations. The Center is located in a 10,800 square-foot state-of-the-art facility equipped with a large waiting area, four exam rooms, two surgical suites, a large treatment room, a 40-cage ICU, isolation unit, ward runs, imaging room, lab, family/visiting room, offices, conference room, break/exercise room, and library. The hospital case load ranges from 500-1200 cases per month; primary case load by referral from area primary-care veterinarians.</p> <p>2100 W. <p>This course has two components: a). The first section of the course will cover general embryology. Topics discussed include gametogenesis, fertilization and early embryonic development (blastulation and gastrulation), implantation, and placentation among different domesticated animals. In this part of the course, basic cellular and molecular mechanisms involved in cell division, cell morphogenesis, cell-cell interaction, apoptosis, and organ development patterning will be reviewed b). The second part of the course will focus on organ development. Topics include the development of body cavities, axial and appendicular musculoskeletal system, as well as respiratory, gastrointestinal, cardiovascular, urogenital, endocrine, central nervous systems and head and neck development. Emphasis will be placed on normal development that compliments gross anatomy, and clinically important developmental defects that are important for the DVM student to understand. Mammalian fetuses and placentas will be demonstrated to the students during gross anatomy laboratory sessions. This will integrate gross anatomical and developmental aspects of the animal.</p> <p>Prerequisite: A reasonable understanding of the gross anatomy of the mammalian body is essential. In addition, a sound understanding of cell and tissue biology is desired.</p>

<p>This course is designed to enrich the student's understanding of relationships with animals and to stimulate creative thinking about the expanding horizons of human-animal interactions (HAI). Class sessions, which include a major allocation of time for student discussion, touch on a range of issues affecting companion animals, wildlife, farm animals, horses, research animals, public health, and social and cultural values regarding nonhuman individuals and communities. Students are asked to think about and discuss the broader issues of veterinary medicine, such as the role(s) of the individual veterinarian, veterinary education, and the veterinary profession. The goal of the course is to develop each student's ability to consider the diverse relationships among people, veterinarians and animals.</p> <p>Required text for course: Ethics of Animal Use, P. Sandoe and S. Christiansen, Blackwell Publishing, 2008.</p>

<p>This course, which consists of lectures and systematic dissection of the horse and a ruminant species (usually a calf or a goat), is designed to gain a comprehensive knowledge of the macroscopic anatomy of the equine and ruminant species. Clinically important anatomical differences in the Llama and the pig are also presented. The course also includes comparative anatomy of the head region of carnivores and herbivores, including the cranial nerves and the CNS.</p> <p>The objectives of the course are to understand the basic and clinical anatomy of all regions of the body, including the visceral organs of the domesticated ungulates. Innervation and blood supply to organs are stressed where they are clinically important. Major differences in equine versus the ruminant musculoskeletal system and visceral organs are discussed in relation to functional adaptation of these species. Clinically relevant and species-specific anatomical differences in the pig and llama are emphasized in lecture and laboratory sessions, in addition to addressing structural and clinical importance. The large animal component of the course requires active student participation in teaching each other.</p> <p>Prerequisite: A sound knowledge of basic anatomy of the carnivores is essential in order to appreciate the similarities and differences in large animals. The student is expected to review comparable canine anatomy before attending each large animal gross anatomy lecture and laboratory session.</p>

2014 SPRG	Primary	Samuel Jennings	Samuel.Jennings@tufts.edu
<p>This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments, neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included.</p> <p>Required:</p> <p>Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9).</p> <p>Engelking, LR: METABOLIC AND ENDOCRINE PHYSIOLOGY, 3rd ed, 2012, Teton NewMedia, Jackson, WY.</p>

<p>This course is presented to first year students to help them develop a better understanding of the basics of prokaryotic and eukaryotic molecular biology and of how molecular biology is utilized in veterinary medicine. During the course we review gene structure, gene replication and function as well as recombinant DNA technology. Topics include the genetics of animal assembly, generating transgenic animals, therapeutic and reproductive cloning, gene therapy, biotechnology and conservation. We address the scientific and ethical questions raised by some of these technologies.</p>

<p>This course provides the fundamentals of different imaging modalities (radiography, CT, MRI, and ultrasound), and their application towards normal anatomy of dogs, cats, and horses. The first half of this course is devoted to image formation, radiation safety, image interpretation principles, imaging artifacts, and indications of the different imaging modalities. The second half of the course covers the normal anatomy of clinically relevant structures using different imaging modalities. The course serves as a foundation for the radiology and ultrasound courses during the second and third years of the curriculum.</p>

136324	General Pathology		
Subject: VET	Catalog Nbr: 122		
2014 SPRG	Primary	Jeremiah Lyons	No Email on file.
<p>The principal objective of this course is to acquaint students with the causes of disease, the fundamental, shared mechanisms by which diseases are provoked in various species, and the relationship between altered cellular and tissue structure and function. Major areas of study include cell injury, control of cell growth, acute and chronic inflammation, metabolic disease, circulatory disturbances and neoplasia. This introductory course is designed to provide the appropriate basic science background for understanding and interpreting disease patterns in a clinical setting, as well as to give a working knowledge of the terminology used to describe diseases. The laboratories are designed to help students apply the concepts learned in didactic lecture to practical cases involving animal disease.</p>

136711	Comparative Anatomy and Physiology
Subject: VET	Catalog Nbr: 134
2014 SPRG	Primary
Maureen Murray	maureen.murray@tufts.edu
As an endeavor, comparative anatomy is fundamentally a study of adaptation and evolution. Thus we will emphasize the structural and functional similarities among vertebrates and reinforce how important it is for veterinarians to be able to use their knowledge to extrapolate among species and taxonomic groups. Lectures will include an introduction to the functional anatomy and physiology of major vertebrate taxa (fish, amphibians, reptiles, birds and mammals). Emphasis is be placed on: clinically relevant topics, species which graduates are likely to encounter, areas in which the taxa vary dramatically from their domestic animal counterparts and issues (e.g., cardiovascular anatomy) which may contribute significantly to students' understanding.

In 1994, Dr. Robert J. Orsher opened the doors to the Veterinary Specialty and Emergency Center (VSEC), a 24-hour multi-specialty referral and emergency small animal hospital in Bucks County, Pennsylvania. His goal for this veterinary specialty hospital was to bring board-certified specialists from multiple disciplines under one roof to practice as a cohesive team.

Veterinary specialists in cardiology, dermatology, diagnostic imaging, emergency & critical care, holistic medicine & acupuncture, internal medicine, neurology/neurosurgery, oncology, surgery and radiation oncology have joined together to actualize Dr. Orsher's vision. VSEC offers leading-edge medicine while working closely with pet owners and their referring veterinarians to ensure the highest level of communication and care.

<p>This course reviews the roles of veterinarians in global development and the contribution of our profession to "One Health". It provides an overview of the roles of animals in the world's various environmental, economic and demographic contexts. The ecological foundations of the major animal production systems are explained. Disease constraints to production and commerce are reviewed. The structure and function of animal health services are correlated with economic and social structures. Emphasis is placed on the development of socially, environmentally, technically and economically sound solutions to livestock and wildlife related problems in the developing world.</p> <p>Specific topics include global animal management and production systems, the role of veterinary medicine in a global economy, delivery of veterinary services in developing countries, wildlife disease and ecological health, disaster medicine, livestock programs in humanitarian crises and global environmental conventions. Every lecture will include a "disease of the day", chosen because of its international importance, and relevance to the overall theme. The course concludes with discussions about the view from the United States, where students see the connection between overseas issues and their own future practice.</p>

2013 FALL	Primary	John Hurley	John.Hurley@tufts.edu	
2014 SPRG	Primary	Angeline Warner	angie.warner@tufts.edu	
2014 SPRG	Primary	Sandra Ayres	sandra.ayres@tufts.edu	
2014 SPRG	Primary	Joyce Knoll	joyce.knoll@tufts.edu	
2014 SPRG	Primary	Christopher Pirie	Chris.Pirie@tufts.edu	
<p>The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.</p>

This course provides an overview of veterinary neuroanatomy, pathobiology of neurological diseases, and clinical neurology. Neuroanatomic structures and pathways are discussed with a functional emphasis so that the student develops an understanding of how and why nervous system lesions produce neurological dysfunction. The response of the nervous system to injury and the pathogenesis of common small and large animal neurological diseases will also be covered in this course. The clinical manifestations of these diseases and the neurodiagnostic tests utilized to identify specific disorders will then be presented. The goal of this course is to provide the student with the necessary skills and information to be able to neuroanatomically localize lesions, formulate a differential diagnosis for that localization, understand the pathogenesis of these differentials, and interpret diagnostic tests used to rule in or rule out specific neurological disorders. Knowledge of neurological principles provided in this course has direct application to the practice of clinical neurology and neuroscience research.

