2018 FALL	Primary	Thomas Biederer	Thomas.Biederer@tufts.edu	
2018 FALL	Secondary	Philip Haydon	Philip.Haydon@tufts.edu	
<p>This course covers the process of bringing a new pharmaceutical treatment against disorders of the central nervous system (CNS) to the market, starting at the conception of a novel idea. Compared to other disease areas, CNS drug discovery faces – literally – several additional barriers. Most importantly, therapeutics need to cross the blood-brain-barrier in order to reach their site of action. This provides unique challenges throughout the discovery and development stages, especially for large molecules like antibodies. Moreover, CNS drug discovery has a high need for innovation in areas such as biomarker development and drug delivery. Students will gain an understanding of pre-clinical research, including molecular, biological, neuroanatomical, electrophysiological, and behavioral techniques; biomarker development and strategy, as well as proof of mechanism and concept testing in volunteers and patients.</p>
