130455	Urinary Pathophysiology
Subject: VET	Catalog Nbr: 221
<p>This course introduces students to the pathophysiology of diseases that occur in the urinary system of domestic animals, including congenital anomalies, infectious diseases, nephrotoxins, immune mediated diseases and urinary tract neoplasms. The effect of these changes on other body systems is also discussed. Basic normal anatomy and physiology are reviewed as necessary to enhance the student's understanding of pathophysiologic processes. Laboratory techniques for assessment of function and disease of the urinary tract and drugs used to treat diseases of the urinary tract are also introduced. The course includes a urinalysis wet laboratory and case presentations that help students integrate and assimilate lecture materials.</p>	

130565	Reproductive Pathophysiology
Subject: VET	Catalog Nbr: 222
<p>The objectives of this course are to give the student an in-depth knowledge of reproductive physiology of common domestic animals. The course builds on the knowledge students have acquired in endocrine and reproductive physiology as well as general pathobiology, anatomy and histology. The subject matter will form the foundation for the third year Theriogenology course. The normal reproductive physiology and breeding management of the porcine, equine, wildlife (bird and reptile), canine, feline, bovine, ovine, caprine and</p>	

Course Bulletin

camelid species will be covered as well as pathology of the male and female reproductive tracts. Wherever possible, the clinical significance of the physiology is emphasized.

This course meets at Tufts Ambulatory Clinic, Woodstock, CT.

Course Bulletin

veterinarians who have not had an opportunity for exposure to the marine mammal field. It is intended to provide conceptual and fundamental information on marine mammal biology and medical applications in oceanaria, as well as in emerging population health issues impacting marine mammals in the wild. An additional day is set aside for an introductory consideration of marine fish and turtles as they relate to marine ecological health assessments. Class size is limited so that students have a more effective opportunity to experience learning from leading individuals in the marine mammal field. Species: bottlenose dolphins, pygmy sperm whale, manatee, sea turtles. Marvet 1 takes place at Mote Marine Laboratory in Sarasota, FL. Marvet 2 in Sausalito, California at The Marine Mammal Center. Marvet 3 at St. George's University in Grenada. Tuition in 2003 = \$875. Tuition does not include travel, lodging or meals.

See website for application information.

130919	Rood and Riddle Equine Hospital
Subject: VET	Catalog Nbr: 4852
<p>Rood & Riddle offers to veterinary students an externship program that provides a clinical experience to satisfy the externship requirements for their degree. As a private clinic we are limited in providing as much "hands-on" experience as a teaching institution. However, there is an enormous amount of information to be gained by observation and exposure to our heavy caseload. Clinicians, interns and technicians make every effort to explain hospital cases and procedures whenever possible. Externs work with hospital clinicians or ambulatory practitioners on a rotational basis. Externs have the opportunity to observe equine specialists in surgery, internal medicine, cardiology, ophthalmology and reproduction. On-site housing is provided at no</p>	

Course Bulletin

cost to the student, and is available on a first-come first-serve basis. Externs may stay up to one month. Externs are scheduled to rotate through the surgery, internal medicine, Theriogenology, and ambulatory services, but may request an emphasis on one particular area, if desired.

To apply for an externship, students must submit by regular mail or e-mail a letter of intent, including the dates that they wish to come, and preferences, if any towards any particular area in the practice. The student must also have a letter of reference from a professor sent to Dr. Scott Hopper, Rood & Riddle Equine Hospital, P.O. Box 12070, Lexington, KY 40580. After both letters are received, externships are approved and notifications and date confirmations sent to students. For information about externships, please contact Nora Ward at nward@roodandriddle.com.

---------------	---

Subject: VET	Catalog Nbr: 4865
-----------------	----------------------

The elective offers hands-on exposure and experience with an emergency practice. The practice works as an overnight and weekend only emergency clinic. Students on the elective will usually work directly with veterinarians that are completing their program towards American College of Veterinary Emergency and Critical Care certification. The rotation consists of exposure on four nights per week. During a given week, students start working Mon evening at 7 PM until 8 AM Tues morning, and the overnight schedule would be repeated on Fri, Sat and Sun nights. The experience is in a 'real life' emergency practice and will provide

Course Bulletin

those not always typically found in the TUSVM emergency and critical care rotation.

131167	Metropolitan Veterinary Hospital
Subject: VET	Catalog Nbr: 4948
<p>At Metropolitan Veterinary Hospital, P.S., we believe that prevention is the best medicine. We strive to prevent disease when possible and to detect treatable conditions early on, when treatment can be most effective and least costly. Annual exams are the foundation of a complete health care program. This is the time when we can review the medical history, discuss any ongoing concerns, and investigate any new developments. During the examination visit, we consult on routine care practices and provide owners with feeding, grooming and training advice, where appropriate. Additionally, annual exam visits are an excellent time to discuss the recent advances in vaccination practices and to develop a protocol appropriate for your pet. Small animal practice with some shelter medicine - partnership with the Humane Society spay and neuter program and off site cat adoptions. Significant involvement with state veterinary association and local associations. 401 Fawcett Ave, Suite 100, Tacoma, WA 98402 Telephone: 253-274-0225 Fax: 253-272-0597</p>

131229	Rood and Riddle Equine Hospital
Subject: VET	Catalog Nbr: 4973
<p>Rood & Riddle offers to veterinary students an externship program that provides a clinical experience to satisfy the externship requirements for their degree. As a private clinic the amount of actual "hands-on" experience is limited. However, there is an enormous amount of information to be gained by observation and exposure to our heavy caseload. Clinicians, interns and technicians make every effort to explain hospital cases and procedures whenever possible. Externs work with hospital clinicians or ambulatory practitioners on a rotational basis. Externs have the opportunity to observe equine specialists in surgery, anesthesiology, internal medicine, cardiology, ophthalmology and reproduction. Limited on-site housing is provided at no cost to the student, and must be reserved when scheduling an externship. Externs may stay up to one month.</p>	

Course Bulletin

Externs are scheduled to rotate through the surgery, internal medicine, theriogenology, and ambulatory services, but may request an emphasis on one particular area, if desired.

131234	Woodside Equine Clinic, LLC
Subject: VET	Catalog Nbr: 4975
<p>The externship program at Woodside Equine Clinic will provide a comprehensive learning curve in all aspects of an advanced and progressive equine clinic. The high volume caseload will enhance the individuals clinical competency, diagnostic skills and communication skills. Information will be provided by 8 experienced clinicians/veterinarians in the fields of lameness, surgery, internal medicine, ophthalmology, reproduction, acupuncture and chiropractic, as well as advanced dentistry. Students should have completed at least one year of veterinary school. The practice will ensure that the student has the opportunity to spend equal time with each clinician and participate in all activities. The primary goal is to give the student an in-depth exposure to the type of experience available as an intern. Externs are required to assist the current interns with treatment of hospital cases; assist clinicians in diagnostic and therapeutic care of hospital cases and out-patients; as well as assist clinicians on ambulatory calls. This will include emergency cases. Student must provide own insurance or AVMA PLIT insurance with proof of payment of annual fee. Housing is not available</p>	

Course Bulletin

on site, but we will provide you with a list of area housing available for a minimal fee in your application packet. Student will also be expected to provide their own transportation to and from the clinic.

Course Bulletin

week elective rotation to late 3rd/4th year students. The clinic is approximately 1.5 hours from TCSVM. The schedule is as follows: Surgery on Mondays, Tuesdays, and Thursdays. Daily experience for students may include pre-surgical exams/preparation, spaying and neutering of cats, dogs, and rabbits. A wellness clinic on Wednesdays may provide the opportunity to perform physical exams, vaccinations, basic lab testing, and treatment of minor problems in the presence of a client. On Fridays, the clinic has arranged for students to accompany an animal control officer from Fall River and spend time in their shelter. The number of surgeries/clinic exams available for a student to perform in any given week varies depending on the caseload and time available. Students should review notes on sterile technique and spay/neuter surgical approaches prior to their elective rotation. Completion of Sasx core rotation is not required. If you are interested in participating in the above elective, please contact Nancy Horniak. Please note, the clinic does not except students every week and/or holiday weeks.

131339	Public Health
Subject: VET	Catalog Nbr: 233
<p>This course challenges veterinary students to explore the relationships between population health and public health, animal health and human health, and clinical and population-based health practice so that they may understand their roles as public health practitioners and veterinarians. It introduces epidemiological concepts and principles, integrates them with biostatistical tools covered in Vet 216, and applies them to the health of animal and human populations. Each concept is illustrated with examples that involve animal and human health, for example measures of disease occurrence may be illustrated with West Nile Virus or rabies, and analytic study design may be illustrated with studies of human health benefits of dog-walking. The course utilizes a variety of formats to facilitate and support the learning process case formats, group discussion and problem-solving, and oral and written articulation of ideas and concepts</p>

VET 1073

Centered on loon work, this selective would encompass diagnostic and preventative medicine, captive management, pathology, population biology and epidemiology and toxicology. Species other than loons would also be included.

131361

Craig Road Animal Hospital

Subject: Catalog Nbr:
VET 5026

We are a 12,000 sq ft, full service, canine and feline veterinary hospital located in the North West region of Las Vegas, Nevada. Services include: Preventive wellness, sick pet care, emergency/critical management, hospitalization, preventative and advanced surgery, laproscopic services, comprehensive dental care - including endodontic therapy, breeding management, examinations for local animal shelter, care for Nevada's US task force canines and local military working dogs, preceptor program accepted by US veterinary medical schools, medical boarding, routine boarding and grooming

We work closely with local neurologist, internist, board certified surgeons, cardiologist, ophthalmologist, and critical care specialist. We use telemedicine consultation services for radiographic interpretation.

MINIMUM 2 WEEK REQUIREMENT!

5051 W Craig Road, Las Vegas, NV 89130
Telephone: 702.645.5009
Fax: 702.645.0331

131362

Quarryville Herd Health Associates

Subject: Catalog Nbr:
VET 5027

Students will ride along with one or more doctors in the practice each day for routine herd health and emergency calls. Students will have an opportunity to palpate, use ultrasound, perform abomasopexy, administer IV treatment, and assist at calvings or other emergencies that arise. Students will also have an opportunity to assist in our mastitis lab and review culture techniques and results. We serve herds from 40 -1800 cows. We have both Amish and large freestall herds. Students will have the opportunity to see very modern management as well as "older" management styles.

131367	Clinical Behavior and Shelter Animal Behavior at the Animal Rescue League of Boston
Subject: VET	Catalog Nbr: 5029
<p>Students who partake in this rotation spend anywhere between one week and one month at the Animal Rescue League of Boston. The students are able to observe and participate in programs for shelter animals (behavioral evaluations, enrichment, dog training, play groups) and behavior appointments for owned animals. We have two experienced veterinary behaviorists who direct the programs and see appointments. We also have two qualified dog trainers who help with the shelter animal programs. Students should expect to spend 5 days a week at the Animal Rescue League, including Saturdays as these tend to be very busy appointment days. As every week is different, we cannot guarantee the number of clinical appointments a student will see. However, when there are no appointments, the students will be kept busy working with shelter animals, reading, watching videos or helping with one of our research projects. Each student is required to prepare either a case or a review of a topic of interest at the end of the rotation. Students will be required to find their own housing. The ARL is close to public transportation.</p> <p>Website: www.centerforshelterdogs.org and www.arlboston.org Comments: Each student's experience will vary depending on the activities of the various departments during their visit. Every attempt will be made to accommodate specific requests for experience, but there can be no guarantee that every experience will be available every rotation.</p> <p>The visiting student is expected to review the Animal Rescue League of Boston's website, to include the position statements in order to familiarize themselves with the organization prior to arrival. Students should wear casual dress (khakis & polos eg). No open toed shoes. A volunteer waiver will need to be signed on the first day of externship. There will be a formal orientation the first day of the rotation, and students will fill out a questionnaire about interests and expectations.</p> <p>Boston, MA Telephone: (617) 226-5632</p>	

131369	The UGA Community Practice Clinic

opportunities. Includes media outreach, voter election issues (green voter issues), organizing citizens and community groups.

Clean Water Action

76 Summer Street 3rd Floor, Boston, MA 02110

Telephone: 6174234661

131392	Day-to-Day Functioning of the Wildlife Clinic
Subject: VET	Catalog Nbr: 1075
<p>Students will primarily assist with day-to-day clinic functions, such as preparing animal's diets and cage cleaning. Will have opportunities to learn clinical laboratory techniques including fecals and CBCs. Students will be able to assist with special projects such as data analysis, bird banding, continuing education conference on avians and exotics. General introduction to hands-on wildlife care.</p>	

131421	Drumlin Farm Wildlife Sanctuary
Subject: VET	Catalog Nbr: 1076
<p>Experience with handling, husbandry, cleaning and feeding of farm animals and native wildlife; good initial exposure opportunity. Educational animals as well as display animals. Monday through Sunday, 9am-12pm. Drumlin Farms 208 South Great Road, Lincoln, MA 01773 Telephone: 7812592205</p>	

131433	Ecotarium
Subject: VET	Catalog Nbr: 1077
<p>Experience involving their animal collection. Selection is by interview not TCSVM lottery. New England Science Center 222 Harrington Way, Worcester, MA 01604 Telephone: 5087919211</p>	

131451	Environmental Protection Agency
Subject: VET	Catalog Nbr: 1078
<p>Experience and contribute to the federal government's environmental efforts in their regional office. Many opportunities mutually advantageous to the veterinary community and to the EPA exist in the areas of resource protection, policy and planning, environmental toxicology/acid rain, wetlands delineation and assessment. Environmental Protection Agency JFK Federal Building, Boston, MA 02203</p>	

Course Bulletin

Telephone: 6179181050

131458	Clinical Pharmacology
Subject: VET	Catalog Nbr: 236
<p>This course is designed to illustrate the clinical applications of various drug groups and their interactions. Basic classes of drugs, their mechanisms of action and their primary therapeutic applications are reviewed. The clinical applications of drug groups, pharmacotherapeutic principles involved and the possible drug interactions are emphasized. Emphasis is also placed on the judicious use of drugs to attain maximum benefits with minimum risk. Drugs with a low therapeutic index are discussed in terms of symptoms to be recognized and the measures to be taken in the event of drug-induced toxicity and emergency.</p>	

131471	TCSVM Heifer Watch
Subject: VET	Catalog Nbr: 1079
<p>The purpose of this selective is for you to gain knowledge and experience in working with beef. This watch is especially important for first calf heifers. The selective will consist of a short classroom informative session to demonstrate proper calving presentation, cattle behavior and calf care. If complications arise, calf-care will be required from the student. Most importantly, how to deal with dystocia will be discussed. The selective will run as follows: A list of calving dates will be given from which you can choose the dates that are needed to be covered. Students may monitor the pregnant dams from the heated herdspersons office. The herdsman will carry a pager and will immediately return page to help assess any complications. Students involved with this selective will be given the opportunity to gain hands-on experience in the parturition process of beef cattle.</p>	

131494	Museum of Science
Subject: VET	Catalog Nbr: 1080
<p>Previous experience in animal care preferred. Interest in working in a museum environment. Good interpersonal skills. The intern will assist in routine care and maintenance of the museum's live animal collection and animal exhibits. This collection currently consists of more than 100 animals (primarily wild species). The intern must arrange to receive academic credit for the internship. Send a cover letter, resume and two letters of recommendation. One recommendation should be from a professor to Sandra Smith, Intern Program Coordinator.</p> <p>Museum of Science 1 Science Park, Boston, MA 02114 Telephone: 6175890314</p>	

131524	Natural Heritage and Endangered Species Program
Subject: VET	Catalog Nbr: 1081

Course Bulletin

Should have interest in environmental studies, natural resource planning. Conservation projects include analysis of statewide wildlife rehab data, processing field biologists' observations of Mass. Rare species and/or analyze endangered species records, help evaluate potential impact of development proposals on rare species/ecologically significant natural communities, and/or preparation of state endangered species or zoonotic disease fact sheets. Call for current information and opportunities. Projects vary from semester to semester.