<p>This course introduces general principles of pharmacokinetics, pharmacodynamics and therapeutic applications of various drug groups. The course is divided into four sections: 1. General pharmacology, 2. Neuropharmacology (CNS and automatic drugs), 3. Chemotherapy (antimicrobials, antifungal and antiparasitic drugs) and 4. Other drug groups (antineoplastics, anti-inflammatory agents, glucocorticoids, anabolic steroids, antihistamines, ruminant pharmacology). The major emphasis of this course is the mechanism of action of various drug groups, how pharmacokinetics and pharmacodynamic concepts are applied to rationalize drug therapy and how to attain maximum therapeutic benefits with minimal risks.</p>

<p>Hoofstock, Carnivores, Birds. The preceptorship emphasizes field immobilization techniques, preventive medicine, conservation oriented research, and an international perspective. Activities will include assisting in day to day care and treatment of animals, being familiar with and keeping up record systems, assisting with in-house laboratory work and necropsies. All of the above will require researching aspects of anatomy, physiology, behavior, nutrition, etc.. That make each species unique. Upon completion, a critique of the program is requested from each student. Above all, independent through, involvement, and innovation are encouraged. Duration: 5-6 weeks Will Provide: Housing 4th year only, CV, letter of intent, and the names, addresses and phone numbers of 2 references. P.O. Box 2189, Glen Rose, TX 76043 Telephone: (254) 897-2960</p>

<p>This course is designed to give the student an overview of genetics as it pertains to clinical veterinary medicine. Students are expected to have a background in basic Mendelian Genetics and will use this knowledge in solving genetics situations faced by the large and small animal practitioner. The role of the veterinarian in genetic counseling for owners and breeders of purebred and mixed-breed animals is emphasized. The course covers genetic counseling, genetic disease control, population genetics, breeding systems, critical evaluation of data, pedigree analysis and clinical applications of molecular genetics.</p>

This course introduces students to Changes in the structure and function of the respiratory system under pathological conditions. Diagnostic techniques for respiratory system evaluation, including imaging and obtaining samples for cytology and cultures, are discussed. Emphasis is placed on the role of respiratory pathogen defense mechanisms and their defeat by host-adapted respiratory bacteria and viruses. Common mechanisms of respiratory tissue injury and the pathogenic organisms that injure various components of the respiratory system are discussed. Common diseases of the respiratory system in companion animals, cattle and small ruminants, horses, and laboratory animals are covered in detail. The causative agent, pathological changes, and clinical progression for each of these are emphasized.

137633	Epidemiology and Biostatistics		
Subject:	Catalog Nbr:		
VET	216		
2013 FALL	Primary	Joann Lindenmayer	Joann.Lindenmayer@tufts.edu
<p>The Biostatistics and Epidemiology course will help students to integrate a basic understanding of biostatistics into their clinical and research training, thereby improving the health of animals in their care and the quality of their research. The course focuses on understanding concepts rather than performing calculations. Beginning with patient care in the clinics, the course progresses to the importance of descriptive statistics, then to inferential statistics for clinical research and concludes with inferential statistics applied to animal populations and field research. Biostatistical themes will be emphasized so that students will develop a framework for understanding measures not covered in class. At the end of the course students will be able to read and understand the design and conduct of a majority of articles in the veterinary medical clinical literature, and will be able to design a simple research study.</p>

137660	Avian & Exotic Clinic of the Monterey Peninsula
Subject: VET	Catalog Nbr: 4576
<p>100% avian/exotic practice (including approximately 15% public instructions - Monterey Bay Aquarium) Private practice seen exclusively avian and exotic species. A relatively large native species caseload is also seen. The facility is occupied by a small animal emergency clinic which may be able to provide some exposure for the student. 100% avian/exotic practice dealing primarily with pet animals, however, some avicultural and herputocultural clients are seen. Provides veterinary support for two local wildlife rehabilitation centers. Part time vet care at Monterey Bay Aquarium.</p> <p>Will Provide: Housing 451 Canyon Del Rey Blvd, Del Rey Oaks, CA 93940 (831) 647-1147</p>	

137664	Anatomical Preparations Selective
Subject: VET	Catalog Nbr: 1001
<p>In this selective students will learn a variety of techniques for preparing anatomical specimens for teaching and display purposes. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying of hollow viscera, and corrosion casts of bronchial and vascular systems. Students will also learn about the techniques of plastination. Individual projects are encouraged.</p>	

137665	Law and Veterinary Medicine
Subject: VET	Catalog Nbr: 218
<p>This course seeks to enable students to navigate, and otherwise appreciate the importance of, the legal aspects of the practice of veterinary medicine, including contract law, employment law, legal consequences of ethical choices, legal consequences of medical choices - negligent or otherwise, applicable administrative, civil, and criminal procedural structures and issues, and the applicable regulatory and statutory schemes with which veterinarians - as veterinarians, business owners, or employees - will need to contend. Students will consider both basic and advanced issues of law, and also more specific materials, including actual case studies, in order to challenge the students to inquire always about, and otherwise determine, the legal needs and ramifications of their chosen profession, and begin to make students aware of the spectrum of practice requirements. Guest speakers are scheduled, who are trained exceptionally in a particular aspect of Veterinary Law.</p>

Subject: VET	Catalog Nbr: 1024
<p>Tuition based course offered for six weeks during summer months (1 credit). This off-campus selective, held in Florida and Kenya, offers students a chance to study the broad range of issues that affect wildlife and ecosystem health, both terrestrial and aquatic, in industrialized and developing country contexts. This selective provides six weeks of intensive lecture, laboratory and field experience while highlighting the transdisciplinary, cooperative nature of work required for effective wildlife and ecosystem research, management and long-term problem solving. Envirovet faculty are recognized leaders in their fields and opportunities exist for students to explore various career options. Topics include global environmental threats, ecological health, biodiversity conservation, ecosystem management, emerging disease and the challenges inherent in meeting the needs of stakeholders in varying locations with different political and economic motivations. Throughout the program, students will learn how to employ new tools from information technologies, health sciences, landscape analysis, ecological risk reduction, ecosystem economics and methods for consensus building. These tools should help enable students to identify, prioritize and solve environmental problems and conduct effective environmental action planning, implementation and research.</p>

Course Bulletin

137948	Cape Wildlife Center
Subject: VET	Catalog Nbr: 4624
<p>Cape Wildlife located on a 5 acre preserve adjoining the Great Salt Marsh in West Barnstable. The Center provides veterinary medical and surgical care to injured, ill and orphaned wildlife. The Center also coordinates with local and staff wildlife rehabilitators to raise orphaned wild animals for release back to the wild. Under the supervision of the veterinarian and staff students will observe and may participate in medical care of native wildlife, as well as learn about and participate in the various tasks involved in properly caring for and raising orphaned young and recovering adult native species. There may also be an opportunity to learn about and observe surgery and holistic health care modalities such as acupuncture, chiropractic and homeopathy. Species presented to the clinic include, but are not limited to, raptors, songbirds, waterfowl, shorebirds, raccoons, squirrels, rabbits, turtles, and snakes. Daily assignments may include assessments and treatments, cleaning and feeding of ongoing cases as well as daily admissions and workups of new cases. There will be supervised participation expected in laboratory workups, radiographic assessments and medical care of cases. Each student will also be learning aspects of husbandry of wildlife in the clinical and rehabilitative settings. The responsibilities that an extern will be involved with will depend on his or her knowledge, experiences, background and goals. A highlight for every student is seeing an animal that came into the clinic ill, debilitated, orphaned or injured released back into its native environment healed and strong. Every effort will be made to ensure that each student has the opportunity to participate in at least one release if the cases so allow. All students are expected to participate in daily cleaning, feeding, diet preparation and laundry tasks. There will be time off scheduled for each student.</p> <p>Housing: There is limited site housing available. The bedrooms are set up dormitory style with 1 to 4 students per room. There will be a small fee of \$15 per week charged to students staying at the facility to help defray the utility and upkeep costs of the available housing. We ask that students send a check to cover the cost of their accommodations prior to their arrival. Partial weeks may be paid as \$2.50 US per day. This fee may be waived in special circumstances, but must be approved prior to arrival.</p> <p>4th year only, transcript; resume of training, education and/or experience related to the field of veterinary medicine; resume of training, education and/or experience related to the field of wildlife rehabilitation. Students for whom English is a foreign language must also submit a copy of their TOEFL or equivalent scores. Please list three preferred dates (3 week minimum) and also describe your interest in an externship at the Cape Wildlife Center.</p> <p>185 Meadow Ln, West Barnstable, MA 02668 Telephone: (508) 362-0111 Fax: (508) 362-0268</p>

138018	Greening Veterinary Medical Practice
Subject: VET	Catalog Nbr: 1035
<p>This is a continuing research project to identify ways veterinary medicine can reduce it's environmental impact through economical alternatives to traditional practices. Each semester, selective students will pursue investigations that will lead to recommendations for alternatives in veterinary practice. Develop an inventory of all items used in the Tufts Wildlife Clinic. Work with Carolyn Corsiglia and Dr. Kaufman. For each item identify annual costs, number of units used, what the item is used for, who uses the item, fate of the item (general waste, biohazard waste, recycled), environmental impact of each item. Identify alternatives already in use and assess the effectiveness of those items. Rank items in order of greatest to least number items used entering the waste stream. Using sources such as Sustainable Hospitals investigate alternatives for each item including economic impact, labor required, accessibility, overall effect in reducing environmental impact (from source and use to disposal). Develop report including data found, alternatives already in use and recommendations for potential changes in practice. Report will be presented to the Greening the Grafton Campus Committee.</p>

138095	Veterinary Referral and Emergency Center
Subject: VET	Catalog Nbr: 4655
<p>The Veterinary Referral & Emergency Center would like to announce its externship (preceptorship) program. We are a 24 hour state-of-the-art referral and emergency center located in southwestern CT. Our 2-year-old, 12,000 square foot hospital is fully equipped for all types of surgical and medical cases. Diagnostic capabilities include a complete in-house lab, blood gas machine, video endoscopy, ultrasound, color flow doppler echocardiography, telemetry, CT Scan, and x-ray. Our specialists cover the fields of dentistry, dermatology, internal medicine, neurology, oncology, ophthalmology, and surgery. Externs can expect "hands on" training in our busy practice. Cage side rounds are conducted twice daily and didactic rounds are offered each week. Rotations through any or all of the specialties (including emergency) are encouraged. Arrangements can be made for any length of time and can be made to accommodate individual requirements. Housing: As a part of our externship program, we can provide housing at no cost to students either on site or one of our general practices. Applicants are taken on a first come first serve basis. We try to limit our program to one student at a time.</p>

138125	Lead, Health and the Environment
Subject: VET	Catalog Nbr: 1046
<p>Lead (Pb) is cheap and there is a long tradition of its use in almost all facets of society. But the toxic effects have been recognized for many years. As a result, society has greatly reduced some uses of Pb, including some paints, gasoline and solders because of threats to animals, people and the environment. Despite this, a wide variety of Pb products are currently available and many animals and people suffer from their toxic effects. In this self-directed selective, students will review the current state of knowledge on the toxicity of lead and its behavior in the environment. Each student will undertake a project designed either to compile and analyze information about lead, or to develop educational materials aimed at different stakeholders and/or interest</p>

We are a full service, private veterinary hospital responsible for the medical and surgical care of our guide dogs and guide dogs in training. We are equipped with ultrasound, endoscopy, radiology and surgery.</p> <p>Housing/Meals: With advance notice may be able to provide housing and meals.</p> <p>Resume</p> <p>611 Granite Springs Road, Yorktown Heights, NY 10598</p> <p>Telephone: (914) 243-2223</p> <p>Fax: (914) 245-7846</p>	

138342	Banff National Park Wildlife Laboratory
Subject: VET	Catalog Nbr: 4712
<p>Type: North American wildlife, exotic wildlife (intermittent work at Calgary Zoo) The externship at the BNP Wildlife Laboratory will include active participation in the disease surveillance of key species within the park, which may include elk, mule deer, whitetail deer, wolves, cougar, grizzly and black bears. The surveillance program requires extensive cooperation with other wildlife managers in the park and would give the student experience in immobilization/capture techniques of multiple species; handling of large carnivores and herbivores; physical examination and sample collection; necropsy techniques and lesion identification; and parasitology of wildlife species. Opportunities also exist for participation in ongoing wildlife monitoring projects of migrating waterfowl (Harlequin ducks) and for assistance with the clinical assessment and care of a variety of exotic species at the Calgary Zoo. The Calgary Zoo offers a wide variety of experiences for the students, including clinical assessment, treatment and surgery of mammals, amphibian, reptiles and bird (over 900 species in collection).</p> <p>Wildlife Laboratory, Banff National Park, Banff, Alberta Canada</p> <p>Telephone: (403) 762-5339</p> <p>Fax: (403) 762-3240</p> <p>todd_shury@pch.gc.ca</p>	

138345	Pets Are Wonderful Support (PAWS)
Subject: VET	Catalog Nbr: 4713
<p>The PAWS (Pets Are Wonderful Support) Veterinary Internship Program is a 1 month internship at the PAWS</p>	

Course Bulletin

San Francisco office. The objectives of this program are to educate future and current veterinarians about the significance of the human-animal bond, promote public health via education on the health benefits and risks of animal companionship, and provide experience with the operation of a community-based, non-profit organization. In addition to engaging in an educational project at the PAWS office and participating in the Food Bank, students have opportunities to participate in field days with Vet SOS mobile veterinary services to homeless camps in San Francisco and Pets Unlimited, a non-profit animal hospital and community partner of PAWS. In the past, interns have assisted with: * initiating a pilot study on the diversification of PAWS' client base * developing the PAWS Safe Pet Guidelines, which published and presented valuable information on the risks of zoonotic diseases to both the general public and health professionals. *creating the Health Benefits of Companion Animals brochure which documents the top scientific health benefits research. Students in their 3rd and 4th years preferred. One to two internship students are selected yearly based on their letter of interest, background/C.V., and letters of recommendation. Internship possibilities are available in the Spring, Summer and Fall, A stipend of \$1000.00 is provided to cover travel and other miscellaneous expenses. PAWS is not able to guarantee housing.

Stipend: \$1,000.00 for travel and expenses. website: www.pawssf.org

138363	Lilly Research Laboratories
Subject: VET	Catalog Nbr: 4718
<p>Lilly Research Laboratories is proud to announce the availability of an externship in veterinary pathology and laboratory animal medicine. Successful applicants will gain valuable experience in pathology and laboratory animal medicine, and develop a better understanding of the science of drug development. The objectives of this educational opportunity are to provide students with an experiential rotation in Veterinary Pathology and Laboratory Animal Medicine and to develop a broad overview of the many opportunities for employment of veterinarians within the pharmaceutical industry. Externs will work in Greenfield and Indianapolis facilities and will experience the process of pharmaceutical drug development from discovery research to clinical trials. Within the pathology department, externs will participate in investigative pathology, biomarker development, nonGLP studies, and nonclinical drug safety assessment. Externs will be expected to interact with members of the Clinical Pathology, Histology and Necropsy Management teams. In the Laboratory Animal Medicine, externs will work closely with laboratory animal veterinarians and staff as they interact with pathologists and other Lilly scientists in various aspects of the drug development process. Externs will have opportunities to work with veterinarians and other Lilly scientists in Discovery Research, Department of Adsorption-Distribution-Metabolism and Excretion, and ELANCO (Lilly's animal health pharmaceuticals company). A small amount of flexible time will be arranged so that the extern may choose to spend additional time in an area of interest. The duration of the externship is 3-4 weeks depending on the individual university</p>	

Course Bulletin

schedules.

Eli Lilly and company will provide a generous stipend at the completion of the externship period that may be used to supplement the following expenses: housing while in Indianapolis area, travel to and from Indianapolis, meals, and rental car. If necessary, direct billing of some expenses may be arranged for the convenience of the extern.