Mass Division of Fish and Wildlife
Route 135, Westboro, MA 01581
Telephone: 5087927270

131527	Hemic-Lymphatic and Clinical Pathology
Subject: VET	Catalog Nbr: 237
<p>Normal structure/function and pathophysiology of the hematopoietic and lymphatic systems are covered in this course, including a discussion of coagulation and its disorders. This is followed by principles of instrumentation, performing and interpreting hemogram and coagulation tests. The principles and application of serum biochemical analysis are presented, followed by urinalysis and immunodiagnostics. Cytologic evaluation of body fluids, organs and masses are discussed. Emphasis is placed on integrating concepts of instrumentation and normal and abnormal physiology to introduce the student to developing an organized method for interpretation of laboratory data.</p>	

131535	Nature Conservancy
Subject: VET	Catalog Nbr: 1082
<p>Prepare abstracts for stewardship staff and other land managers with current management related information on those species and communities that are most important to protect or control. Summarize data, speak with researchers/academic community, land managers. Learn natural history of endangered species and computer data management. Species include box turtle, short-eared owl, black rat snake, bluet damsel flies, others. Prerequisite: interest in biological monitoring, natural resource planning. Additional info available at Student Affairs Office.</p> <p>Nature Conservancy 759 Milk Street Suite 300, Boston, MA 02109 Telephone: 6174232541</p>	

131548	Northeastern University
Subject: VET	Catalog Nbr: 1083
<p>Should have strong interest in wildlife. Take an ecological and systematic perspective working in wildlife biology with mammalogist. Range from shrews to bears and birds. Ectoparasites, carnivore food habits, necropsies, taxonomy, other natural history topics. Research, field work (time of year dependent). Can be tailored to individual interests. Consider meeting with Dr. Jones ahead of selection to talk in terms of specific opportunities for given semester or summer.</p>	

Course Bulletin

Department of Biology
360 Huntington Ave, Boston, MA 02115

131560	Wilderness Society
Subject: VET	Catalog Nbr: 1084
<p>December/January, May/June, September 1. Part or full time. Three month, 20 hour/week minimum commitment, flexible hours. Prerequisite: Energetic, organized, responsible, self-starter with excellent written and verbal communication skills, neat and thorough work habits and the ability to work well independently and as part of a team. Interest in environmental issues, working knowledge of IBM-compatible computers, experience with other environmental or public interest organizations. Duration of internship could be extended or renewed at a later time. The Wilderness Society is devoted to preserving wildlife and wilderness, protecting America's prime forests, parks, rivers, deserts, and shorelines, and fostering an American land ethic. Cover letter and resume required. Send to: Julie Wormser.</p> <p>Wilderness Society 45 Bromfield Street Suite 1101, Boston, MA 02108 Telephone: 6173508866</p>	

131574	Topics in Clinical Specialization
Subject: VET	Catalog Nbr: 1085
<p>There are now 21 recognized veterinary specialties, from Surgery to Pathology to Zoo Medicine. Specialization offers a wide variety of career options for veterinarians but is not right for everyone. This selective allows students to explore options for specialization early in their careers to determine whether it's right for the individual and, if so, which specialty fits them best. In addition, for students who wish to pursue specialization, a program comprised of activities such as clinical rounds, clinical experience, and clinical research projects can be developed to help make them as competitive as possible in the internship/residency matching program.</p>	

131584	PBL III
Subject: VET	Catalog Nbr: 238

131587	Accelerated Clinical Excellence Skills
Subject: VET	Catalog Nbr: 1086
<p>This flexible, self-styled selective is designed to help students develop the skills required to be an excellent veterinary clinician, whether in specialty or private practice. These skills include Evidence-Based Medicine (EBM(Evidence-Based Medicine)), the use and critical appraisal of the literature to develop best available</p>	

Course Bulletin

treatment practices, effective client communications, career development, and lifelong learning. Students can select from numerous available experiences that can be selected based on individual interests, and credit can be accumulated over the course of a semester, a year, or over two academic years.

131604	Accelerated Clinical Excellence Journal Club
Subject: VET	Catalog Nbr: 1087
<p>Journal club will help students to keep abreast of new developments in areas of their interests in clinical veterinary medicine and to engage in informal discussion and interaction. The ability to critically appraise the evidence is a skill required to become the best possible clinician and this, along with presentation skills will be enhanced through small group discussions of current veterinary articles. Journal club sessions will be led by clinical faculty in areas of interest to the students.</p>	

131619	Canine Splenectomy Research
Subject: VET	Catalog Nbr: 1088
<p>The purpose of the project is to identify predictors of short term survival (survival to discharge) in dogs undergoing splenectomy for splenic mass lesions. Many dogs with splenic mass lesions--particularly those with splenic hemangiosarcoma--have a poor long term prognosis, and a better understanding of the clinical parameters that may predict survival to discharge will enable us to better advise owners considering surgery and hospitalization for their dogs. We have identified approximately 1,100 dogs that have undergone splenectomy for splenic masses during the past several years. We need to assemble a team of about four to five selective students to review the patients' records in FIRST (the hospital's electronic medical records system) and gather clinical data on the patients. The data will then be analyzed statistically at the end of the semester. This selective will give students an opportunity to learn about the design of a large clinical retrospective study, to gain an understanding of the clinical issues surrounding the management of patients with splenic masses, and to participate in data collection for a research project. Students should be prepared to spend a minimum of four hours per week working on the project.</p>	

131634	Tufts Ambulatory Clinic
Subject: VET	Catalog Nbr: 1089
<p>Third year students only. Two students per day. Tufts Ambulatory Clinic 149 New Sweden Road, Woodstock, CT 06281 Telephone: 8609742780</p>	

131650	Dr. Jeffrey Griffiths
Subject: VET	Catalog Nbr: 1090

Course Bulletin

Observational involvement with an infectious disease section. Includes infectious disease rounds with exposures to issues and concepts of public health, immunology, microbiology and clinical medicine.

Tufts University School of Medicine

136 Harrison Ave Public Health and Family Medicine, Boston, MA 02111

Telephone: 6176366941

131663	TCSVM Anatomy Lab
Subject: VET	Catalog Nbr: 1091
<p>Students may choose to do any of the following (one at a time):# Preparation of skeletons: includes preparation of bones and mounting skeletons.# Vascular cast preparations: learn techniques to inject plastic polymers into blood vessels and prepare vascular casts of animal limbs, organs, etc.# Plastic embedding techniques: learn to embed sectioned body parts in clear plastic.# Embalming techniques: learn the techniques of whole body preservation.# Preparing videotaped demonstrations for anatomy teaching.</p>	

131664	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
<p>The objective of this course is to give students an introduction to how the small and large animal hospitals, Grafton campus farm and ambulatory service in Woodstock, CT operate. The experience is primarily observational. The student will "shadow" a fourth year student to obtain an insight into the process of medical diagnosis and treatment of diseases. Throughout the year, students will spend a total of one full day in the large animal hospital, one full day in the small animal hospital, one night in the emergency room, one full day on the ambulatory service and one half day (spring semester) at the farm. In addition, students will be assigned to spend either ½ day in anesthesia, or ½ day in wildlife. The goal will be for students to complete a physical examination of a clinical patient during each rotation. In addition, students will be paired with a fourth year student to participate in 2 treatment shifts in the wards over the course of the year. The purpose of treatment shifts is for students to become acquainted with treatment sheets, medical orders, and animal restraint. No textbook is needed for this course. A single short introductory session for the entire class is held before the rotations start. A handout with the required information is available in TUSK.</p>	

131682	International Development
Subject: VET	Catalog Nbr: 1092
<p>This selective will provide students with an introduction to:* International development theory* The role of veterinarians in international development* Support to current international projects being implemented by the International Veterinary Medicine Section* Opportunities to interact with veterinarians and veterinary students* in international settings Prevention and control of diseases of international importance* Socio-economic aspects of animal production and health* Global Health</p>	

Course Bulletin

131698	Children's Hospital
Subject: VET	Catalog Nbr: 1093
<p>Involvement with variety of species including: rodents, dogs, swine, sheep and rabbits. Experience could include involvement in laboratory animal care, surgery and postoperative management, basic techniques such as phlebotomy.</p> <p>Children's Hospital 300 Longwood Avenue, Boston, MA 02115 Telephone: 6173555062</p>	

131713	Introduction To Zoological Medicine
Subject: VET	Catalog Nbr: 240
<p>This course provides the introductory material necessary to set the stage for the Zoological Medicine survey course given in the third year Semester I. In this course we explore the topic of conservation medicine and introduce general concerns with diagnosis, treatment and animal restraint of non-domestic species. Career options in free-ranging wildlife, zoo animal, laboratory animals, exotic companion animal and poultry medicine are also presented with the aim of developing an appreciation for the role of veterinarians in non-traditional settings.</p>	

131714	Harvard Primate Center
Subject: VET	Catalog Nbr: 1094
<p>Second and third year students only. Clinical rounds; specialized involvement in medical primatology and gastroenterology. Prerequisite: students should be interested in lab animal and exotic animal medicine. Note: Health hazards potential. Monkeys and hepatitis, be aware and inquire. Current TB test required. Mornings only. Minimum of 10 exposures required for credit.</p> <p>Harvard Primate Center 1 Pine Hill Drive, Southboro, MA 01772 Telephone: 5086258183 Fax: 5086258190</p>	

131732	Introduction to Laboratory Animal Medicine
Subject: VET	Catalog Nbr: 1095
<p>This selective is an introduction to the use of animals in biomedical research and the role of the laboratory animal veterinarian. In the first half of the course, presentations from experts in the field cover regulatory control of research animal use, the role of the Institutional Animal Care and Use Committee, animal models in biomedical research, and ethical use of animals. A laboratory animal anatomy module includes three dissection labs devoted to anatomy of rodents, lagomorphs, hamsters, ferrets, and gerbils. The second half of the course is focused on care of research animals and design of research animal facilities. The class will tour a</p>	

Course Bulletin

barrier rodent housing facility, a rodent facility using robotic technology, and a primate facility. Students are expected to attend all classes, labs, and tours. They will be required to write one analysis paper on research animal ethical cases and to work in groups to create a design for a multi-species research animal facility. The class holds a mock Animal Care and Use Committee meeting. This class serves as an introduction and required pre-requisite for admission to the Masters in Laboratory Animal Medicine combined degree program at the Cummings School. Students who do not wish to enroll in the masters program are welcome to take the class as a 1 credit selective.

131736	Emerging And Exotic Diseases Of Animals & Initial Accreditation Training	
	Subject: VET	Catalog Nbr: 241
<p>The Emerging and Exotic Diseases of Animals (EEDA) & Initial Accreditation Training (IAT) course is an on-line self-paced course. This course is designed to provide students with a fundamental understanding of 1) How to recognize the majority of EEDA; 2) The role of the veterinary profession in preventing, detecting, and responding to incursions of EEDA; 3) The role of the OIE, USDA, federal and state governments in responding to EEDA; and 4) The impact EEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation.</p>		

131745	Massachusetts Institute of Technology	
	Subject: VET	Catalog Nbr: 1096
<p>Fridays are not an option. Provides diagnostic laboratory and pathology services to MIT and other institutions. Veterinary care and maintenance of animal health at MIT are primary missions, integrated with diagnostic laboratory services, research funded by NIH and private industry, and postdoctoral training in laboratory animal medicine. Research focuses on infectious diseases in laboratory animals and animal model development. Significant interaction with the biomedical research community.</p> <p>Massachusetts Institute of Technology 77 Massachusetts Avenue, Cambridge, MA 02139 Telephone: 6172531757</p>		

131751	Accelerated Clinical Excellence I (ACE)	
	Subject: VET	Catalog Nbr: 242
<p>The overall goal of the ACE Course is to give students the skills required for excellence in veterinary practice. This course will provide core information about excellence in clinical practice, and will be complemented by a variety of optional opportunities available to students through the ACE Program. The content of the ACE Course is intended to cover areas which are not specifically addressed in other parts of the curriculum but which are important aspects of becoming a successful clinician, whether in specialty or private practice. The specific goals of the course are as follows:</p> <p>To incorporate concepts of Evidence-Based Medicine (EBM) through organized instruction, clinical cases, and active practice using EBM principles. To improve students' abilities to search information resources and critically appraise literature which supports utilization of best available treatment practices. To learn about</p>		

Course Bulletin

optimizing communication with clients, selecting diagnostic tests, writing accurate financial estimates, and referring cases. To introduce students to ways to maintain lifelong learning after graduation.

131760	TCSVM Clinical Equine Exercise Physiology
Subject: VET	Catalog Nbr: 1097
<p>Second year students only. Exciting, dynamic, practice-oriented, fun - could this really be physiology? The answer is a resounding YES! when you're talking about equine exercise physiology. Whether you're competing with own horse, planning to be a general practitioner, or looking for a career in sports medicine, this selective will give you a good foundation for understanding what is happening in the exercising horse. This seminar-style selective will review cardiovascular and respiratory function in the exercising horse, muscle metabolism, exercise and the immune system, training for speed, strength and endurance, long-term effects of training, the effects of heat and humidity in the exercising horse, nutrition for the sport horse, the use of ergogenic aids, measurement of VO₂max, use of treadmills and heart monitors performance. We will meet once a week during the fall semester for two hours. Discussion will be based on primary literature-you'll learn what journal to read, and how to read then effectively. Meeting times are flexible. This course will also be a pre-requisite for the fourth year clinical treadmill and endoscopy elective.</p>	

131765	Skeletal Pathobiology
Subject: VET	Catalog Nbr: 243
<p>The objective of the Skeletal Pathobiology course is to offer the veterinary student a more natural learning progression from the normal anatomy, histology and physiology of the muscle and skeleton systems that are taught in the first year of the curriculum. It will provide students with the basic pathophysiology of bone disease and the mechanics of fracture healing, preparing students to enter the 3rd year curriculum more prepared and where they will learn about specific bone and joint diseases and treatments. By setting the groundwork in the 2nd year with this course, the 3rd year curriculum can more appropriately address the clinical treatment of these musculoskeletal disorders (through the presentation of cases with musculoskeletal diseases and discussion of treatment options) without having to go over basic principles, which currently usurps most of the time.</p>	

131776	TCSVM Large Animal Medicine
Subject: VET	Catalog Nbr: 1098
<p>Involved in management of outpatient/inpatient medicine cases at the HLA. Only one student allowed per morning or afternoon. Following completion of selection process, contact Dr. Paradis as a group to coordinate schedules, be flexible.</p>	

131790	TCSVM Large Animal Surgery
Subject:	Catalog Nbr:

Course Bulletin

VET	1099
Involvement with management of equine outpatients and inpatients.	

131801	Ethics & Veterinary Medicine
Subject: VET	Catalog Nbr: 245
This course acquaints students with ethical issues in various aspects of veterinary medicine through short faculty presentations and reading assignments. Students then analyze and discuss these current ethical issues in small groups. The course emphasizes the process of problem solving in addressing ethical issues and encourages thoughtful and respectful debate	

131806	TCSVM Neonatal Intensive Care
Subject: VET	Catalog Nbr: 1100
Nights and Weekends, March through June options. 45 hours required for 0.5 credit. If necessary, could carry over hours from Year I to Year II or Year II to summer and receive credit after full participation. Students will work closely with newborn critically ill foals on nights and weekends.	

131823	Bristol County Veterinary Hospital
Subject: VET	Catalog Nbr: 1101
All aspects of mixed animal practice. Be prepared to go into the evenings if calls require it (mixed equine/SA option). Bristol County Veterinary Hospital 60 Olney Street Briarwood Plaza, Seekonk, MA 02771 Telephone: 5083363381	

131836	Natural History Collection
Subject: VET	Catalog Nbr: 1102
This selective, offered jointly through the Wildlife Clinic (Dr. Courchesne) and Anatomy (Dr. Hawkes) will serve to build a foundation for a permanent natural history collection. The ultimate aim is the establishment of a campus natural history museum open to members of the public as well as a variety of researchers. Students participating in the selective will be instructed in preparation of avian study skins, and skeletal preparations from a variety of animal classes. Other techniques which may be included based on student interest could include plastination and the preparation of mammalian pelts. The selective will be hands-on and tailored to student interests. Students with prior experience in disciplines such as botany, entomology or parasitology are welcome to bring skills and project ideas as the selective is by no means limited to the techniques listed above.	

Course Bulletin

131850	Dr. Bryan Parrott
Subject: VET	Catalog Nbr: 1103
<p>Prefer afternoons, not weekend. Call to arrange schedule. Dr. Bryan Parrott PO Box 298, Hamilton, MA 01938 Telephone: 9784686307</p>	

131861	Large Animal Medicine & Surgery I
Subject: VET	Catalog Nbr: 301
<p>Large animal medicine and surgery are taught together to facilitate the learning of the problems and treatments of large animal species. Diseases are discussed by systems within the species affected. The approximate proportion of lectures per species is as follows: equine - 35%, bovine - 35%, small ruminants and llamas - 15% and swine - 10%. Medicine lectures utilize a problem-oriented approach using case examples for diseases. The surgical lectures provide students with guidance on the didactic aspects of surgical diseases of large animals. The course is team taught by the large animal hospital and ambulatory faculty. It is supplemented by guest lecturers who present information on beef and swine production, viewed from the perspective of the animal industry. The course builds on previous courses in the basic sciences on pathophysiology and clinical pathology.</p> <p>Recommended text for the medicine portion of the courses is Large Animal Internal Medicine, Edited by Brad Smith, 4rd edition. Sports medicine lectures can be augmented with the reference: Diagnosis and Management of Lameness in the Horse edited by MW Ross and SJ Dyson (2003). The text , 4th ed, edited by Auer and Stick is the recommended reference for the equine surgical portion of the courses.</p>	

131866	Dr. Mary Kahan
Subject: VET	Catalog Nbr: 1104
<p>Primarily equine lameness practice with acupuncture. Requires student with definite equine interest and must be prompt and on time. Dr. Mary Kahan 3 River Street, Byfield, MA 01922 Telephone: 9784625553</p>	

131881	Hampton Veterinary Services

<p>Practice serves Rockingham and Suffolk Downs. Can do full day Saturday or Sunday in lieu of two afternoons/week to fulfill requirement for one credit.</p> <p>Rockingham Park Rockingham Park Boulevard, Salem, NH 03079 Telephone: 6033296689</p>	

131924	Small Animal Medicine and Surgery I
Subject: VET	Catalog Nbr: 303
2016 FALL	Primary Linda Ross linda.ross@tufts.edu
<p>This course is intended to develop skills in clinical reasoning. It provides an opportunity for the student to integrate knowledge obtained in prior courses to evaluate a clinical problem. Depending upon the specific problem, the student will evaluate historical, physical, laboratory and radiological data to formulate a diagnostic and treatment plan. For surgical problems, discussion will emphasize indications for specific procedures, possible complications and postoperative care of patients with common surgical problems. Prognostic factors for both medical and surgical problems will be discussed.</p>	

131927	Salmon Brook Veterinary Hospital
Subject: VET	Catalog Nbr: 1108
<p>Prefer to set up schedule with student. Saturday best but as season slows may not work all day Saturday. Afternoons are possible but may have difficulty meeting up with student in afternoon.</p> <p>Salmon Brook Veterinary Hospital 136 Salmon Brook Street, Granby, CT 06035</p>	

Course Bulletin

131942	TCSVM Pathology
Subject: VET	Catalog Nbr: 1109
Necropsy room experience.	

131956	Theriogenology
Subject: VET	Catalog Nbr: 305
2016 FALL	Primary
David Matsas	david.matsas@tufts.edu
<p>This course embraces the applied aspects of animal reproduction. It builds on information presented in the second year course covering pathophysiology of the reproductive system. Course material includes diagnosis, treatment, and management of reproductive disorders in the equine, bovine, ovine, caprine, porcine, canine, feline and camelid species. Practical breeding management, evaluation of breeding programs, obstetrics, embryo transfer and advanced reproductive technologies are also covered.</p> <p>This class meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

131958	TCSVM Adventures in Veterinary Medicine Program
Subject: VET	Catalog Nbr: 1110
<p>DVM students staff the day-to-day activities of the AVM Program. AVM is an educational, career exploration program for individuals (6th graders through adults) interested in pursuing a degree in veterinary medicine. Duties include speaker confirmation and support, farm animal management and processing, presentation of information on veterinary specialty areas, leading discussions, mentoring prospective applicants to the school, providing information about the DVM program/Tufts, managing the shadow program, and other duties as required by the Director. If interested, submit cover letter and resume well ahead of summer selective selection dates to Laura Melbin-Diniz, Administration Building, Room 216, Grafton Campus. Selected candidates will be interviewed for the positions. Must have excellent animal-handling, interpersonal and organizational skills as well as reliable transportation. 1 credit, summer selective option: 3-4 students (M-F); 11 weeks (salaried).</p>	

131973	Community Service
Subject: VET	Catalog Nbr: 1111
<p>This flexible self-styled selective was developed to support TCSVM's commitment to make a positive contribution to the community. It provides DVM students the opportunity to participate in a variety of experiences, for which they can accumulate credit over the course of a semester or over two academic years, depending on how they structure their involvement. Eligible activities may include: * speaking engagements*</p>	

Course Bulletin

giving campus tours* working on/participating in STEM (Science, Technology, Engineering and Math) education and conferences* volunteering at off-campus community service organizations or with TCSVM groups

131987	Gap Junction
Subject: VET	Catalog Nbr: 1112
<p>Gap Junction is an after school program for middle school children from school in the Worcester and Grafton school districts. Each middle school group attends a series of four workshops, held on Tuesday afternoons at the veterinary school campus in North Grafton. Topics focus on the study of body systems. Sessions begin with a brief lecture and are followed by hands-on laboratory exercises and a question-and-answer session. Radiographs, anatomy specimens, stethoscopes, and power point presentations are used to hold the interest of the students. Visits to the lamb shed and horse barn, located on our North Grafton campus, offer urban/suburban students exposure to animals they may never have seen up close. It is a great opportunity to excite middle school students about biology and for veterinary students to develop communication skills for translating complex medical ideas into understandable information to the lay person!</p>	

132003	Teaching Specimen Preparation
Subject: VET	Catalog Nbr: 1113
<p>In this selective students will assist in preparing anatomical specimens for teaching and display, with the humane-oriented goal of decreasing the school's use of animals for anatomy and related courses. Students will learn a variety of techniques for preparing anatomical specimens, with an emphasis on plastination. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying hollow viscera, and corrosion casts of bronchial and vascular systems. Individual projects are encouraged.</p>	

132016	Anesthesia & Analgesia
Subject: VET	Catalog Nbr: 307
2016 FALL	Primary Cheryl Blaze Cheryl.Blaze@tufts.edu
<p>This course embraces the applied aspects of animal reproduction. It builds on information presented in the second year course covering pathophysiology of the reproductive system. Course material includes diagnosis, treatment, and management of reproductive disorders in the equine, bovine, ovine, caprine, porcine, canine, feline and camelid species. Practical breeding management, evaluation of breeding programs, obstetrics, embryo transfer and advanced reproductive technologies are also covered.</p>	

132018	Introduction to Geographic Information Systems
Subject: VET	Catalog Nbr: 1114
<p>A three week workshop that will introduce students to the fundamental concepts of Geographic Information</p>	

Course Bulletin

Systems. It will consist of a theoretical introduction combined with hands-on computer tutorials utilizing ArcGIS software. This course is designed for novices in GIS with specific focus on mapping and spatial analysis applications to human and animal health. Topics discussed in the class include field data collection for mapping using GPS, basic GIS mapping methods, spatial data sources, etc. Students will meet with the GIS instructor for lectures and labs. Students will complete tutorials on their own to develop their GIS software skills. The students will then work with their research mentor to incorporate GIS into their projects. Selective credit for this course should likewise be arranged independently with research mentors.

132031	Pet Loss Hotline
Subject: VET	Catalog Nbr: 1115
<p>The Pet Loss Hotline (PLH(Pet Loss Hotline)) provides grieving owners with an opportunity to discuss the loss of their pet with concerned and compassionate veterinary students. The PLH(Pet Loss Hotline) is part of the Animals in Community track of the Center for Animals and Public Policy at the Cummings School of Veterinary Medicine. As PLH(Pet Loss Hotline) volunteers, veterinary students will obtain experience in supporting owners who have experienced the loss of a pet. The overall goal is for students to put this experience to use during their clinical training and veterinary practice. An experienced counselor will provide training in hotline work. Training includes developing skills for listening and communication, as well as recognizing and dealing with crises. Training sessions will be held on the Grafton Campus, and will be augmented by monthly debriefing meetings with a counselor and faculty advisors to discuss issues (including feelings) that may have arisen during hotline work. Twenty four-hour emergency consultation will be provided as a backup to participants by faculty advisors and counselors as needed. Students *must* attend the mandatory training sessions and monthly debriefing meetings. Student volunteers will be scheduled to work evening PLH(Pet Loss Hotline) shifts during which they will take incoming calls and respond to hotline voice-mail messages. In addition, each semester, students will be required to write a one page case summary of a PLH(Pet Loss Hotline) call that they received, to be submitted to faculty advisors for critique. The aim of this case summary is to encourage the student volunteer to think about the call that they received and how they handled it, as well as to receive feedback from the faculty advisors. Students participating in one semester plus summer break, or two semesters, will receive one credit. Those who participate in one full year (sequential fall, spring, and summer selective blocks) of hotline support will obtain two full credits. In order for the hotline to be adequately staffed, preference may be given to those students attempting a two credit selective. The Pet Loss Hotline has been functioning since 1996. The faculty advisors and student volunteers are very excited about the growth in popularity of the hotline and the opportunity that it provides us with to help people, who have lost a pet, in their time of need. We constantly receive letters and cards from pet owners around the country thanking us for our work. In addition, press releases have unanimously applauded what they see as our vital role in the support of grieving pet owners. The benefits go far beyond a warm, fuzzy feeling. Students find that the training sessions improve their listening and counseling skills as well as communication skills. If you don't know what to say someone if their animal dies, if you can't imagine how to deal with people crying after their animal is euthanized, and if you want to make a real difference, sign up for this selective.</p> <p>h5. Pet Loss Hotline Faculty Advisors- Dr. Claire Sharp := Dr. Sharp is an Assistant Professor in the Department of Clinical Sciences. She is board certified in small animal emergency and critical care medicine; working both in the emergency room and intensive care unit of the Foster hospital for small animals. As well as her clinical duties, Dr. Sharp is course director for the Problem Based Learning course, teaches in a variety of other courses for preclinical veterinary students and performs clinical research. Working on the front lines</p>	

Course Bulletin

of the hospital Dr. Sharp understands the importance of the good communication with pet owners and the challenges that veterinarians face as they help pet owners through the grieving process. - Dr. John Byrnes := Dr. Byrnes is a Research Assistant Professor in the Department of Biomedical Sciences. He is a neuroscientist with research interests relating to the brain mechanisms of psychiatric disorders and the neuropharmacology of psychotropic drugs. In addition to research, he is also a clinician in outpatient practice where he provides counseling, neuropsychological assessment, and cognitive rehabilitation to patients with brain injury and other neurological diseases. Dr. Byrnes holds a PhD in Neuroscience and MA in Counseling Psychology.

132046	Tufts Puppy Socialization Class
Subject: VET	Catalog Nbr: 1116
<p>Tufts offers puppy socialization classes for pups that are 4 months old or younger. Class is held in the 800 Conference Room in the Large Animal Hospital on most Tuesday and Thursday evenings from 6:30pm - 7:30pm. Students help with setting up and breaking down the room, handling puppies, performing a mock vet exam, obedience training (if experienced), managing puppy play time, writing individualized reports on each puppy's class progress and writing a short research paper about the role of socialization in the development of fearful behavior.</p>	

132061	Veterinary Informatics
Subject: VET	Catalog Nbr: 1117
<p>The Veterinary Informatics Selective/Elective is an intensive study of topics related to information and computers in veterinary practice. The broad topics covered include:# Assessment of basic computer skills# General internet information# Searching for and evaluating internet veterinary resources# Access and evaluation of veterinary literature# Evaluation of veterinary practice management software# Use of computer technology and software# Internet communication and collaboration# Continuing Education# Web site design and authoringThe selective is designed to help prepare students to utilize technology in their careers to increase the quality of patient care, provide ongoing access to educational information (life-long learning) and to promote information literacy skills.</p>

Subject: VET	Catalog Nbr: 308
<p>Large animal medicine and surgery are taught together to facilitate the learning of the problems and treatments of large animal species. Diseases are discussed by systems within the species affected. The</p>	

Course Bulletin

approximate proportion of lectures per species is as follows: equine - 35%, bovine - 35%, small ruminants and llamas - 15% and swine - 10%. Medicine lectures utilize a problem-oriented approach using case examples for diseases. The surgical lectures provide students with guidance on the didactic aspects of surgical diseases of large animals. The course is team taught by the large animal hospital and ambulatory faculty. It is supplemented by guest lecturers who present information on beef and swine production, viewed from the perspective of the animal industry. The course builds on previous courses in the basic sciences on pathophysiology and clinical pathology.

Recommended text for the medicine portion of the courses is Large Animal Internal Medicine, Edited by Brad Smith, 4rd edition. Sports medicine lectures can be augmented with the reference: Diagnosis and Management of Lameness in the Horse edited by MW Ross and SJ Dyson (2003). The text , 4th ed, edited by Auer and Stick is the recommended reference for the equine surgical portion of the courses.