Application materials are contained on the website [<https://www.scienteur.com>]. To apply, please visit the Scienteur website and register as a "Provider." Print and complete the application form and provide the required materials listed in the application check-list. There is no fee for application. Send the completed application packet to the following address: Externship in Veterinary Pathology and Laboratory Animal Medicine, c/o D.L. Craig, Lilly Research Laboratories, (address continued above). This externship is awarded on a competitive basis. Application packages should include a completed application form, current CV, university transcript, letter of intent that describes related work experiences and future employment intentions, letter of reference from the student's academic advisor, and one personal reference from an individual who is familiar with the applicant. Eli Lilly and Company advises that applications be sent to the address by March 30. Successful applicants will be notified as soon as possible. Successful applicants need to provide written proof of health insurance and results of tuberculosis testing, and will also be required to submit to drug testing and background checks prior to the externship period. The applicant and university will be required to sign confidentiality agreements prior to the externship period.

138411	Aquamed - Louisiana State University
Subject: VET	Catalog Nbr: 4732
<p>The Gulf States Consortium of Colleges of Veterinary Medicine at Auburn University, Mississippi State University, Louisiana State University, Texas A&M University, and the University of Florida offers a four-week aquatic animal pathobiology course, AQUAMED, annually. The objective of AQUAMED is to impart an understanding of health management techniques and pathological processes relating to the etiology, diagnosis, and treatment of important aquatic animal diseases. Ornamental fish, commercially important fin fish, and shellfish will be emphasized. An overview of reptiles, marine mammals, and aquatic laboratory animals will be presented. Nationally and internationally recognized individuals will present topics relating to culture, maintenance, and health care of aquatic animals. Class size will be limited in order to allow maximum hands-on activities. Weeks 1-3 will be held at the Louisiana State University School of Veterinary Medicine. Week 4 will be conducted at the Louisiana Universities Marine Consortium (LUMCON) facility in Cocodrie, LA. Please see website for further details. Baton Rouge, LA 70803 Telephone: (225) 578-9680 Fax: (225) 578-9701 thune@vetmed.lsu.edu</p>

138637	Physiology
Subject: VET	Catalog Nbr: 110
<p>This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and</p>	

Course Bulletin

anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments, neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included.

138638	Clinical Skills I
Subject: VET	Catalog Nbr: 105
This course introduces students to the handling and examination of cats, dogs, cattle, horses, llamas, goats and sheep. Emphasis is put on aspects of behavior important to the restraint, handling and examination methods. Students will also learn basic examination methods, common breeds and pertinent lay terminology relating to husbandry.	

138639	Problem Based Learning II
Subject: VET	Catalog Nbr: 130
The principle objective of this course is to promote self-directed learning using clinical cases to enhance the students understanding of biochemical, physiological, and pathophysiological mechanisms and principles taught in lectures. The small group sessions are also intended to help students develop communication skills, cooperative behaviors, data base searching skills, and the ability to provide and receive constructive criticism	

Course Bulletin

concerning their critical thinking and interactive skills.

138640	Adopt A Veterinary Student
Subject: VET	Catalog Nbr: 132
<p>The objective of this program is to introduce students to the animal handling, husbandry practices and management approaches of various animal operations. The intent is to increase the skills and awareness of students with respect to the animal species with which they will be increasingly involved during the course of their veterinary education. The students are required to complete 2 days at an assigned farm or barn before the determined deadline.</p> <p>This course meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

138642	Clinical Skills II
Subject: VET	Catalog Nbr: 208
<p>This course is designed to give the student an overview of genetics as it pertains to clinical veterinary medicine. Students are expected to have a background in basic Mendelian Genetics and will use this knowledge in solving genetics situations faced by the large and small animal practitioner. The role of the veterinarian in genetic counseling for owners and breeders of purebred and mixed-breed animals is emphasized. The course covers genetic counseling, genetic disease control, population genetics, breeding systems, critical evaluation of data, pedigree analysis and clinical applications of molecular genetics.</p> <p>This course meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

138643	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
2014 SPRG	Primary
Armelle De Laforcade	armelle.delafordade@tufts.edu
<p>The objective of this course is to give students an introduction to how the small and large animal hospitals, Grafton campus farm and ambulatory service in Woodstock, CT operate. The experience is primarily observational. The student will "shadow" a fourth year student to obtain an insight into the process of medical diagnosis and treatment of diseases. Throughout the year, students will spend a total of one full day in the large animal hospital, one full day in the small animal hospital, one night in the emergency room, one full day on the ambulatory service and one half day (spring semester) at the farm. In addition, students will be assigned to spend either ½ day in anesthesia, or ½ day in wildlife. The goal will be for students to complete a physical examination of a clinical patient during each rotation. In addition, students will be paired with a fourth year student to participate in 2 treatment shifts in the wards over the course of the year. The purpose of treatment shifts is for students to become acquainted with treatment sheets, medical orders, and animal restraint. No textbook is needed for this course. A single short introductory session for the entire class is held before the rotations start. A handout with the required information is available in TUSK.</p>	

Course Bulletin

138644	Transfer Credit
Subject: TRAN	Catalog Nbr: 9999

138645	Radioanatomy and Working Principles of Medical Imaging
Subject: VET	Catalog Nbr: 113
<p>This course provides the fundamentals of different imaging modalities (radiography, CT, MRI, and ultrasound), and their application towards normal anatomy of dogs, cats, and horses. The first half of this course is devoted to image formation, radiation safety, image interpretation principles, imaging artifacts, and indications of the different imaging modalities. The second half of the course covers the normal anatomy of clinically relevant structures using different imaging modalities. The course serves as a foundation for the radiology and ultrasound courses during the second and third years of the curriculum.</p>	

138646	Veterinary Histology
Subject: VET	Catalog Nbr: 136
<p>The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.</p>	

138668	Emerging and Exotic Diseases
Subject: VET	Catalog Nbr: 241
<p>The Emerging and Exotic Diseases of Animals (EEDA) & Initial Accreditation Training (IAT) course is an on-line self-paced course. This course is designed to provide students with a fundamental understanding of 1) How to recognize the majority of EEDA; 2) The role of the veterinary profession in preventing, detecting, and responding to incursions of EEDA; 3) The role of the OIE, USDA, federal and state governments in responding to EEDA; and 4) The impact EEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation.</p>

Subject:	Catalog Nbr:			
VET	342			
2014 FALL	Primary	Claire Sharp	Claire.Sharp@tufts.edu	
<p>The course is intended to promote self-directed learning. Clinical cases are provided to develop and demonstrate the interrelations between pathophysiology, nutrition, pharmacology, public health, ethics, client and professional relations in the clinical setting. The small group sessions are intended to foster the development of collegial and cooperative learning, effective communication, the ability to give and receive feedback and clinical judgment. The facilitator encourages critical thinking, model appropriate methods of investigation and use of data and the skills necessary for effective functioning in clinical settings.</p>

All doctors and staff are highly trained in the latest medical techniques for equine care. More important is the entire staff's total commitment to the care and comfort of individual patients. The successful recovery of many of our hospital patients relates directly to the excellent medical and nursing care provided by this team effort. Direct communication between clients and doctors is an important and unique feature of our practice. We believe a well informed owner greatly contributes to the quality of the medical care we are able to provide to our patients.

As part of our commitment to providing the highest quality medical care possible for our patients, we provide a qualified equine practitioner on emergency call after regular hours, Sundays and holidays throughout the year, and can provide hospitalization and 24 hour intensive care for critical medical and surgical cases at any time of the day or night.

<p>If your companion animal requires the services of a veterinary medical specialist or is in need of urgent medical care, Fifth Avenue Veterinary Specialists can help. Our advanced care resources are second to none.</p>	

Course Bulletin

Come in at any time for emergency care or contact your veterinarian about a referral for a specialist.

Fifth Avenue Veterinary Specialists provide a variety of state-of-the-art care including services such as complex orthopedic surgery, interventional cardiology, endoscopic and laparoscopic procedures, advanced critical care monitoring and a full range of diagnostic imaging such as echocardiography, ultrasonography, and CT scan.