132091	Harvard School of Public Health
Subject: VET	Catalog Nbr: 1119
<p>Research in emerging arthropod-borne infections. We complement field based work (epidemiology and ecology) in coastal New England sites with laboratory methods to determine the public health burden of Lyme disease, babesiosis, ehrlichiosis and arboviral encephalitis. Opportunities for field work; or projects involving data analysis, microscopy, histopathology, immunology and molecular biology.</p> <p>Department of Tropical Public Health 665 Huntington Avenue, Boston, MA 02115 Telephone: 5088874236</p>

132228	Policy Issues in Shelter Medicine
Subject: VET	Catalog Nbr: 1128
<p>The shelter policy selective is an intensive course focusing on animal shelter policy. The format is readings, lectures and group discussion. Students may take part one for 0.5 credits or both parts of the selective for 1 credit. Masters students and certificate students must take both parts. Part 1The first part of the course involves ten discussion sessions. The sessions will require some outside reading and will be a mix of didactic and discussion based presentations. Each session will focus on a different topic: * History of animal sheltering and what is an animal shelter* Shelters and the law, animal control in Massachusetts* Adoption Policy* Pet Relinquishment: reasons and preventative strategies* Stress assessment and temperament testing* Euthanasia Policy and decisions* Data collection and research design to support policy decisions* Pet overpopulation: where are we now?* Shelter Design* Integrated Family Medicine: Pets in the family and humane education</p> <p>Part 2Each student will choose a policy area of interest and prepare a 20 page paper summarizing the issue. The paper should focus on the latest updates in the area and must be referenced. The student is encouraged to include primary sources such as interviews or raw data to support their analysis. The class will meet as a group to discuss the findings and then the papers will be turned in to Dr. McCobb.</p>	

132244	Worcester Animal Rescue League
Subject: VET	Catalog Nbr: 1129
<p>Students taking this selective will have the opportunity to investigate the inner working of an urban shelter that does both private humane society work, and serves as an animal control facility for the city of Worcester and several surrounding communities. The benefit of this type of shelter is that it provides you with the opportunity to see the differences between animals that are owner relinquishments, and those that are picked up as strays by an animal control officer. Adoptions and the entire adoption process can also be observed. You may have the opportunity to see animals at the shelter that are part of an animal cruelty investigation. Participation in this selective will give you an opportunity to observe the flow of animals through the shelter, from adoption to intake processing, to behavioral evaluations of dogs, to life on the adoption floor, and finally to adoption. You will be allowed to participate in the medical care of the animal on intake (perform physical exams, and do routine lab work). Depending on when you are taking the selective, you may be able to assist veterinarians in the spaying and neutering of animals. This selective can either be taken during the semester (on Tuesday afternoons, or Wednesday mornings), or during the summer.</p> <p>Worcester Animal Rescue League 139 Holden St, Worcester, MA 01606 Telephone: 508 8874570 x84570</p>	

132259	Creation of a Veterinary Microbiology Website
---------------	--

Course Bulletin

Subject: Catalog Nbr:
VET 1130

This one-credit pre-clinical selective is available for one first or second year veterinary student during the spring semester. Students who participate in this selective will assist with the development of a website devoted to veterinary microbiology. Activities include accumulating clinical information and development for interactive case exercises, collection and formatting of information on pathogens of veterinary interest, and website design and content input. Depending on which area students choose to focus on, students are expected to gain an in-depth understanding of the clinical and microbiological aspects of specific veterinary pathogens. Students will gain familiarity with veterinary hospital case records, learn the process of taking information from multiple sources and condensing it into a format suitable for the web, and/or learn web-design and content input.

132275**Enterohemorrhagic E. coli**

Subject: Catalog Nbr:
VET 1131

The pathogen enterohemorrhagic E. coli (EHEC) is considered one to the emerging pathogens of the developed world. In recent years outbreaks associated with eating hamburgers from fast food restaurants have been well publicized in the media. In young children and the elderly infection with the organism can lead to kidney failure and death. In a percentage of cattle, the organism can be found in fecal samples. The main source of human infection is from contaminated hamburger meat. The contamination occurs at the slaughter house during the processing of cattle carrying the organism. My laboratory is interested in understanding the human pathogenesis of this organism. We are currently generating virulence factor knock out mutations in the wild-type organism and studying the virulence of such mutants. We are also developing vaccine strains which will be used on cattle to prevent the colonization of EHEC strains. The student should have an interest in learning techniques in molecular biology and microbiology. Best available time, fall, spring and summer semesters.

132288**Genes and Behavior: What Animals can Tell us about Autism?**

Subject: Catalog Nbr:
VET 1132

The goal of this selective is to expose students to the current understanding of how animal behaviors are influenced by genetic makeup and environment, and techniques one can apply to analyze the causes of abnormal behaviors and to develop effective intervention programs. A strong emphasis is given to testing social behaviors in animals and determining how an animal's experience affects its chromatin structure and gene activity. Students are expected to: # Gain a good understanding of how genetic variations and experience affect brain development and behaviors # Learn laboratory procedures of gene activation analysis and mouse social behavior assessment # Learn how to present scientific findings and how to search for literature. This selective is offered yearly to first and second year students (Fall and Spring). It consists of weekly Journal Club-style discussions and hands-on laboratory research project. Grades will be determined by discussion (30%), oral presentation of an assigned paper (20%), and final report of lab project (50%).

132303**Gonadal Function**

Course Bulletin

Subject: Catalog Nbr:
VET 1133

Central integrative processes controlling gonadal function: role of peptidergic neurons, with emphasis on the endogenous opioid system. Prerequisite: organic chemistry, molecular biology, neuroscience. Best available time, Summer semester.

132317	Infectious Diseases - Cryptosporidium Parvum
---------------	---

Subject: Catalog Nbr:
VET 1134

Molecular biology of Cryptosporidium parvum. Prerequisite: Some lab experience; palpating, calculation of molarities and concentrations, use of pH meter, low-speed centrifuge or similar equipment. Best available time, Fall semester.

132328	Ophthalmology
---------------	----------------------

Subject: Catalog Nbr:
VET 318

This is a comprehensive, clinically-oriented course presented on an anatomic basis. The foundation for the course was provided in previous lectures on ocular anatomy, embryology and histology. The course implies students feel confident with and have reviewed the previously taught material. Representative diseases in major species are presented with emphasis on clinical presentations, pathophysiology and disease mechanisms, differential diagnosis and treatment.

132331	Issues in Wildlife Policy
---------------	----------------------------------

Subject: Catalog Nbr:
VET 1135

Through a combination of readings, lectures, and discussions, students will be introduced to policy making, and the roles played in policy making by veterinarians, scientists, and other technical professionals. The powers of state, federal, and local governments to regulate treatment of wildlife will be described, along with the government mechanisms in place to implement policies relevant to wildlife. Each student will then pursue an independent literature review on policy relevant to a topic of interest, including but not limited to wildlife conflict resolution, wildlife trade, wildlife conservation, control of wildlife diseases, and environmental impacts on wildlife. Each student will prepare her literature review as a written paper (approximately 10 pages) and present her analysis orally to classmates and the course director. Learning is assessed through a short take-home essay exam (20%), a literature review (40%), class participation in discussions (30%), and an oral presentation (10%). Readings will consist of journal articles, book chapters, and mass media publications that illustrate how the views of different stakeholders are incorporated into wildlife policy. Core readings will be assigned to all students at the beginning of the semester; each student then will be assigned or locate specific readings according to her field of interest. The syllabus, core readings, and other materials will be made available on TUSK, or copies provided in the library of the Center for Animals and Public Policy.

Course Bulletin

132346	Infectious Diseases - GI
Subject: VET	Catalog Nbr: 1136
Research in infectious disease with particular reference to infections of the GI tract in animals and man. Best available time, Fall and Spring semester.	

132360	Massachusetts Eye and Ear Infirmary
Subject: VET	Catalog Nbr: 1137
<p>Cochlear implants are devices implanted in the inner ears of profoundly deaf people to stimulate the auditory nerve electrically and thereby provide them some measure of hearing. This laboratory uses rats to address questions about fundamental aspects of such stimulation that for technical or ethical reasons cannot be addressed in humans. Anatomical, electrophysiological and behavioral methods are all employed to study the effects of stimulation through permanently implanted intracochlear electrodes. Suitable projects for students are not always available, but inquiries are welcome at any time.</p> <p>Massachusetts Eye and Ear Infirmary 243 Charles St, Boston, MA 02114 Telephone: 6175733864</p>	

132369	L.A. Clinical Anatomy
Subject: VET	Catalog Nbr: 319

132375	Orthopedic Research
Subject: VET	Catalog Nbr: 1138
<p>Would you like to learn how new orthopaedic medical devices and drugs are developed and approved for use? Would you like to actively participate in the process? If the answer is yes, Dr. Kirker-Head invites you to join him in an Orthopedic Research Selective built around one or more of the several orthopaedic studies he has ongoing within the Orthopedic Research Laboratory here on campus. Students will be expected to actively participate in one or more of the following: the handling and examination of research animals (sheep and/or horses), induction and maintenance of anesthesia, sterile preparation, surgical procedures, post-surgical care, drug administration, record keeping and a variety of imaging procedures including radiography, fluoroscopy, helical computed tomography, and dual energy x-ray absorptiometry. If this sounds overwhelming - don't panic - others have gone before you. On the job training will be received from Dr. Kirker-Head and colleagues in radiology and anesthesiology where appropriate. Back-ground reading and discussion opportunities will be offered. Genuine enthusiasm is a must.</p>	

132388	Research in Veterinary Medicine - Project Preparation and Implementation
---------------	---

Course Bulletin

Subject: Catalog Nbr:
VET 1139

The half-credit offering is one afternoon per week. This selective is recommended for students who would like to participate in ongoing research projects either on or off campus. It is also strongly recommended for students doing summer research projects (NIH and Army funded for example) and students in the International Veterinary Medicine Postgraduate Program. In the late fall, the students will receive help and encouragement in research project identification and support in proposal writing. In the spring, the students will continue to develop skills in research methods, scientific writing, statistical methods, critical evaluation of scientific literature, and preparing for their proposed summer research. In addition, this selective will prepare the student for international research by providing a pre-departure briefing and a re-entry seminar.

132402

Respiratory Medicine

Subject: Catalog Nbr:
VET 1140

To gain first-hand experience in the design and implementation of a novel research project in the field of respiratory medicine. Student will be involved in literature review, experimental design, animal handling, research procedures, collaboration efforts, client communication, data analysis and write up. Monthly meetings with Respiratory Disease Investigation Group (RDIG) will broaden the exposure of selective student to other projects.

132417

Self-Styled Pre-Clinical Selective in the Bug Lab

Subject: Catalog Nbr:
VET 1141

Self-styled Pre-Clinical Selectives are available to first or second year veterinary students during the Spring semester. Although Spring semester is preferred, depending on the project and level of student expertise, it may be possible to accommodate students during Fall semester-please consult instructor. Depending on which semester and what year Selective should be project oriented and are expected to utilize the space and equipment available in our research laboratory. Students are welcome to suggest their own projects, participate in on-going research projects, or undertake a suggested project. Participation in this selective requires that students consult the instructor during the previous semester to ensure development of a suitable project. Students are expected to learn how to efficiently obtain and read scientific literature, develop a research project, design controlled experiments, and learn basic laboratory techniques, which depending on the specific project undertaken, may include but not be limited to, ELISAs, SDS-PAGE, Western blots, basic microbiological and or tissue culture techniques.

132425

Small Animal Clinical Procedures Lab

Subject: Catalog Nbr:
VET 321

This course provides an introduction to a wide variety of procedures commonly used in small animal medicine and an opportunity to practice techniques on donated dog and cat cadavers. Check lists are utilized to guide students in performing cerebrospinal taps, bone marrow aspiration, transtracheal aspiration, nasogastric tube

Course Bulletin

placement, dental and dermatologic procedures and a range of other technical skills. This laboratory is a prelude to evaluation of the student's skills in performing medical procedures in their fourth (clinical) year.

132431	The Angiogenesis Foundation
Subject: VET	Catalog Nbr: 1142
<p>The Angiogenesis Foundation, a non-profit institution based in Cambridge, MA, is offering a selective to students interested in helping to develop internet-based educational programming on animal health. The Foundation is currently seeking three selective students to help create and implement a new portion of the Foundation's web site dedicated to animal health. Students will help write, edit and graphically present educational content about common diseases in dogs and horses and the role of new angiogenesis medicines in treating these conditions. This selective is a great opportunity for students to explore the use of multimedia in educating the public about veterinary medicine and an opportunity to learn about a premiere area of medical research - angiogenesis. No previous web training required. This selective is offered for fall, spring, summer or over school breaks. The Foundation's office is open Monday through Friday from 8:00am to 7:00pm (or later as required) and the staff is flexible in working with student's schedules. More information about the organization can be found on the Foundation's website: http://www.angio.org/. Interested students must contact the organization before signing up for the selective.</p> <p>The Angiogenesis Foundation One Broadway Street, 14th Floor Suite 200, Cambridge, MA 02138 Telephone: 6175765708</p>	

132445	Medical Topics in Shelter Medicine
Subject: VET	Catalog Nbr: 1143
<p>The shelter medicine selective course is an intensive course focusing on applied small animal medicine in the shelter setting. The format is readings, lectures and group discussion. Parts of the course will be integrated with the shelter policy selective. The course will involve ten course sessions as well as some out of class preparation time. Possible Course Topics: * Shelter Medicine 101: Overview and opportunities in shelter medicine* Concepts of Herd Health and epidemiology in shelters* Feline URI/Other infectious disease* Emergency care and triage in a shelter setting* Diagnostics and pathology in the shelter* Vaccination in shelters and foster homes* Sanitations standards in shelter settings* Transport issues and health* Zoonotic disease concerns/immunocompromised humans* Public health regulations and reportable disease</p>	

132453	Standardized Client Interviews
Subject: VET	Catalog Nbr: 322
<p>Successful communication between veterinarian and client is essential for an accurate diagnosis, improving clinical outcomes, practice success, mutual satisfaction, and decreasing malpractice risk. This course is designed to teach the student specific procedures and skills used to communicate successfully with the client, i.e., elicit and understand the client's perspective, and acquire a useful medical history. A lecture and demonstration on the conduct of a good client interview emphasizes both content and behavior. Specific</p>	

Course Bulletin

techniques to engage, empathize with, educate and enlist the client are discussed. The lecture is followed by two opportunities for each student to have a simulated client interview, in which the "client" is a trained health care professional who follows the interview session with a personalized critique of student performance and specific suggestions for improvement.

132459	TCSVM Anesthesia-Small Animal			
	Subject:	Catalog Nbr:		
	VET	1144		
Involvement with large/small animal anesthesia case-load.				

132472	Animal Behavior			
	Subject:	Catalog Nbr:		
	VET	1145		

132483	Introduction to Small Animal Anesthesia and Surgery Techniques			
	Subject:	Catalog Nbr:		
	VET	323		
	2016 FALL	Primary	April Paul	April.Paul@tufts.edu
This course provides an introduction to basic surgical and anesthetic techniques. During the year, each student performs an ovariohysterectomy in two dogs and anesthetizes two additional dogs for ovariohysterectomy. Students are also responsible for pre- and postoperative care of the dogs.				

132487	Critical Care			
	Subject:	Catalog Nbr:		
	VET	1146		
Involvement with small animal emergency receiving and small animal ICU patients.				