At the heart of Fifth Avenue Veterinary Specialists' advanced care services are our board-certified veterinary specialists. Our specialists have extensive additional training in such fields as internal medicine (including infectious disease, hematology, and pulmonology), minimally invasive surgery, cardiology, ophthalmology and anesthesia and pain management. In many cases our specialists work as a team to provide the absolute best care for your pet, and continue to consult with your regular veterinarian even after your animal has left the hospital. We are open 24 hours a day, every day of the year and are always here if you need us.

Our mission is to provide the highest quality veterinary healthcare for our clients' beloved pets. We will provide this care in a professional manner with a compassionate, personal touch. We resolve to continually earn the respect and trust that our clients have placed in us in every visit.

Our hospital provides quality pet care, with a personal touch, to our clients and their pets. With over 60 years combined experience, our knowledgeable and caring veterinarians emphasize total pet health and wellness throughout the lifetime of every pet. We pride ourselves on our compassionate and professional staff that treats our client's pet as if they were their own. We are committed to educating clients about their pet's health as they develop and grow, into their senior years, as well as when sickness or injury occur. We are here to service our clients and their 4-legged family members as extensions of our own family.

Subject: Catalog Nbr:
VET 5201

The Farm Animal Service within the veterinary academic hospital, provides a medical, surgical and reproductive diagnostic and treatment service for cattle, llamas, goats, sheep, pigs and ratites on an individual or group basis.

Diagnostic information is extended to the on farm situation in order to improve the care and productivity of farm and ranch animals.

The goal of the service is to provide a top class service to the agricultural community through the application of new knowledge and at the same time provide meaningful teaching opportunities for veterinary students. The University of Tennessee Large Animal Teaching Hospital is a modern, very well equipped facility with many diagnostic and therapeutic possibilities.

Mission Statement: Farm Animal Medicine & Surgery

To advance the practice of Farm Animal Medicine & Surgery by promotion of Scholarly activity, education and maintenance of animal health through innovative teaching, research, and clinical service.

139709	U.S. Navy Marine Mammal Program
Subject: VET	Catalog Nbr: 5229
<p>The Veterinary Medical Externship is designed for veterinary students, preferably during their senior level or fourth year at an accredited veterinary college. Four students are selected each year to participate in the 4-6 week externship; only one student is on-site at a time. During this time, they are given the opportunity to observe and participate in various clinical activities under the direction of the veterinary staff. In addition, they are expected to select and complete a clinical project in marine mammal medicine during their stay. The internships are voluntary, and students are responsible for their own transportation and housing arrangements. Students must be U.S. citizens in U.S.-accredited schools within the United States.</p> <p>Students interested in the Animal Care and Training internship are encouraged to send a resume, letter of intent including career goals and reasons for wanting the internship, an unofficial or official copy of their transcripts, proof of medical insurance, proof of U.S. citizenship, and a minimum of three letters of recommendation from professors or employers to the address below.</p> <p>Students interested in the Veterinary Medical Externship should also send a letter to the address below. This letter should include reasons for wanting to participate in the program and dates of availability. It is recommended that applicants list at least three prioritized availability dates. In addition, students must submit a curriculum vitae, two letters of reference, and proof of U.S. citizenship.</p> <p>Attn: Coordinator of Volunteer Opportunities Space and Naval Warfare Systems Center Pacific, Code 71510 53560 Hull Street San Diego, CA 92152</p> <p>Or fax it to (619) 553-2678.</p> <p>For further information about any of the Navy Marine Mammal Programs internships, please send an email to nmmp_intern@spawar.navy.mil.</p>

139711	Tambopata Macaw Project
Subject: VET	Catalog Nbr: 5231
<p>The Tambopata Macaw Project is a long term research project on the ecology and conservation of macaws and parrots in the lowlands of southeastern Peru under the direction of Dr. Donald Brightsmith of the Schubot Exotic Bird Health Center at Texas A&M University.</p> <p>The Tambopata Macaw Project has been working with wildlife and local communities since 1989. A long history of dedicated research and monitoring has provided many insights into various aspects of parrot and wildlife of south eastern Peru. We are always looking to collaborate with anyone with a passion for conservation and biology. We have supported many national and international students and look forward to hearing from you should you wish to participate in our project or conduct your studies with our support.</p> <p>Tambopata is a unique forest environment, with the highest concentrations of avian clay licks in the world. A range of animals come to satisfy their need for salt along the river banks of the region. The experience of hundreds of macaws at a claylick is one of the world's ornithological highlights. The Tambopata faces imminent threat from the paving of a highway through one of the planet's most biodiverse regions. We need all the help and assistance we can get to try and understand what the impacts may be for one of the forests major icons.</p> <p>This site has been designed to explain research being undertaken, to provide public access to reports and publications about our macaw research and for anyone who is interested in the project and is thinking of taking part.</p>

VET 5235

Our Zoological Medicine service provides medical and surgical care to exotic animals, including privately owned exotic pets, animals in public zoological parks and aquariums, and limited types of wildlife.

Animals we commonly treat include rabbits, ferrets, guinea pigs, chinchillas, sugar gliders, rodents, birds, reptiles, amphibians, fish, spiders, and scorpions.

We are fully integrated into the Veterinary Teaching Hospital, which means we have access to all of the state-of-the-art equipment and expertise in all of our specialty areas, such as Anesthesia and Pain Management and Diagnostic Imaging. This allows us to provide comprehensive care for your animal.

Subject: VET	Catalog Nbr: 5239
<p>Rose Hill Veterinary Practice was founded in 1998 with the goal of providing full-service care to all animals in a previously underserved portion of the Virginia Piedmont. With headquarters in Rappahannock County, the practice has grown to include two full-service facilities. The Large Animal Practice started in 1998 as a solo ambulatory practice and now has three veterinarians providing full-service, farm-to-farm care. In 2006, we opened a treatment facility for our Large Animal practice that allows a greater depth of care and houses some of the most advanced equipment and services available.</p> <p>In 2003, we opened our full-service Small Animal Clinic where our clients also enjoy a dedicated staff that provides the most in-depth care with the most advanced equipment in the region. Our two veterinarians provide high quality medicine and surgery in a quiet, relaxed environment where both the patient and the owner can enjoy their visit. Our support staff is among the most experienced, talented and compassionate within our profession.</p> <p>Whether you have a large farm operation that needs a veterinarian or you have a tiny kitten that needs care, Rose Hill Veterinary Practice, P.C. has the tools and the trained staff to assure a positive experience for all. We are all dedicated to providing quality client service in a friendly and professional manner.</p> <p>Rose Hill Veterinary Practice PC Large Animal Clinic 21A Christmas Tree Lane P.O. 139839	Dumb Friends League
Subject: VET	Catalog Nbr: 5250
<p>When our organization was founded in 1910, it was named after a London, England, animal welfare group called "Our Dumb Friends League." In those days, the term "dumb" was widely used to refer to animals because they lacked the power of human speech. Today, the Dumb Friends League, headquartered in Denver, is the largest community-based animal welfare organization in the Rocky Mountain region—providing a strong and steadfast voice for those who cannot speak for themselves.</p> <p>As part of a compassionate community, we:</p> <ul style="list-style-type: none"> •Rescue sick, injured and neglected animals •Investigate cases of cruelty and abuse •Provide shelter, veterinary care, and behavior and training programs to homeless companion animals and horses •Adopt homeless pets and horses to new homes •Reduce pet overpopulation through mobile spay and neuter projects in underserved areas •Offer learning opportunities for the public to keep more pets in homes •Educate children and adults about animals and their needs <p>2080 S Quebec St, Denver, CO 80231 (303) 751-5772</p>	

139840	Veterinary Specialist Group
Subject: VET	Catalog Nbr: 5251
<p>Veterinary Specialist Group is a facility dedicated to providing the highest standard of care for surgery, medicine and radiology patients. Our team of specialists and support staff work together to provide tailor-made diagnostics and treatments for each individual patient.</p> <p>The hospital provides hands on training for veterinary nursing students and applied science students undertaking their study at Unitec and for veterinary students who wish to see specialist practice.</p>	

Course Bulletin

The hospital and staff are a continuing education resource for veterinarians in the Auckland area and beyond. Regular seminars provide veterinarians with a forum for presenting and receiving up-to-date veterinary information.