132503	Facilitating the Placement of Found Animals in the Foster Hospital for Small Animals			
	Subject:	Catalog Nbr:		
	VET	1147		
Stray animals are often found by individuals and brought to the FHSA. These animals often need some degree of medical treatment but are treatable and healthy enough to be adopted as pets. The care and placement of these animals is overseen by Dr. Mary Labato and a few of the ward technicians. This job entails duties and the swift and successful placement of these animals which could be expedited by the aid and input of a few student volunteers. This selective includes:# Calling surrounding veterinary clinics and shelters to try and locate the animal's owner# Filling out a medical history and behavior sheet and student contacts for adoption information# Communicating with technicians and covering veterinarian concerning the animals medical needs and time allowed in the hospital# Spending time with these animals: walks, treats and				

Course Bulletin

observation
Other selective goals include:
Creating a list of surrounding veterinary clinics and shelters with phone numbers to simplify the process of locating animal owners
Creating a waiting list of willing foster homes for animals who can no longer stay in the hospital but have not yet been adopted
Organizing bake sales and other events to raise money for the Travis Fund (a Tufts Account which donated money is used to pay for the medical needs for these potentially healthy animals)

132509	Bovine Procedures Lab		
Subject: VET	Catalog Nbr: 324	2016 FALL	Primary I Embree
			i.embree@tufts.edu
<p>The objective of this course is to provide third-year veterinary students the opportunity to perform techniques commonly used in the practice of bovine medicine on live animals. Laboratories consist of separate sessions covering general medical procedures, theriogenology, obstetrics and anesthesia. General medical procedures include instruction on history taking and physical examinations, restraint and handling and techniques used in diagnosis and treatment of bovine diseases. The theriogenology session covers the technique of rectal palpation of the reproductive tract. The obstetrics session covers the fundamental principles of bovine obstetrics including mutation and fetotomy using fetal cadavers in a phantom uterus. The course is designed to allow students to perform and practice the above procedures in preparation for clinical rotations during their senior year. Small groups of students are assigned a cow and are responsible for the well-being and medical records of that animal for the duration of the course. Time is scheduled for students to practice the learned techniques with supervised instruction. At the end of the course, the student should be able to demonstrate each of the procedures or techniques covered.</p> <p>This class meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>			

132517	ICU Treatment Crew		
Subject: VET	Catalog Nbr: 1148		
Treatments, monitoring and animal handling in FHSA-ICU. Second and third year students only.			

132533	TCSVM Neurology		
Subject: VET	Catalog Nbr: 1149		
<p>Second year students only. This selective will be offered one hour per week in a classroom to discuss a hospitalized case. It is a clinical selective that exposes students to one neurology case per week. History, neurological exam, differential diagnoses, diagnostic tests, and management are discussed as they relate to that patient.</p>			

132537	Clinical Dermatology		
Subject:	Catalog Nbr:		

Course Bulletin

VET	325			
	2016 FALL	Primary	Lluis Ferrer	Lluis.Ferrer@tufts.edu
<p>General principles of dermatologic therapy and diagnosis are reviewed. The common dermatologic diseases encountered in small and large animal veterinary practice are discussed. Emphasis is placed on problem solving using basic knowledge of cutaneous structure, function and pathophysiology as well as the etiology, recognition of cutaneous lesions, history, clinical findings, and laboratory tests applicable to specific diseases or groups of diseases. Specific diagnostic and therapeutic modalities for many of the diseases are discussed.</p> <p>This class meets at Tufts VETS, Walpole, MA.</p>				

132547	Oncology (Chemotherapy)			
Subject:	Catalog Nbr:			
VET	1150			
<p>First and second year students only. This selective is a full hands on selective. Students will learn the basics of making up and administration of chemotherapeutic drugs, catheter placement, and blood collection. The selective will emphasize safety and knowledge of the drugs used in oncology, and strengthens their technical skills as well.</p>				

132553	Zoological Medicine			
Subject:	Catalog Nbr:			
VET	326			
	2016 FALL	Primary	Florina Tseng	flo.tseng@tufts.edu
<p>This course deals with the comparative veterinary medical aspects of all non-traditional species, including wildlife, zoo animals, laboratory animals, birds (including poultry) and exotic companion animals. The course systematically covers captive and free-ranging disease issues of the major taxonomic groups from invertebrates to primates. Emphasis is placed on the value of understanding the material in the context of general veterinary medicine and becoming effective animal advocates regardless of the student's particular interest or chosen specialty.</p>				

132561	TCSVM Radiology			
Subject:	Catalog Nbr:			
VET	1151			
<p>Diagnostic Imaging experience. Second or third year students only.</p>				

132576	Paws for People (Animal Facilitated Activities)			
Subject:	Catalog Nbr:			
VET	1152			
<p>Classes are taught by Delta instructors on becoming a registered visitor; what the animal handler needs to know, following this class students will be eligible to apply to the Delta Society for registration as a trained visitor. There is a \$80 fee for students to take this Delta Course. This includes a book and paying the lecturers.</p>				

Course Bulletin

However, the course director has agreed to waive the 80 fee if students are willing to use a borrowed workbook from Paws for People, rather than purchase their own book. There is also a fee payable to the Delta Society if the student chooses to become registered with them. Registration is voluntary and not required as part of the selective. After completing the training the student will help perform evaluations of volunteers and their dogs. The student will spend two days assisting with evaluations and will also observe two visits for a total of 20 hours. The last eight hours of the selective will consist of visitation by the student and a short (20 minutes only) presentation to the Tufts Paws for People Advisory Board summarizing their experiences.

132582	Veterinary Economics and Practice Management			
Subject:	Catalog Nbr:			
VET	327			
2016 FALL	Primary	Armelle De Laforcade	armelle.delaforcade@tufts.edu	
<p>This course is designed to acquaint veterinary students with business and economic issues involved in the practice of veterinary medicine. Particular attention is placed on the veterinary service model, practice management, client communications, marketing, veterinary fees, and the role of staff. In the second half of the course the emphasis will shift to topics related to practice management. A series of guest lecturers will expose students to 'real life' business and management concepts as they relate to small animal practice, equine practice, and ambulatory practice. A project will be assigned to allow students to pursue learning in additional topics related to veterinary practice management.</p>				

132590	TCSVM Small Animal Medicine			
Subject:	Catalog Nbr:			
VET	1153			
<p>Can take up to six students (morning or afternoon) during the summer semester and three students during the fall and spring Semester.</p>				

132596	Euthanasia Seminar			
Subject:	Catalog Nbr:			
VET	328			
<p>This course is organized and moderated by faculty from the Tufts Center for Animal and Public Policy. The format is a day-long seminar mixing didactic lectures, panel presentations and class discussion. Topics covered include: ethical issues around euthanasia, appropriate drugs and non-pharmacological methods of euthanasia, appropriate euthanasia protocols and techniques for specific species (companion animals, equine, bovine, wildlife, and exotics are highlighted) as well as regulations. Euthanasia in specific settings, for example small and large animal practice, laboratory medicine, animal shelters, zoos and disasters will be discussed. The seminar includes participation from practicing veterinarians, as well as some training on client communications. There are also opportunities for students to ask questions and discuss concerns with presenters. The goal of the course is to familiarize students with the ethical, logistical and emotional aspects of animal euthanasia as well as to prepare them to observe and participate in euthanasia during their upcoming clinical year.</p>				

Course Bulletin

This course meets at Tufts VETS, Walpole, MA.

132607	TCSVM Small Animal Surgery
Subject: VET	Catalog Nbr: 1154
Involvement in clinics of along with small animal surgery staff, faculty and fourth year students.	

132608	Ethics and Veterinary Medicine
Subject: VET	Catalog Nbr: 329
This course acquaints students with ethical issues in various aspects of veterinary medicine through short faculty presentations and reading assignments. Students then analyze and discuss these current ethical issues in small groups. The course emphasizes the process of problem solving in addressing ethical issues and encourages thoughtful and respectful debate.	

132621	TCSVM Small Animal Wards
Subject: VET	Catalog Nbr: 1155
Treatments and animal handling involving small animal inpatients. Three half-semester one afternoon per week offering.	

132635	Hands-on Biostatistics
Subject: VET	Catalog Nbr: 1156
Offered to second year students. This selective is designed to be both an adjunct to VET 216 (Epidemiology and Biostatistics) and a continuation. Statistics will be learned using an active approach, emphasizing practical applications of the concepts learned in VET 216. Students will gain experience in analysing data sets and presenting data. In addition, students will become familiar with using Excel for basic statistical analyses and SPSS for more advanced statistics. Laptop computers are required.	

132636	Clinical Animal Behavior
Subject: VET	Catalog Nbr: 341
Topics focus on the diagnosis and treatment of common clinical behavior problems in dogs, cats and horses. Aggression, fears and phobias and compulsive disorders are covered for all three species. Principles of learning, evolution of behavior and behavior genetics are discussed where applicable. Pharmacologic approaches to managing behavior problems are discussed.

5000 patients annually: 55% avian, 20% rabbit and rodents, 10% ferrets, 10% reptiles, 5% other (fish, primates, amphibians, wildlife). There is exposure to birds, reptiles, small rodents and companion exotic animals. There is exposure to a wide variety of areas of medicine in this field, including consulting for aviculturists, pharmaceutical companies, industrial breeders of rabbits and the pet trade. The bulk of the practice consists of vigorous medical and surgical clinical cases. We offer the very bust medical and surgical services for birds, exhibit and companion exotic pets including reptiles, amphibians, fish, rabbits, rodents, ferrets and non-domestic mammals. The practice is limited enabling us to focus on these animals unique needs. The externship program aims to expose students to exotic patients commonly and rarely seen in a private practice situation, which greatly differs from a university setting. Students are encouraged to interact with clientele, to observe and assist the staff as needed and to participate in the private practice environ. The

133047	Small Animal Medicine Rotation
Subject: VET	Catalog Nbr: 401
16-17 TERM	Primary Mary Labato mary.labato@tufts.edu
<p>Each student is assigned to one service in internal medicine every week. Students see and follow cases assigned to them and are involved in decision-making in diagnostic procedures and treatment. Students are responsible for daily evaluation and treatment of their patients, and client communication as directed by the clinician. Daily discussion rounds enable students and faculty to share knowledge and discuss cases. Each student also presents an in-depth medical case discussion at the end of the rotation. Some weekend coverage will be assigned. The emphasis in the core rotation is on internal medicine. Sub-specialties, oncology, cardiology, neurology, ophthalmology, and dermatology will also be available in another sub-specialty rotation and for additional elective rotations.</p>

Course Bulletin

VET	4023
<p>General zoo animals. Assist veterinarian in duties; treat cases requiring care. Duration: 6 weeks to 6 months Reference: AAZV Guide Cover letter, CV 1875 Noble Avenue, Bridgeport, CT 06610 Telephone: (203) 394-6563</p>	

133059	Kensington Bird and Animal Hospital
Subject: VET	Catalog Nbr: 4024
<p>Avian/exotic animal medicine. Kensington Bird and Animal Hospital is a full-service small animal veterinary hospital. We do most of our lab work in house, and perform all manner of avian/exotic procedures as well as canine/feline radiology, soft-tissue surgery, diagnostics, and treatments. Many of our avian/exotic cases are referral. Our avian caseload during 1994 averaged over 50 patients per week. We also see large numbers of exotics, including "pocket pets", reptiles, ferrets, etc. We do a large amount of wildlife medicine, radiology and surgery. 977 Farmington Ave, Berlin, CT 06037 Telephone: (860) 828-7736</p>	

133060	Small Animal Surgery Rotation
Subject: VET	Catalog Nbr: 402
<p>Students are assigned to a staff surgeon and resident. They participate in the diagnostic work-up, surgical treatment and postoperative care of the patients on the service, based upon the caseload presented. They are expected to be familiar with all aspects of the cases under their care, and also those of the other student(s) on the service. All teaching is performed during case rounds and one-on-one at the operating table throughout the day. The students will be required to utilize their didactic background in assessing, then performing the surgical technique (via their assistance), and evaluating the postoperative course – including deductive reasoning along the way (to be able to think the case through to its conclusion). Although the students will not be performing the majority of the techniques they are exposed to, their exposure to these surgical cases will allow them to familiarize themselves with the available technique(s) and formulate a diagnostic approach to the patient, and provide appropriate information regarding treatment and prognosis. Two weeks is spent on two of three services: orthopedic, general surgery, and chief resident.</p>	

133068	Mystic Aquarium
Subject: VET	Catalog Nbr: 4025
<p>With the assistance of both external and in-house funding, the Department of Animal Health of Mystic Aquarium, a division of Sea Research Foundation, is sponsoring a one-year internship/research opportunity in aquatic animal medicine. Applicants for the internship should be graduates of an AVMA accredited veterinary college or ECFVG certified. Preference will be given to applicants with graduate degrees and/or postgraduate clinical experience in a practice or internship setting. Entry level familiarity with ultrasound, radiology, and</p>	

Course Bulletin

endoscopy systems is expected. The stipend for the position is expected to be > \$26,000 per annum plus benefits. The successful applicant will assist the veterinary, research, and husbandry staffs in the diagnosis and treatment of medical cases from the Aquarium's extensive collection of invertebrates, fresh and saltwater fishes, reptiles, amphibians, penguins, seals, sea lions, and beluga whales. In addition the intern will participate in our rescue, rehabilitation, and release program for stranded marine mammals and sea turtles. Collateral opportunities at cooperating area academic, government, and private industry laboratories are possible and encouraged. The intern may have an opportunity to develop teaching skills by his/her involvement in the Aquarium's veterinary externship program and at informal seminars. The intern will be expected to pursue one or more clinical or research interests and to prepare the results for presentation to our staff and at an appropriate professional meeting as well as for publication in the peer reviewed literature. Past interns have gone on to acceptance into well-recognized graduate/residency programs or employment in the field of aquatic, comparative, or zoological medicine.

Applicants should submit the following material to: DR. ALLISON D. TUTTLE STAFF VETERINARIAN MYSTIC AQUARIUM 55 COOGAN BLVD. MYSTIC, CT 06355 1. A current transcript from the veterinary school and any post baccalaureate program which he/she has attended. 2. Three letters of recommendation from individuals familiar with the applicant's academic performance and his/her potential in the clinical and research arenas. 3. A statement reflecting the applicant's goals in the area of aquatic animal medicine and research. 4. A current curriculum vitae or resume. Potential applicants who will be in the southern New England area are encouraged to contact us for a tour of our facilities and a chance to meet with our staff. All application materials must be received prior to 01 January 2008. The successful applicant will be chosen and notified by 10 Jan 2008 and must commit to the position within 72 hours. The internship period will extend ~ from 1 June 2008 through ~15 June 2009. With prior agreement by both parties an additional year in the program may be possible. Additional information may be obtained by calling Dr. Tuttle at 860-572-5955, or by e-mail at . A general orientation to our facility and programs can be obtained by viewing our web page <http://www.mysticaquarium.org>. Mystic Aquarium is an affirmative action/ equal opportunity employer.

	VET	404		
	16-17 TERM	Primary	Patricia Provost	No Email on file.
	16-17 TERM	Primary	Thomas Jenei	thomas.jenei@tufts.edu
<p>This rotation provides hands-on clinical experience in sports medicine and with diseases of surgical significance in large domestic animals. The student participates in the diagnosis and management of both out and in-patients and is responsible for the day-to-day monitoring of assigned cases. Through daily updates of the written record as well as oral presentations at ward rounds, the faculty gains insight into student development and helps in decision-making pertaining to continued therapy. The goals of the rotation include thoroughly familiarizing the student with common diagnostic and therapeutic procedures and to recreate, as nearly as possible, the responsibilities inherent in the practice of clinical large animal surgery and sports medicine. Regularly scheduled seminars provide in-depth discussions of selected topics and clinical problems.</p>

133228	Animal Resources Center, Harvard Medical School		
Subject: VET	Catalog Nbr: 4045		
<p>Entirely lab animals; 90% rodents, mostly mice, also rabbit, dog, cat, pig and sheep Good opportunity for clinical/pathological correlation in rabbit and rodent diseases, review of lab animal disease syndrome, used computer database in a lab animal practice. Number of Students to be accepted: 1-2 Description: The ARC provides clinical veterinary care, animal care and diagnostic services to the Harvard Medical Area research facilities. The center provides care for 40,000 to 60,000 animals, mostly rodents but also rabbits, dogs, cats, and sheep. Practice includes clinical treatment of assorted species, diagnosis of disease problems endemic in resident populations and suppliers.</p> <p>Resume Cambridge, MA Telephone: (617) 432-1285</p>			

133232	Wildlife Clinic Rotation		
Subject: VET	Catalog Nbr: 407		
16-17 TERM	Primary	Florina Tseng	flo.tseng@tufts.edu
<p>Students in the Wildlife Clinic rotation actively participate in the handling, diagnostics and medical and/or surgical treatment of a wide variety of native New England wildlife, including threatened and endangered species. A large number of sick, injured, and orphaned wildlife are seen. Species diversity varies tremendously from season to season. The Wildlife Clinic rotation includes several didactic sessions including physical examination and bandaging of wild birds, allometric scaling, avian radiology, and avian hematology. Fourth year students act as the primary clinicians on cases. They are directly supervised by Clinic doctors. Students gain experience in handling and examining wildlife species, taking and interpreting radiographs, and various clinical pathology techniques. Students are not required to have previous hands-on experience with wildlife species prior to the rotation but are expected to be able to apply knowledge gained from didactic courses, including comparative medicine, to their cases. Because many of the species that the Clinic sees are not included in veterinary texts, the Clinic maintains an extensive library of wildlife related literature. Students are expected to utilize these resources to enhance their learning experience.</p>

<p>Students will be exposed to typical zoo clinical medicine in a medium sized (1,300 specimens of 280 species) government run zoo. Excursions to local Aquarium and marine mammal park may be possible. Species experience/encountered: zoo mammal (nonmarine), bird, reptile, amphibian.</p> <p>Resume 151 Kapahulu Avenue, Honolulu, HI 96815 Telephone: (808) 971-7171</p>				

133260	Radiology Rotation			
	Subject:	Catalog Nbr:		
	VET	408		
	16-17 TERM	Primary	James Sutherland-Smith	James.Sutherland_Smith@tufts.edu
<p>This 3-week rotation prepares the student to correctly interpret and produce radiographs of large and small animals. Students will have the chance to further improve their ultrasound skills and to appreciate the role of advanced imaging techniques such as nuclear medicine, CT and MRI in a referral-level practice. The student will rotate through the different areas of the diagnostic imaging section and under the supervision of the radiology technical staff, will take radiographs of the daily clinical cases presented to the hospitals and assist with ultrasound and nuclear medicine studies. The student will also provide unsupervised weekend and after-hours weekday coverage of the small animal radiology caseload. Most of the technical aspects needed to produce a diagnostic radiograph in the private practice setting, including radiation safety, will be covered. Film reading exercises with the radiology faculty and residents will be held daily. In addition, there will be independent study periods of a PACS-based teaching file. Non-graded weekly exams will be given in the first two weeks with a graded case-based exam at the end of the rotation contributing 15% of your grade. Grades are based on the input of the entire faculty, residents and technical staff members in radiology and are scored in accordance with a rubric that is available for download on TUSK. A textbook is not required</p>				

Course Bulletin

for this course. A handbook with all pertinent information regarding the rotation is available in TUSK for download. The final year program requirements for evening treatment shifts of hospitalized patients will be completed concurrently with the radiology rotation.

133263	Animal Hospital of Hawaii		
	Subject: VET	Catalog Nbr: 4049	
<p>Canine, feline, avian, lagomorph, rodent, indigenous wildlife, various zoo species. Consulting for International Medicine for the Honolulu Zoo. 133270	Department of Comparative Medicine, Cedars-Sinai Research Institute		
	Subject: VET	Catalog Nbr: 4050	
<p>Lab Animal - 50% small (mice, rats, hamsters); 50% large (rabbits, pigs, dogs) Description: AAALAC Int'l accredited research animal care and use program. 73 primary investigators and associated co-investigators with 230 protocols using animal models. Research is conducted in biochemistry, cardiology, endocrinology, gastroenterology, infectious diseases, ophthalmology, pulmonary, radiology and surgery. Student would be involved in animal receipt, quarantine/conditioning, surgical observation, post-operative management, clinical rounds and clinical records management, protocol evaluation, IACUC deliberations, clinical laboratory work, handling and restraint of lab animals, anesthesia, injection and blood collection, euthanasia, regulatory compliance issues.</p> <p>Resume CA</p>			

133275	Anatomical & Clinical Pathology Rotation		
	Subject: VET	Catalog Nbr: 409	
	16-17 TERM	Primary	Joyce Knoll joyce.knoll@tufts.edu
<p>In this rotation student time is divided between the two disciplines of diagnostic pathology. The anatomic pathology portion of the rotation offers a "hands-on" opportunity to appreciate the concept that altered structure is the basis of altered function. In addition to being taught how to perform a postmortem examination, students are encouraged to correlate patient history, clinical signs and the clinical diagnosis with the gross and microscopic lesions and subsequently facilitate their understanding of the causes of disease and the mechanisms by which they are provoked. Tissue sampling for histologic examination is emphasized, however the sampling of tissues for cytologic, microbiological and toxicologic examination are also discussed.</p>			

Course Bulletin

Students learn how to construct a concise gross autopsy report from postmortem findings, and have the opportunity to present selected autopsy cases at weekly Thursday afternoon pathology rounds attended by first, second and third year veterinary students in addition to hospital clinicians and/or residents involved with many of the cases submitted for autopsy.

The clinical pathology portion of the rotation uses a case-based approach to review the principles and interpretation of laboratory tests including urinalysis, CBC's, chemistry profiles, and endocrinology assays.. Students are given the opportunity to practice techniques such as microscopic examination of blood smears and urine sediment. They are introduced to the underlying principles of hematology and chemistry instrumentation and factors that can affect test results.

Students meet at 8:00 AM in the pathology conference room. Mornings are devoted to discussion of clinical pathology case material. Afternoons are spent in anatomical pathology. The only dress code requirements for the clinical pathology section is that open-toed shoes and shorts are not allowed, Scrubs or coveralls and boots are required for postmortem examination activities. Students will be on-call for autopsies on weekends and holidays on a rotating basis, but are not considered "essential" in the event of weather related campus closings.

Subject:	Catalog Nbr:		
VET	410		
16-17 TERM	Primary	Elizabeth Rozanski	elizabeth.rozanski@tufts.edu
<p>This rotation encompasses a full clinical experience in emergency medicine for small animals. During the three week core experience, students rotate between day, afternoon, and evening shifts in order to experience all aspects of clinical emergency medicine. Weekend duty is required. Students are encouraged to complete as many technical aspects as possible as well as to fully understand the pathophysiology behind a variety of common and not-so-common ER cases. Didactic rounds are held Wednesday and Thursday from 1:00 – 3:00 pm. Students may elect extra weeks in the ER and may choose the schedule that they most enjoy (based upon availability). A separate critical care elective experience with focused time in the ICU is also available. This allows the students to spend a week working one-on-one with the E/CC faculty and residents. An elective experience is also available at out satellite facility, Tufts VETS, in Walpole MA. The hospital is staffed by numerous specialists as well as E/CC residents. Both day and evening shifts are available at Tufts VETS.</p>

133509	Oncology Rotation		
Subject: VET	Catalog Nbr: 417	16-17 TERM	Primary Lisa Barber lisa.barber@tufts.edu
<p>The goals of the oncology rotation are to expose students to the systematic evaluation of companion animals diagnosed with cancer and to gain familiarity with the modalities available to treat cancer in a clinical setting. Students primarily will interact with dogs, cats, and occasionally other species with various types of neoplasia. Students should enter the rotation with a fundamental knowledge of the basic principles of oncology. During the rotation, students will have the opportunity to assess patients in different stages of disease, participate in devising treatment regimens, and to review responses to therapy. Our hope is that the experience gained through an oncology rotation will help new veterinarians advise clients on the range of options available to treat companion animals with cancer and shape owners' expectations regarding the treatment process.</p>

133716	Tufts at Tech Community Veterinary Clinic		
Subject: VET	Catalog Nbr: 426		
16-17 TERM	Primary	Gregory Wolfus	Gregory.Wolfus@tufts.edu
<p>A partnership between the Cummings School and Worcester Technical High School, Tufts at Tech Community Veterinary Clinic has been formed to create a small animal outreach clinic which can support the low income pet population in the greater Worcester area. The clinic offers a 2-week primary care practice rotation (currently elective) which is designed to provide fourth year clinical students with an opportunity to gain hands-on clinical experience in preventative health care medicine in a private practice setting. Under the direct supervision the clinic director or other staff doctors, students will perform preventative health care exams, develop diagnostic and treatment plans, communicate plan and fees to the clients, tailor a wellness plan that addresses the individual needs of the patient, as well as perform common procedures in a general practice setting. In order to provide the potential for students to get follow-up on their cases, the rotation is set up as a 2-week block. During the rotation, students will not only develop a better understanding of wellness health care, but will also develop communication skills by interacting with and informing owners regarding issues such as vaccination protocols, parasite control, proper nutrition, dermatologic concerns, behavior issues, weight management, senior pet concerns and general dentistry. In addition, the students will have the opportunity to support the OneHealth initiative by contributing to the education of high school students while offering primary veterinary care to a historically under-served pet population.</p>			

133721	Rochester Equine Clinic

Subject: VET	Catalog Nbr: 427
<p>A capstone pre-graduation core 1-week course has been added to the 4th year curriculum and will begin with the class of V13. The required program will avoid lecture format and emphasize panel discussions and role-play for interviews and client conversations. The emphasis will be on communication, financial skills, work-life balance, and leadership skills. Alumni and members of the MVMA will be recruited for discussions and mentorship. A major goal of the program is to provide content that is attractive to graduates going into practice or internships with emphasis on small animal, equine, or food animal medicine, and carrier pathways such as pathology and laboratory animal medicine. Specific topics include finances and debt management, family-life-career balance, insurance planning, mentoring, the art of negotiation, difficult financial negotiations, practice ownership, and changing jobs.</p>

<p>As of January 1, 1993, we have established a haul-in facility. This facility is in conjunction with an already established horse farm and includes stanchion, exam area, surgery suite, and an indoor arena to be used for performing lameness exams. We see a wide sector of the equine industry including: broodmare farms, thoroughbred lay-up facilities, saddlebred show, hunter-jump, dressage, and pleasure horse stables. We do a large amount of reproductive and lameness work. The practice encompasses a wide area just south of Chicago, IL.</p> <p>Will Provide: Housing and Salary of \$100 weekly. Please phone before writing. We are very busy and are far more apt to return a phone call than respond to a</p>

135531	Gross Anatomy I
Subject: VET	Catalog Nbr: 101
<p>This course consists of lectures and systematic dissection of the dog and cat, designed to gain a comprehensive knowledge of macroscopic anatomy of the carnivores (mainly dog, but important structural differences of the cat included). The objectives of this course are to understand and correctly use anatomical terminology, understand the organization of the skeleton (osteology), classification and function of various joints (arthrology), identification and attachments of axial and appendicular muscles (myology) and their innervation, effects of lack of innervation, the central versus peripheral nervous system, major nerves of the body (neurology), major vessels and their branches to organs (angiology), and organization of respiratory, digestive and urogenital tracts (splanchnology).</p> <p>Prerequisite: A sound knowledge of biology including taxonomy, microscopic anatomy of tissues and developmental anatomy is essential. At the end of the fall semester, the student is also expected to be able to integrate course material from microscopic and developmental anatomy with the gross anatomy.</p>

135647	Veterinary Biochemistry & Metabolism
Subject: VET	Catalog Nbr: 102
<p>This course explores the biochemical basis of life from a functional perspective. Homeostatic control mechanisms governing the mammalian internal environment are examined at the cellular, tissue and organ system level, with primary emphasis placed upon key biochemical principles of protein, carbohydrate and lipid metabolism. Topics include amino acid and protein chemistry, nucleotide and nucleic acid metabolism, carbohydrate and heme chemistry, vitamins and trace elements, membranes and signal transduction, lipids and intermediary metabolism (i.e. starvation and exercise). Consideration of major biochemical pathways includes the biomedical importance each holds for respective cells, tissues and organ systems involved, a description of key regulatory reactions within each pathway, where reactions occur within respective cells, the tissue or organ specificity of the pathways, how each is controlled, the physiological situation under which each is inhibited or activated, and how pathways are coordinated so that homeostasis is maintained. Clinical examples are sometimes introduced to emphasize connections between common disease states and biochemical abnormalities.</p> <p>Required:</p> <p>Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9).</p>

135768	Animal Emergency Center
Subject: VET	Catalog Nbr: 4347
<p>Small animals and exotics on emergency. High volume practice for emergency medicine. Our Center provides the extern an excellent opportunity to "roll up their sleeves" and get actively involved in the resuscitation and care of the emergency patient. Though the majority of actual procedures will be done by the staff veterinarian or nurse, the externs have the opportunity to assist, observe, and learn innovative techniques and procedures. Emergency and critical care diagnostic, monitoring, surgical, and nutritional procedures rarely done in the practice or typical academic environment can be seen on almost a daily basis. In addition, the extern is mentally challenged by actively participating in case discussions, academic rounds, Drs./nurses cage rounds, self study programs, and a typical "question of the day". The number of externs present for any given week can vary from 2 to 3, and participate in 12 hour shifts, 5 days per week. The extern is invited and encouraged to attend weekly case conference, Grand Rounds presentations/discussions, and nurse CE meetings. Veterinary students will be evaluated based on the form provided by the university. Students can be evaluated at any level the university directs. A general list for evaluation would include: Professionalism, Punctuality, Enthusiasm, Willingness to learn, Level of basic medical knowledge and surgical skills, Ability to take histories and perform physical exams, Willing to learn about and help with all aspects of daily hospital operations. The Center is located in a 10,800 square-foot state-of-the-art facility equipped with a large waiting area, four exam rooms, two surgical suites, a large treatment room, a 40-cage ICU, isolation unit, ward runs, imaging room, lab, family/visiting room, offices, conference room, break/exercise room, and library. The hospital case load ranges from 500-1200 cases per month; primary case load by referral from area primary-care veterinarians.</p> <p>2100 W. 135792	Developmental Anatomy
Subject: VET	Catalog Nbr: 104
<p>This course has two components: a). The first section of the course will cover general embryology. Topics discussed include gametogenesis, fertilization and early embryonic development (blastulation and gastrulation), implantation, and placentation among different domesticated animals. In this part of the course, basic cellular and molecular mechanisms involved in cell division, cell morphogenesis, cell-cell interaction, apoptosis, and organ development patterning will be reviewed b). The second part of the course will focus on organ development. Topics include the development of body cavities, axial and appendicular musculoskeletal system, as well as respiratory, gastrointestinal, cardiovascular, urogenital, endocrine, central nervous systems and head and neck development. Emphasis will be placed on normal development that compliments gross anatomy, and clinically important developmental defects that are important for the DVM student to understand. Mammalian fetuses and placentas will be demonstrated to the students during gross anatomy laboratory sessions. This will integrate gross anatomical and developmental aspects of the animal.</p> <p>Prerequisite: A reasonable understanding of the gross anatomy of the mammalian body is essential. In addition, a sound understanding of cell and tissue biology is desired.</p>