The staff at VSG® attend various conferences and seminars within New Zealand and overseas to continue to keep up with the latest ideas and techniques from around the world. VSG® also host veterinary specialists from overseas to provide continuing education to veterinarians within New Zealand.

Subject: VET	Catalog Nbr: 5266
<p>The Great Plains Veterinary Educational Center (GPVEC) provides education to veterinary students and practitioners through a cooperative agreement between Iowa State University, the University of Nebraska, and the U.S. Meat Animal Research Center (USMARC). The teaching program is primarily in the food animal health and production management of beef cattle. Large livestock populations are available at the USMARC which serve as a major teaching resource, allowing students to participate in routine individual animal health care as well as specific herd activities that are part of the yearly livestock production cycle.</p> <p>The GPVEC also provides numerous quality continuing education seminars to practicing veterinarians and livestock specialists. To promote the veterinarian-producer partnership concept, producers are welcome to join their veterinarians at many of the seminars.</p> <p>The Production Medicine Residency Program available at the GPVEC for veterinarians with two or more years of food animal practice experience provides in-depth interdisciplinary training in beef production and economics. Veterinary graduate students may complete a distance MS through this program. P.O. Box 148, 820 Road 313, Clay Center, NE 68933 402-762-4500</p>

<p>PHS/SPCA is a private, independent, non-profit, and much more than a no-kill shelter. We've rehomed 100% of the healthy dogs and cats in our care since 2003 and promise to do this going forward. While rewarding, this isn't our most challenging work and doesn't define us. We accept our community's sick, injured, abused,</p>	

Course Bulletin

unwanted, stray, neglected and older animals; donations to our Hope Program enable us to help and rehome approximately 200 every month. (Sadly, private shelters in many communities never give them a chance). We rehabilitate wildlife, make spay/neuter free for our low or fixed-income residents, educate children, and investigate animal cruelty. PHS/SPCA is one of the few shelters in the entire state accredited by the American Animal Hospital association and we're a gold-level GuideStar Exchange participant (click the seal below to access our GuideStar nonprofit report). Most important, we've earned our community's trust, involvement and support. We take our work and mission seriously, but also have fun. It's why we've adopted "Sit Happens!" as our Behavior & Training Dept slogan and have "Go Nuts" emblazon across the back our of mobile spay/neuter clinic. Most important, we've earned our community's trust, involvement and support.

-----------------	----------------------

500 Shire Way, Lexington, MA 02421 | Tel: 781-541-5555 | info@cbset.org CBSET, Inc. is a not-for-profit preclinical contract research organization (CRO) dedicated to biomedical research, education and early-stage medical device testing. Our focus is helping companies develop unique tools and new methods to promote early diagnosis and deliver innovative treatments for complex diseases. We work with our sponsors to develop and test medical devices and techniques in the fields of interventional cardiology and cardiovascular surgery, minimally-invasive surgery, drug delivery, medical device testing, drug and medical device safety, and diagnostic imaging, among other therapeutic areas.

140033**Fremont Veterinary Clinic**

Subject: VET	Catalog Nbr: 5332
-----------------	----------------------

5055 NE Fremont, Portland, OR 97213
 Phone: (503) 282-0991
 Fax: (503) 282-0156
 Comfort and Efficiency
 The Clinic is set up with comfort and efficiency in mind from the beginning, with separate entrances for our feline and canine patients
 A Friendly Greeting
 Experienced receptionists will greet you and prepare your pets records for the doctor. They also will schedule appointments, facilitate prescription refills and help you choose the best products for your pet care needs.
 Exam Rooms
 The Clinic has comfortable examination rooms where you and your pet will meet with a Doctor for examinations, vaccinations, and to discuss any concerns you might have about your pet's health, diet or behavior.
 Treatment Rooms
 Part of the Clinic that most people don't see, the treatment rooms are used for procedures that are more sophisticated than can be done in the Exam Rooms, but don't require all the technology of the Operating Room.
 Operating Room
 Surgeries take place in an operating suite which is set up much like a human operating room, with state of the art equipment for administering anesthesia and monitoring patients' vital functions.
 Dentistry
 Dental care is important to your pet's overall health. We have specialized equipment for dental work, such as a digital dental x-ray unit that provides us with instant views of your pets teeth, a superior monitoring system during anesthesia and constant attention to your pet's comfort during and after the procedure.
 Pharmacy

Course Bulletin

The Doctors are supported in their work by a full pharmacy. Additionally, we work with compounding pharmacies to prepare medications that are easiest to medicate your pet with.

Laboratory

An on-site lab allows processing of tests.

Imaging

We now have a state-of-the art digital x-ray unit. All of our radiographs are uploaded and reviewed by board certified radiologists. Digital radiology gives us the specialist's interpretation within hours instead of days, allowing for a fast response in your pets' care. We have a human grade ultrasound machine that greatly facilitates the level of care we can deliver in both routine and emergency situations. Fremont has 2 certified ultrasound technicians.

	Subject: VET	Catalog Nbr: 1287

140075	Enrichment Week-Small Animal Diagnostic Imaging	
	Subject: VET	Catalog Nbr: 3001
Students will gain experience in interpreting small animal radiographs and alternate imaging studies through initial self study of clinical cases followed by a group discussion with radiologists.		

140076	Enrichment Week-Does Your Patient Think You Are A Predator?	
	Subject: VET	Catalog Nbr: 3002
<p>This program is designed to prepare non-equine oriented students for HLA clinical rotations. The focus is on effective methods of interacting with equine patients and their owners. Students will have hands-on practice in approaching and communicating with equines and their handlers.</p> <p>Course Objectives:</p> <ul style="list-style-type: none"> -Become aware of how (your) energy and body language effects horse behavior -Understand what the horse is communicating (to you) and how best to respond to create confidence and trust with the horse and handler -Gain effective client communication skills -Learn how to think like a horse (right brain vs left brain) to better understand your patient -Improve attention, mindfulness and focus while taking an equine patient case history 		

140077	Enrichment Week-Small Animal Anesthesia Dry Lab	
	Subject: VET	Catalog Nbr: 3003
<p>Do you feel prepared to come up with sedation and anesthesia protocols for your patients on clinics? Did you find anesthesia during ISAST to be relaxing and uneventful? If you answered no to either of those questions than this elective is for you. The focus of the elective will be to help the student become prepared to come up with sedation and anesthesia protocols when they hit the clinic. We will cover the basic process for working up a case on the small animal anesthesia service but will also go over how to work up a case when you are on another service such as small animal surgery, ER or medicine. In addition, we will discuss "real world" protocols that you will be using on the Tufts at Tech rotation. This four hour session is designed to be a bridge</p>		

Course Bulletin

from the class room to the clinic.

In addition to reviewing the paper work and protocols used on rotation, we will also provide an opportunity to practice clinical skills including IV catheter placement and endotracheal intubation using models. We will create clinical scenarios or drills for you to run through so that you can practice how you will prepare, anesthetize and monitor an actual patient under anesthesia. We will also have anesthesia monitors and equipment available for you to practice with and ask questions about.

Specific skills that will be covered include:

- Designing a sedation and anesthesia protocols for a sick and a healthy patients
- Calculating CRIs and understanding fluid therapy under anesthesia
- Set up and pressure check an anesthesia machine, select proper circuit, use a bair Hugger
- Fill out and use an anesthesia record
- Steps for placing an IV catheter and for intubation
- Trouble shooting a problem case and responding to anesthetic emergencies

140078	Enrichment Week-Feeding Tubes & Guidelines: SA Clinical Nutrition	
	Subject: VET	Catalog Nbr: 3004
<p>Students will participate in two sections of the lab: practical and clinical use of feeding tubes. The first section will spend two hours being shown how to and practicing e-tube placement in dogs and cats. A video and handout will be sent to the students prior to the elective that they should review. The second section will be spent working through clinical cases that require feeding tubes. Students will be mentored on how to: 1) select appropriate diets based on patient requirements, 2) write feeding orders for their patient while hospitalized, and 3) produce a written consultation with discharge orders for their patient once ready to go home.</p>		

140079	Enrichment Week-SA Nephrology/Urology	
	Subject: VET	Catalog Nbr: 3005
<p>There will be a lecture and discussion session each day describing indications and more specific "how to" for clinical techniques in nephrology (peritoneal dialysis, intermittent hemodialysis, continuous renal replacement therapy, laser lithotripsy, urodynamics, cystoscopy). There will be hands-on labs in dialysis, urodynamics, and possibly cystoscopy and laser lithotripsy. Clinical cases will be discussed, and additional techniques will be demonstrated or performed, depending on caseload.</p>		

140080	Enrichment Week-Germplasm Cryopreservation	
	Subject: VET	Catalog Nbr: 3006
<p>Designed for students with an interest in advanced reproductive technologies who would like to gain experience in the areas of embryo and semen collection and cryopreservation. The course will be held at the SVF Foundation located in Newport, RI. The mission of the SVF Foundation is to preserve germplasm of rare and endangered breeds of livestock that are threatened by extinction by creating and maintaining a genetic</p>		

Course Bulletin

bank consisting of frozen embryos, semen, fibroblasts and serum. Course topics/procedures will include superovulation and non-surgical embryo collection from cattle, superovulation and surgical embryo collection from sheep and goats, semen collection via artificial vagina from sheep and goats, embryo and semen cryopreservation, evaluation of sperm morphology and post-thaw sperm viability, embryo handling and morphologic evaluation, principles of cryopreservation (slow equilibrium freezing vs. vitrification) and long term storage in liquid nitrogen. The course is largely hands-on and students will participate in the actual collection, processing, assessment, and freezing of embryos and semen. For further information about the SVF Foundation, visit www.svffoundation.org.

140081	Enrichment Week-Dental Extractions and Radiography	
	Subject: VET	Catalog Nbr: 3007
Hands-on introduction to dental radiography (taking, developing, evaluating) and tooth extraction (including single and multi-rooted teeth, involving use of a high-speed dental drill and flap techniques).		

140082	Enrichment Week-Camelid Commons Procedural Skills	
	Subject: VET	Catalog Nbr: 3008
This is a one day elective that will allow students to perform any and all of the procedures listed: Fecal exams and identify common parasites, IV jugular catheter placement, abdominocentesis, spinal fluid collection, blood collection, castration, anything else time will permit.		

140083	Enrichment Week-Shelter Dog Dental Day	
	Subject: VET	Catalog Nbr: 3009
Students will work in teams to anesthetize and perform dental prophylaxis on a healthy shelter dog who is in need of dental care before adoption. Each student will get to do the dental work on one half of a dog's mouth. Cleaning procedures will be performed by the student under the supervision of Dr. Joo and Dr. Rosenblad. Extractions will be performed by the veterinary dentists and observed by students, however the students are encouraged to enroll in the cadaver lab to be held on Friday when the students will practice extractions. While one student is cleaning teeth, the other team member will be responsible for the dog's anesthesia under the supervision of Dr. McCobb (team will swap roles half way through the procedure). Anesthetic protocols, risks and pain management for dental procedures will be discussed. Students will be required to be in the spay lab by 7 am to perform "SOAPS" and ready the patients for anesthesia.		

140084	Enrichment Week-Tufts VETS/ECC	
	Subject: VET	Catalog Nbr: 3010
Tufts Veterinary Emergency Treatment & Specialties - E/CC rotation. During these 2-3 day rotations you will shadow our doctors receiving common emergencies, participate in cage-side rounds, and be exposed to inpatient care of critical animals. Spend time with our ECC staff (criticalists, residents, interns, emergency		

Course Bulletin

veterinarians) and start to build the skills needed to succeed in a busy emergency and critical care hospital.

140085	Enrichment Week-Cytology of Cutaneous Lesions
Subject: VET	Catalog Nbr: 3011
Participants will have a chance to practice performing fine needle aspirates, and make squash preparations and impression smears. As a group we will review the cytologic appearance of common dermatologic abnormalities and cutaneous lesions, including both inflammatory and neoplastic lesions.	

140086	Enrichment Week-Equine Practical
Subject: VET	Catalog Nbr: 3012
discussions in the morning followed by wetlab time in the afternoon to practice procedures, improve technical skills, and obtain hands-on experience with horses. Topics include: physical exam, physical and chemical restraint, field emergencies, field anesthesia and castration, oral examination and dental care, basic foot care and lameness examination and advanced bandage application, and breeding and soundness examination and female reproductive evaluation. There will be one day spent with a farrier learning how to evaluate and handle horses feet, including shoe removal, trimming, foot anatomy and evaluation and placement of shoes. Basic procedures that students will perform include: review of physical exam (filling out health certificates and EIA forms), blood collection, administration of injections and oral medications, practical ocular examination, nasogastric intubation, lameness exam, bandage applications, rectal palpation and ultrasonography, vaginal exams and urinary catheterization. Also a prepurchase examination of a horse will be performed and students will have the ability to practice radiographic techniques to obtain adequate radiographs in the field. One full day will involve a visit to the University of Connecticut to perform endoscopy on horses and perform dentistry examinations and routine dental care.	

140087	Enrichment Week-Lab Test Result Interpretation
Subject: VET	Catalog Nbr: 3013
This elective offers a low stress, chance to practice interpreting lab data, right before going into clinics. Participants will be given some case material (emphasis on chemistry data, but other data such as CBCs, cytology results may be included) to look over ahead of time and then the group will discuss possible differential diagnoses for the identified abnormalities, underlying mechanisms and further workup that might assist in reaching a final diagnosis.	

140088	Enrichment Week-Camelid Medicine & Reproduction
Subject: VET	Catalog Nbr: 3014
This one day elective covers a variety of aspects of llama and alpaca medicine, including reproductive examination (ultrasound/vaginal examination wetlab) Topics covered:	

Course Bulletin

- Sedation and field anesthesia
- Common neurological diseases and diagnostics (e.g. spinal tap)
- How to interpret "respiratory disease" in camelids
- How to interpret "colic" and "GI disease" in camelids
- How to interpret "metabolic diseases" in camelids
- The critically ill cria
- Reproductive examination (male / female) [wet lab]

140089	Enrichment Week-Intro of Physical Therapy & Rehabilitation	
	Subject: VET	Catalog Nbr: 3015
A series of lectures on introduction to principles of physical therapy and rehabilitation, indications and benefits for these modalities, how to prescribe this for your patients, video demonstration of some basic techniques, and how to pursue additional training and certification in PTR. We will hopefully be able to demonstrate some techniques on some of our own dogs.		

140090	Enrichment Week-SA Clinical Nutrition Bootcamp	
	Subject: VET	Catalog Nbr: 3016
This short course is designed to prepare students for the basic essentials in providing nutritional guidance and management for your small animal patients in practice. Topics will include reading pet food labels and doing calculations, the Top Ten Nutrition Mistakes we see frequently, learn in an interactive setting how a nutritionist approaches a case, and finally, the last hour will be student's choice, decided by those students signed up by survey in advance. (Popular sessions in the past have been FAQ, case studies, work through your own pet's management, home cooked diets, and more.)		

140091	Enrichment Week-Integrative Management of Chronic Pain/Small Animal	
	Subject: VET	Catalog Nbr: 3017
Management of chronic pain in dogs and cats is a challenge that every general practitioner faces. While medications are essential, there are a number of ways that pain can be managed using non pharmacologic therapies such as acupuncture, trigger point therapy, exercise, low level laser, chiropractic adjustment, etc., adding nutrition and other lifestyle changes. If you are keen to learn some of the basics about how these modalities may work, how to pursue advanced training, and how you can integrate them into your practice, then this should be a day well spent. Case examples and video demonstrations will be used to illustrate the various strategies.		

140092	Enrichment Week-Client Interactions & Customer Service	
	Subject: VET	Catalog Nbr: 3018
This elective will focus on common things that create customer dissatisfaction in the hospital and what can be		

Course Bulletin

done to avoid these. It will also provide tips on how to address issues that arise. There will be case scenarios provided for the students to work on and each case will then be reviewed as a group. These cases scenarios will be based on actual problems we have faced in the past. There will be some role playing for the braver students depending on the case being discussed.