135911	Human-Animal Relationships
Subject: VET	Catalog Nbr: 106
<p>This course is designed to enrich the student's understanding of relationships with animals and to stimulate creative thinking about the expanding horizons of human-animal interactions (HAI). Class sessions, which include a major allocation of time for student discussion, touch on a range of issues affecting companion animals, wildlife, farm animals, horses, research animals, public health, and social and cultural values regarding nonhuman individuals and communities. Students are asked to think about and discuss the broader issues of veterinary medicine, such as the role(s) of the individual veterinarian, veterinary education, and the veterinary profession. The goal of the course is to develop each student's ability to consider the diverse relationships among people, veterinarians and animals.</p> <p>Required text for course: Ethics of Animal Use, P. Sandoe and S. Christiansen, Blackwell Publishing, 2008.</p>

135940	Gross Anatomy II
Subject: VET	Catalog Nbr: 107
<p>This course, which consists of lectures and systematic dissection of the horse and a ruminant species (usually a calf or a goat), is designed to gain a comprehensive knowledge of the macroscopic anatomy of the equine and ruminant species. Clinically important anatomical differences in the Llama and the pig are also presented. The course also includes comparative anatomy of the head region of carnivores and herbivores, including the cranial nerves and the CNS.</p> <p>The objectives of the course are to understand the basic and clinical anatomy of all regions of the body, including the visceral organs of the domesticated ungulates. Innervation and blood supply to organs are stressed where they are clinically important. Major differences in equine versus the ruminant musculoskeletal system and visceral organs are discussed in relation to functional adaptation of these species. Clinically relevant and species-specific anatomical differences in the pig and llama are emphasized in lecture and laboratory sessions, in addition to addressing structural and clinical importance. The large animal component of the course requires active student participation in teaching each other.</p> <p>Prerequisite: A sound knowledge of basic anatomy of the carnivores is essential in order to appreciate the similarities and differences in large animals. The student is expected to review comparable canine anatomy before attending each large animal gross anatomy lecture and laboratory session.</p>

Immunology

Subject: Catalog Nbr:
VET 109

The objective of this course is to give students an introduction to the functions of the immune system. The first half of the course focuses on the basic concepts in innate and adaptive immune mechanisms. The functions of antigen-specific cells of the adaptive immunity, T and B lymphocytes, are discussed in particular, as well as the unique features of antigen-specific receptors of the lymphocytes, such as, how antigen-specific lymphocytes recognize antigens, and how the lymphocytes help in elimination of pathogens from the body. The importance of cytokines of innate and adaptive immunity in health and disease is also covered. In the second half of the course, the basic concepts learned in the first half are applied to the practical aspects of transplantation and immunization, as well as to clinical problems, resulting either from defects in the immune system (immunodeficiency) or as a consequence of immune responses (hypersensitivity and autoimmunity).

Physiology

Subject: Catalog Nbr:

VET 110

This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments, neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included.

Required:

Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9).

136711	Comparative Anatomy and Physiology
Subject: VET	Catalog Nbr: 134
<p>As an endeavor, comparative anatomy is fundamentally a study of adaptation and evolution. Thus we will emphasize the structural and functional similarities among vertebrates and reinforce how important it is for veterinarians to be able to use their knowledge to extrapolate among species and taxonomic groups. Lectures will include an introduction to the functional anatomy and physiology of major vertebrate taxa (fish, amphibians, reptiles, birds and mammals). Emphasis is be placed on: clinically relevant topics, species which graduates are likely to encounter, areas in which the taxa vary dramatically from their domestic animal counterparts and issues (e.g., cardiovascular anatomy) which may contribute significantly to students' understanding.</p>

In 1994, Dr. Robert J. Orsher opened the doors to the Veterinary Specialty and Emergency Center (VSEC), a 24-hour multi-specialty referral and emergency small animal hospital in Bucks County, Pennsylvania. His goal for this veterinary specialty hospital was to bring board-certified specialists from multiple disciplines under one roof to practice as a cohesive team.

Veterinary specialists in cardiology, dermatology, diagnostic imaging, emergency & critical care, holistic medicine & acupuncture, internal medicine, neurology/neurosurgery, oncology, surgery and radiation oncology have joined together to actualize Dr. Orsher's vision. VSEC offers leading-edge medicine while working closely with pet owners and their referring veterinarians to ensure the highest level of communication and care.

Course Bulletin

136746	International Veterinary Medicine
Subject: VET	Catalog Nbr: 135
<p>This course reviews the roles of veterinarians in global development and the contribution of our profession to "One Health". It provides an overview of the roles of animals in the world's various environmental, economic and demographic contexts. The ecological foundations of the major animal production systems are explained. Disease constraints to production and commerce are reviewed. The structure and function of animal health services are correlated with economic and social structures. Emphasis is placed on the development of socially, environmentally, technically and economically sound solutions to livestock and wildlife related problems in the developing world.</p> <p>Specific topics include global animal management and production systems, the role of veterinary medicine in a global economy, delivery of veterinary services in developing countries, wildlife disease and ecological health, disaster medicine, livestock programs in humanitarian crises and global environmental conventions. Every lecture will include a "disease of the day", chosen because of its international importance, and relevance to the overall theme. The course concludes with discussions about the view from the United States, where students see the connection between overseas issues and their own future practice.</p>

Small animal (dogs & cats only). We are an animal welfare organization concerned with animal over-population. The clinic was set-up by the state as a pilot spay/neuter clinic.

433 Hillside Ave, Hillside, NJ 07205

Telephone: (908) 964-6887

136775	Veterinary Histology
Subject: VET	Catalog Nbr: 136
<p>The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.</p>

137089	Veterinary Neurobiology
Subject: VET	Catalog Nbr: 205

Course Bulletin

This course provides an overview of veterinary neuroanatomy, pathobiology of neurological diseases, and clinical neurology. Neuroanatomic structures and pathways are discussed with a functional emphasis so that the student develops an understanding of how and why nervous system lesions produce neurological dysfunction. The response of the nervous system to injury and the pathogenesis of common small and large animal neurological diseases will also be covered in this course. The clinical manifestations of these diseases and the neurodiagnostic tests utilized to identify specific disorders will then be presented. The goal of this course is to provide the student with the necessary skills and information to be able to neuroanatomically localize lesions, formulate a differential diagnosis for that localization, understand the pathogenesis of these differentials, and interpret diagnostic tests used to rule in or rule out specific neurological disorders. Knowledge of neurological principles provided in this course has direct application to the practice of clinical neurology and neuroscience research.

137098	Louisville Zoological Garden
Subject: VET	Catalog Nbr: 4505
<p>Accompany the zoo veterinarian on rounds and assist in care of active cases. Assist in maintenance of medical records. Clinical Skills II

Subject: Catalog Nbr:
 VET 208

This course is designed to give the student an overview of genetics as it pertains to clinical veterinary medicine. Students are expected to have a background in basic Mendelian Genetics and will use this knowledge in solving genetics situations faced by the large and small animal practitioner. The role of the veterinarian in genetic counseling for owners and breeders of purebred and mixed-breed animals is emphasized. The course covers genetic counseling, genetic disease control, population genetics, breeding systems, critical evaluation of data, pedigree analysis and clinical applications of molecular genetics.

This course meets at Tufts Ambulatory Clinic, Woodstock, CT.

Course Bulletin

137632	VCA All Pets Animal Hospital
Subject: VET	Catalog Nbr: 4572
<p>Type: 10% avian (100 birds/mo) and Housing provided. 5290 Manhattan Cir, Boulder, CO 80303 Telephone: (303) 499-5335 Fax: (303) 499-5362</p>	

137633	Epidemiology and Biostatistics
Subject: VET	Catalog Nbr: 216
<p>The Biostatistics and Epidemiology course will help students to integrate a basic understanding of biostatistics into their clinical and research training, thereby improving the health of animals in their care and the quality of their research. The course focuses on understanding concepts rather than performing calculations. Beginning with patient care in the clinics, the course progresses to the importance of descriptive statistics, then to inferential statistics for clinical research and concludes with inferential statistics applied to animal populations and field research. Biostatistical themes will be emphasized so that students will develop a framework for understanding measures not covered in class. At the end of the course students will be able to read and understand the design and conduct of a majority of articles in the veterinary medical clinical literature, and will be able to design a simple research study.</p>	

137642	Atlantic Street Veterinary Hospital & Pet Emergency Center, Inc.
Subject: VET	Catalog Nbr: 4573
<p>Small animal emergency and critical care and avian/exotic (150 birds/mo). 1100 Atlantic St, Roseville, CA 95678 Telephone: (916) 783-4655 Fax: (916) 783-7916 asvh@mypetdoctor.com</p>	

137646	Cottonwood Vet Clinic
Subject: VET	Catalog Nbr: 4574
<p>20% avian (150 birds/mo) and 20% small exotics Possible housing 7 Shady Ln, Espanola, NM 87532 Telephone: (505) 753-3790</p>	

Course Bulletin

137654	VCA Veterinary Care Center
Subject: VET	Catalog Nbr: 4575
<p>10% avian (40-50 birds/mo) and 5% small exotics. Possible stipend/housing. 9901 Montgomery Blvd NE, Albuquerque, NM 87111 Telephone: (505) 292-5353 Fax: (505) 291-5554</p>	

137660	Avian & Exotic Clinic of the Monterey Peninsula
Subject: VET	Catalog Nbr: 4576
<p>100% avian/exotic practice (including approximately 15% public instructions - Monterey Bay Aquarium) Private practice seen exclusively avian and exotic species. A relatively large native species caseload is also seen. The facility is occupied by a small animal emergency clinic which may be able to provide some exposure for the student. 100% avian/exotic practice dealing primarily with pet animals, however, some avicultural and herputocultural clients are seen. Provides veterinary support for two local wildlife rehabilitation centers. Part time vet care at Monterey Bay Aquarium. Will Provide: Housing 451 Canyon Del Rey Blvd, Del Rey Oaks, CA 93940 (831) 647-1147</p>	

137664	Anatomical Preparations Selective
Subject: VET	Catalog Nbr: 1001
<p>In this selective students will learn a variety of techniques for preparing anatomical specimens for teaching and display purposes. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying of hollow viscera, and corrosion casts of bronchial and vascular systems. Students will also learn about the techniques of plastination. Individual projects are encouraged.</p>	

137665	Law and Veterinary Medicine
Subject: VET	Catalog Nbr: 218
<p>This course seeks to enable students to navigate, and otherwise appreciate the importance of, the legal aspects of the practice of veterinary medicine, including contract law, employment law, legal consequences of ethical choices, legal consequences of medical choices - negligent or otherwise, applicable administrative, civil, and criminal procedural structures and issues, and the applicable regulatory and statutory schemes with which veterinarians - as veterinarians, business owners, or employees - will need to contend. Students will consider both basic and advanced issues of law, and also more specific materials, including actual case studies, in order to challenge the students to inquire always about, and otherwise determine, the legal needs</p>	

Course Bulletin

and ramifications of their chosen profession, and begin to make students aware of the spectrum of practice requirements. Guest speakers are scheduled, who are trained exceptionally in a particular aspect of Veterinary Law.

137667	Durrell Wildlife Conservation Trust
Subject: VET	Catalog Nbr: 4577
<p>Jersey is a unique center for captive breeding of endangered species combined with rehabilitation programs and training of zoologists from developing countries in wildlife management. Exclusively exotic practice located within the grounds of Jersey Zoo. Emphasis is on preventative medicine and a non-invasive approach previously done to the disruptive influence of interference with breeding animals in group structures. Les Augres Manor, La Profonde Rue, Trinity, Jersey JE3 5BP Telephone: 44 (0)1534 860000 Fax: 44 (0)1534 860001 info@durrellwildlife.org</p>	

137675	Northwoods Wildlife Center
Subject: VET	Catalog Nbr: 4578
<p>This is a wildlife treatment & rehabilitation facility. The vets are small animal practitioners. They and their facilities were used for all initial diagnosis and treatments. All follow up rehabilitation was carried out at the center. 8683 Blumenstein Road - Highway 70 West, Minocqua, WI 54548 Telephone: (715) 356-7400 edu@northwoodswildlifecenter.com</p>	

137678	Wildlife in Captivity
Subject: VET	Catalog Nbr: 1002
<p>In readings, discussions, and field trips, students will explore welfare, conservation, health, and policy issues related to keeping wild animals in captivity. Topics will include exotic pets and trade in living wildlife; zoos and aquariums; captive breeding of endangered species; use of captive wildlife in research; animal shelters and sanctuaries; and wild animals in circuses and other forms of entertainment. Students will carry out independent or group projects examining specific problems of interest, and present the results of their investigations as a written report and an oral presentation. The course is co-taught by Dr. Rutberg and Dr. Mark Pokras, with participation from other Tufts faculty.</p>	

137684	New England Aquarium
Subject: VET	Catalog Nbr: 4579

Course Bulletin

25% marine mammals, 25% fish, 25% amphibian, 25% marine birds and reptiles. Exposure to operation of public aquarium and marine mammal rescue program.

Subject: VET	Catalog Nbr: 4609
<p>Emergency Vet Practice. The elective offers hands-on exposure and experience with an emergency practice. The practice works an an overnight and weekend only emergency clinic. Students on the elective will usually work directly with veterinarians that are completing their program towards American College of Veterinary Emergency and Critical Care certification. The rotation would consist of exposure on four nights per week. During a given week, students would start working Monday evening at 7 PM until 8 AM Tuesday morning, and the overnight schedule would be repeated on Friday, Saturday and Sunday night. The experience is in a "real</p>	

Course Bulletin

life" emergency practice and will provide those nto always typically found in the TUSVM emergency and critical care rotation. Duration: Rotation can support 1 student per week.

<p>Tuition based course offered for six weeks during summer months (1 credit). This off-campus selective, held in Florida and Kenya, offers students a chance to study the broad range of issues that affect wildlife and ecosystem health, both terrestrial and aquatic, in industrialized and developing country contexts. This selective provides six weeks of intensive lecture, laboratory and field experience while highlighting the transdisciplinary, cooperative nature of work required for effective wildlife and ecosystem research, management and long-term problem solving. Envirovet faculty are recognized leaders in their fields and opportunities exist for students to explore various career options. Topics include global environmental</p>	

Course Bulletin

threats, ecological health, biodiversity conservation, ecosystem management, emerging disease and the challenges inherent in meeting the needs of stakeholders in varying locations with different political and economic motivations. Throughout the program, students will learn how to employ new tools from information technologies, health sciences, landscape analysis, ecological risk reduction, ecosystem economics and methods for consensus building. These tools should help enable students to identify, prioritize and solve environmental problems and conduct effective environmental action planning, implementation and research.