140093	Enrichment Week-LASx Bovine Omentopexy Lab	
	Subject: VET	Catalog Nbr: 3019
<p>In the lab you will work as a team of two to three students to perform the anesthetic blocks, the surgical scrub, and an omentopexy procedure. You will also be required to provide the post-operative care for the heifer. This includes checking on the animal am and pm immediately following surgery (2 days), then once daily (SOAP) until the time of suture removal at 2 weeks. This includes weekends and holidays. You are also required to perform all of the treatments (which may be more than once daily) that your cow may require if she becomes sick. Patient SOAPS must be completed between 7:40 am & 8 a.m. on non-holiday weekdays and between 8:40 am - 9 a.m. on weekend days and holidays. Failure to take care of the animal properly and humanely will result in failure of the course.</p>

140110	Animal Protective League
Subject: VET	Catalog Nbr: 5362
<p>The Animal Protective League's Spay/Neuter Clinic addresses companion animal overpopulation in Sangamon County and surrounding communities. This unique high-quality, high-volume, low-cost spay/neuter program performs 52 or more spay/neuter surgeries daily. As a regional facility, we partner with animal control agencies, shelters and rescue groups within a 90-mile radius. Our goal is to defeat the tragedy of companion animal overpopulation by targeting the most prolific populations ... ferals, strays, and other unaltered animals whose owners often cannot afford the cost of spaying or neutering their companion animals or don't have any idea why they should. Since opening in 2006, the APL Spay/Neuter Clinic has performed over 56,000 surgeries. As a direct result, we have seen the euthanasia rate in Sangamon County decrease 12.5%!</p> <p>1001 Taintor Rd, Springfield, IL 62702 (217) 544-7387</p>

This course provides the fundamental principles behind radiography as a diagnostic imaging tool. The first half of this course is devoted to imaging physics and principles of image interpretation. The second half of the course covers the fundamentals of radiographic interpretation in small and large animals by anatomical regions with emphasis on evaluating the whole animal (not just the organ system of interest). The course serves as a foundation for the clinical radiology rotations during the last year of the curriculum.

Veterinary Specialists of CT, PC is a well-established, full-service, general and referral small animal veterinary hospital. Our staff includes primary care veterinarians, board certified specialists in medicine and surgery and a licensed physical therapist, providing comprehensive medical, surgical, dental and rehabilitation/post surgical care.

We provide a broad spectrum of diagnostic procedures through in-house testing and the use of external laboratories. We also work closely with local practices when special diagnostic procedures are required. The facility includes a well-stocked pharmacy, in-hospital surgery suite, in-house digital x-ray capabilities, on site MRI, a dedicated physical therapy facility including water therapy, a closely supervised hospitalization area, and outdoor walking areas.

At Veterinary Specialists, we strive to offer not only sound advice, but also optimal veterinary care, thus allowing you the enjoyment of your companion for many years. Our job is not only to treat your pet when he or she isn't feeling well, but also to help you learn how to keep your best friend happy and healthy.

140157	Smith Ridge Veterinary Center
Subject: VET	Catalog Nbr: 5370
<p>600 Oakridge Dr, South Salem, NY 10590 (914) 533-6066 We offer the “intelligent integration” of conventional and complementary veterinary medicine...</p> <p>For over two decades, Smith Ridge Veterinary Center has provided a combination of conventional and complementary veterinary medicine for both healthy and ill animals. Our experience in the “intelligent integration” of the most effective therapies from both worlds offers a unique resource to clients seeking the best possible care for their animal.</p> <p>The practice was founded in 1984 by internationally famous veterinarian Dr. Martin Goldstein, or Dr. Marty as he is more often called, who pioneered many of the methods used in the care of animals brought to Smith Ridge.</p> <p>Early in the development of the practice, Dr. Marty recognized that the world of veterinary medicine was dividing into an “either/or” choice for clients.</p> <p>Pet owners were forced to choose either a conventional approach or one based on alternative therapies. But Dr. Marty realized that a combined approach would offer the strongest path to maintaining good health and promoting healing in animals who were ill. The integrated knowledge and protocols he developed are now used by all of the Smith Ridge veterinarians and support staff for the animals entrusted to our care.</p>

140159	Camp Pendleton Veterinary Treatment Facility
Subject: VET	Catalog Nbr: 5372
<p>The mission of the Camp Pendleton Veterinary Treatment Facility (VTF) is to not only provide complete medical and surgical care for the military working dogs (MWDs), but to also provide high quality veterinary care at a reasonable cost for the pets of our military community. Because our primary attention must be devoted to maintaining the deployability and health of our canine warriors, the MWDs, we are unable to function as a full-service veterinary hospital. In light of our demanding mission with the MWDs, we focus our privately-owned animal (POA) mission on preventive medicine. We offer appointments for vaccinations, microchip implantation, health certificates for travel, wellness exams, and limited sick call. We encourage our clients to call our appointment line for availability of sick call appointments, but also realize that it often may be in the pet's best interest to be seen off-base in emergencies, non-elective surgeries, or cases requiring hospitalization or advanced diagnostics.</p> <p>Surgery</p> <p>The demanding Camp Pendleton MWD mission does not always allow us to accommodate routine surgical procedures for our privately owned animals. Currently, we are able to offer limited spay/neuter appointments and other special surgical procedures. Please call the clinic for our current surgical capabilities. These limited surgical opportunities are not based on a client's rank or position, and their availability is dependent on the Army staff's other ongoing missions.</p> <p>Bldg. 20846 Camp Pendleton, CA, 92055 Appointment Line: (760) 725-3439 Fax: (760) 725-3625</p>

E-mail: info@southboroughvet.com

The Southborough Veterinary Hospital has served Southborough, Marlborough, Hopkinton, Framingham, Westborough, Ashland and other Boston Metrowest Communities for close to 30 years. Since its inception, the SVH has provided care to the pets of the Metrowest area in a comfortable, home-like setting. We are committed to providing compassionate, high quality medicine to small animal patients at all life stages. Our patients include dogs, cats, pocket pets, guinea pigs, rabbits, ferrets and some reptiles.

SVH is involved with our community. Each year we participate in the Southborough rabies clinic providing low cost rabies vaccines to cats and dogs in the community. SVH also works with several of the humane societies and rescue groups in the area, providing quality veterinary care at low cost. Our doctors make appearances in the local school system to provide educational enrichment to children of all ages. We also host charitable events such as the annual Toys for Tots collection during the holiday season.

Dr. Ogden and Dr. Westphal took over ownership of the SVH in 1999. Both veterinarians came to Southborough after working for several years as associate veterinarians in other small animal practices in Massachusetts (Randolph and Edgartown). Dr. Ogden and Dr. Westphal met during a rigorous 13-month internship at the prestigious Angell Memorial Animal Hospital in Boston. Dr. Westphal received her veterinary degree from the University of Pennsylvania, and Dr. Ogden received her degree from the University of Minnesota, both graduating with high honors. Dr. Ogden and Dr. Westphal are members of the American Veterinary Medical Association and the Massachusetts Veterinary Medical Association.

Southborough Veterinary Hospital is a 3-veterinarian practice, with a comprehensive support staff of animal technicians, receptionists and managerial staff. We offer a full range of services to both well and sick patients, with on-site access to

VCA Veterinary Specialists of Northern Colorado (VCA VSNC) located in Loveland is a group of board certified veterinarians, who have come together to offer a more complete service to you and your pet. VCA Veterinary Specialists of Northern Colorado offers specialty consultations, diagnostics, therapeutic and surgical services for your pet. In addition, we offer a fully staffed emergency service that is open nights, weekends, and holidays. Our doctors, board-certified veterinary specialists, and emergency and critical care veterinarians work in a sophisticated environment with the most advanced veterinary medical equipment and techniques. By referring you and your pet to VCA VSNC, your veterinarian is extending your options for the care to your pet.

At VCA Veterinary Specialists of Northern Colorado, we strive to:

- Provide the highest quality medical and surgical care of our patients and set a new standard for excellence in client service.
- Build a dedicated team of doctors, technicians, and receptionists that provide compassionate, knowledgeable, state of the art care for your pet.
- Continue to expand our knowledge and innovative treatment for the benefit of your pet through continuing education for our staff and doctors.
- Promote a pleasant atmosphere in which we thoroughly educate you in diagnostic and therapeutic options to help you make informed decisions about your pet's care.
- Our specialists work together as a team through a mutual exchange of information in order to provide a seamless extension of your referring veterinarian's care.

Our veterinary hospital is segmented by the following departments:

- Emergency Care
- Internal Medicine
- Surgery
- Neurology
- Rehabilitation