137948	Cape Wildlife Center
Subject: VET	Catalog Nbr: 4624
<p>Cape Wildlife located on a 5 acre preserve adjoining the Great Salt Marsh in West Barnstable. The Center provides veterinary medical and surgical care to injured, ill and orphaned wildlife. The Center also coordinates with local and staff wildlife rehabilitators to raise orphaned wild animals for release back to the wild. Under the supervision of the veterinarian and staff students will observe and may participate in medical care of native wildlife, as well as learn about and participate in the various tasks involved in properly caring for and raising orphaned young and recovering adult native species. There may also be an opportunity to learn about and observe surgery and holistic health care modalities such as acupuncture, chiropractic and homeopathy. Species presented to the clinic include, but are not limited to, raptors, songbirds, waterfowl, shorebirds, raccoons, squirrels, rabbits, turtles, and snakes. Daily assignments may include assessments and treatments, cleaning and feeding of ongoing cases as well as daily admissions and workups of new cases. There will be supervised participation expected in laboratory workups, radiographic assessments and medical care of cases. Each student will also be learning aspects of husbandry of wildlife in the clinical and rehabilitative settings. The responsibilities that an extern will be involved with will depend on his or her knowledge, experiences, background and goals. A highlight for every student is seeing an animal that came into the clinic ill, debilitated, orphaned or injured released back into its native environment healed and strong. Every effort will be made to ensure that each student has the opportunity to participate in at least one release if the cases so allow. All students are expected to participate in daily cleaning, feeding, diet preparation and laundry tasks. There will be time off scheduled for each student. Housing: There is limited site housing available. The bedrooms are set up dormitory style with 1 to 4 students</p>	

Course Bulletin

per room. There will be a small fee of \$15 per week charged to students staying at the facility to help defray the utility and upkeep costs of the available housing. We ask that students send a check to cover the cost of their accommodations prior to their arrival. Partial weeks may be paid as \$2.50 US per day. This fee may be waived in special circumstances, but must be approved prior to arrival.

4th year only, transcript; resume of training, education and/or experience related to the field of veterinary medicine; resume of training, education and/or experience related to the field of wildlife rehabilitation. Students for whom English is a foreign language must also submit a copy of their TOEFL or equivalent scores. Please list three preferred dates (3 week minimum) and also describe your interest in an externship at the Cape Wildlife Center.

138018	Greening Veterinary Medical Practice
Subject: VET	Catalog Nbr: 1035
<p>This is a continuing research project to identify ways veterinary medicine can reduce it's environmental impact through economical alternatives to traditional practices. Each semester, selective students will pursue investigations that will lead to recommendations for alternatives in veterinary practice. Develop an inventory of all items used in the Tufts Wildlife Clinic. Work with Carolyn Corsiglia and Dr. Kaufman. For each item identify annual costs, number of units used, what the item is used for, who uses the item, fate of the item (general waste, biohazard waste, recycled), environmental impact of each item. Identify alternatives already in use and assess the effectiveness of those items. Rank items in order of greatest to least number items used entering the waste stream. Using sources such as Sustainable Hospitals investigate alternatives for each item including economic impact, labor required, accessibility, overall effect in reducing environmental impact (from source and use to disposal). Develop report including data found, alternatives already in use and recommendations for potential changes in practice. Report will be presented to the Greening the Grafton Campus Committee.</p>

Subject: VET	Catalog Nbr: 4655
<p>The Veterinary Referral & Emergency Center would like to announce its externship (preceptorship) program. We are a 24 hour state-of-the-art referral and emergency center located in southwestern CT. Our 2-year-old, 12,000 square foot hospital is fully equipped for all types of surgical and medical cases. Diagnostic capabilities include a complete in-house lab, blood gas machine, video endoscopy, ultrasound, color flow doppler echocardiography, telemetry, CT Scan, and x-ray. Our specialists cover the fields of dentistry, dermatology, internal medicine, neurology, oncology, ophthalmology, and surgery. Externs can expect "hands on" training in our busy practice. Cage side rounds are conducted twice daily and didactic rounds are offered each week. Rotations through any or all of the specialties (including emergency) are encouraged. Arrangements can be made for any length of time and can be made to accommodate individual requirements.</p> <p>Housing: As a part of our externship program, we can provide housing at no cost to students either on site or one of our general practices.</p> <p>Applicants are taken on a first come first serve basis. We try to limit our program to one student at a time.</p> <p>123 W Cedar St, Norwalk, CT 06854 Telephone: (203) 854-9960 Fax: (203) 838-5956</p>

138125	Lead, Health and the Environment
Subject: VET	Catalog Nbr: 1046
<p>Lead (Pb) is cheap and there is a long tradition of its use in almost all facets of society. But the toxic effects have been recognized for many years. As a result, society has greatly reduced some uses of Pb, including some paints, gasoline and solders because of threats to animals, people and the environment. Despite this, a wide variety of Pb products are currently available and many animals and people suffer from their toxic effects. In this self-directed selective, students will review the current state of knowledge on the toxicity of lead and its behavior in the environment. Each student will undertake a project designed either to compile and analyze information about lead, or to develop educational materials aimed at different stakeholders and/or interest groups. It is anticipated that there will be opportunities for interested students to gain experience in writing for publication and public speaking. Students considering this selective are advised to talk to Dr. Pokras in advance.</p>

<p>Type: North American wildlife, exotic wildlife (intermittent work at Calgary Zoo) The externship at the BNP Wildlife Laboratory will include active participation in the disease surveillance of key species within the park, which may include elk, mule deer, whitetail deer, wolves, cougar, grizzly and black bears. The surveillance program requires extensive cooperation with other wildlife managers in the park and would give the student experience in immobilization/capture techniques of multiple species; handling of large carnivores and herbivores; physical examination and sample collection; necropsy techniques and lesion identification; and parasitology of wildlife species. Opportunities also exist for participation in ongoing wildlife monitoring projects of migrating waterfowl (Harlequin ducks) and for assistance with the clinical assessment and care of a variety of exotic species at the Calgary Zoo. The Calgary Zoo offers a wide variety of experiences for the students, including clinical assessment, treatment and surgery of mammals, amphibian, reptiles and bird (over 900 species in collection). Wildlife Laboratory, Banff National Park, Banff, Alberta Canada Telephone: (403) 762-5339 Fax: (403) 762-3240 todd_shury@pch.gc.ca</p>	

138345	Pets Are Wonderful Support (PAWS)
Subject: VET	Catalog Nbr: 4713

Course Bulletin

The PAWS (Pets Are Wonderful Support) Veterinary Internship Program is a 1 month internship at the PAWS San Francisco office. The objectives of this program are to educate future and current veterinarians about the significance of the human-animal bond, promote public health via education on the health benefits and risks of animal companionship, and provide experience with the operation of a community-based, non-profit organization. In addition to engaging in an educational project at the PAWS office and participating in the Food Bank, students have opportunities to participate in field days with Vet SOS mobile veterinary services to homeless camps in San Francisco and Pets Unlimited, a non-profit animal hospital and community partner of PAWS. In the past, interns have assisted with: * initiating a pilot study on the diversification of PAWS' client base * developing the PAWS Safe Pet Guidelines, which published and presented valuable information on the risks of zoonotic diseases to both the general public and health professionals. *creating the Health Benefits of Companion Animals brochure which documents the top scientific health benefits research. Students in their 3rd and 4th years preferred. One to two internship students are selected yearly based on their letter of interest, background/C.V., and letters of recommendation. Internship possibilities are available in the Spring, Summer and Fall, A stipend of \$1000.00 is provided to cover travel and other miscellaneous expenses. PAWS is not able to guarantee housing.

Stipend: \$1,000.00 for travel and expenses. website: www.pawssf.org

138363	Lilly Research Laboratories
Subject: VET	Catalog Nbr: 4718
<p>Lilly Research Laboratories is proud to announce the availability of an externship in veterinary pathology and laboratory animal medicine. Successful applicants will gain valuable experience in pathology and laboratory animal medicine, and develop a better understanding of the science of drug development. The objectives of this educational opportunity are to provide students with an experiential rotation in Veterinary Pathology and Laboratory Animal Medicine and to develop a broad overview of the many opportunities for employment of veterinarians within the pharmaceutical industry. Externs will work in Greenfield and Indianapolis facilities and will experience the process of pharmaceutical drug development from discovery research to clinical trials. Within the pathology department, externs will participate in investigative pathology, biomarker development, nonGLP studies, and nonclinical drug safety assessment. Externs will be expected to interact with members of the Clinical Pathology, Histology and Necropsy Management teams. In the Laboratory Animal Medicine, externs will work closely with laboratory animal veterinarians and staff as they interact with pathologists and other Lilly scientists in various aspects of the drug development process. Externs will have opportunities to work with veterinarians and other Lilly scientists in Discovery Research, Department of Adsorption-Distribution-Metabolism and Excretion, and ELANCO (Lilly's animal health pharmaceuticals company). A small amount of flexible time will be arranged so that the extern may choose to spend additional</p>	

Course Bulletin

time in an area of interest. The duration of the externship is 3-4 weeks depending on the individual university schedules.

Eli Lilly and company will provide a generous stipend at the completion of the externship period that may be used to supplement the following expenses: housing while in Indianapolis area, travel to and from Indianapolis, meals, and rental car. If necessary, direct billing of some expenses may be arranged for the convenience of the extern.

Application materials are contained on the website [<https://www.scienteur.com>]. To apply, please visit the Scienteur website and register as a "Provider." Print and complete the application form and provide the required materials listed in the application check-list. There is no fee for application. Send the completed application packet to the following address: Externship in Veterinary Pathology and Laboratory Animal Medicine, c/o D.L. Craig, Lilly Research Laboratories, (address continued above). This externship is awarded on a competitive basis. Application packages should include a completed application form, current CV, university transcript, letter of intent that describes related work experiences and future employment intentions, letter of reference from the student's academic advisor, and one personal reference from an individual who is familiar with the applicant. Eli Lilly and Company advises that applications be sent to the address by March 30. Successful applicants will be notified as soon as possible. Successful applicants need to provide written proof of health insurance and results of tuberculosis testing, and will also be required to submit to drug testing and background checks prior to the externship period. The applicant and university will be required to sign confidentiality agreements prior to the externship period.

Subject: VET	Catalog Nbr: 4732
The Gulf States Consortium of Colleges of Veterinary Medicine at Auburn University, Mississippi State University, Louisiana State University, Texas A&M University, and the University of Florida offers a four-week aquatic animal pathobiology course, AQUAMED, annually. The objective of AQUAMED is to impart an understanding of health management techniques and pathological processes relating to the etiology, diagnosis, and treatment of important aquatic animal diseases. Ornamental fish, commercially important fin fish, and shellfish will be emphasized. An overview of reptiles, marine mammals, and aquatic laboratory animals will be presented. Nationally and internationally recognized individuals will present topics relating to culture, maintenance, and health care of aquatic animals. Class size will be limited in order to allow maximum hands-on activities. Weeks 1-3 will be held at the Louisiana State University School of Veterinary Medicine. Week 4 will be conducted at the Louisiana Universities Marine Consortium (LUMCON) facility in Cocodrie, LA. Please see website for further details. Baton Rouge, LA 70803 Telephone: (225) 578-9680

Course Bulletin

138637	Physiology
Subject: VET	Catalog Nbr: 110
<p>This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments, neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included.</p> <p>Required:</p> <p>Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9).</p> <p>Engelking, LR: METABOLIC AND ENDOCRINE PHYSIOLOGY, 3rd ed, 2012, Teton NewMedia, Jackson, WY.</p> <p>Recommended:</p> <p>Engelking, LR: REVIEW OF VETERINARY PHYSIOLOGY, 1st ed, 2002, Teton NewMedia, Jackson, WY (ISBN 1-893441-69-5), or</p> <p>Engelking, LR: HUMAN PHYSIOLOGY PREP, Datachem Software, Inc., Westboro, MA, 2007. (An interactive disc of questions/answers similar to the REVIEW OF VETERINARY PHYSIOLOGY above. This question bank has been placed on computers in the Tufts Veterinary School library.) (The Elsevier/Academic Press text above can be ordered directly from the publisher (http://www.elsevierdirect.com/product.jsp?isbn=9780123848529), and the Teton NewMedia texts can be ordered from sales@tetonnm.com, or 1-877-306-9793). When ordering from Teton NewMedia, students should identify themselves as Tufts veterinary students in order to receive a 15% discount.</p>	

138638	Clinical Skills I
Subject: VET	Catalog Nbr: 105
<p>This course introduces students to the handling and examination of cats, dogs, cattle, horses, llamas, goats and sheep. Emphasis is put on aspects of behavior important to the restraint, handling and examination methods. Students will also learn basic examination methods, common breeds and pertinent lay terminology relating to husbandry.</p>	

Course Bulletin

138639	Problem Based Learning II
Subject: VET	Catalog Nbr: 130
<p>The principle objective of this course is to promote self-directed learning using clinical cases to enhance the students understanding of biochemical, physiological, and pathophysiological mechanisms and principles taught in lectures. The small group sessions are also intended to help students develop communication skills, cooperative behaviors, data base searching skills, and the ability to provide and receive constructive criticism concerning their critical thinking and interactive skills.</p>	

138640	Adopt A Veterinary Student
Subject: VET	Catalog Nbr: 132
<p>The objective of this program is to introduce students to the animal handling, husbandry practices and management approaches of various animal operations. The intent is to increase the skills and awareness of students with respect to the animal species with which they will be increasingly involved during the course of their veterinary education. The students are required to complete 2 days at an assigned farm or barn before the determined deadline.</p> <p>This course meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

138642	Clinical Skills II
Subject: VET	Catalog Nbr: 208
<p>This course is designed to give the student an overview of genetics as it pertains to clinical veterinary medicine. Students are expected to have a background in basic Mendelian Genetics and will use this knowledge in solving genetics situations faced by the large and small animal practitioner. The role of the veterinarian in genetic counseling for owners and breeders of purebred and mixed-breed animals is emphasized. The course covers genetic counseling, genetic disease control, population genetics, breeding systems, critical evaluation of data, pedigree analysis and clinical applications of molecular genetics.</p> <p>This course meets at Tufts Ambulatory Clinic, Woodstock, CT.</p>	

138643	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
<p>The objective of this course is to give students an introduction to how the small and large animal hospitals, Grafton campus farm and ambulatory service in Woodstock, CT operate. The experience is primarily observational. The student will "shadow" a fourth year student to obtain an insight into the process of medical diagnosis and treatment of diseases. Throughout the year, students will spend a total of one full day in the large animal hospital, one full day in the small animal hospital, one night in the emergency room, one full day on the ambulatory service and one half day (spring semester) at the farm. In addition, students will be</p>	

Course Bulletin

assigned to spend either ½ day in anesthesia, or ½ day in wildlife. The goal will be for students to complete a physical examination of a clinical patient during each rotation. In addition, students will be paired with a fourth year student to participate in 2 treatment shifts in the wards over the course of the year. The purpose of treatment shifts is for students to become acquainted with treatment sheets, medical orders, and animal restraint. No textbook is needed for this course. A single short introductory session for the entire class is held before the rotations start. A handout with the required information is available in TUSK.

138644	Transfer Credit
Subject: TRAN	Catalog Nbr: 9999

138645	Radioanatomy and Working Principles of Medical Imaging
Subject: VET	Catalog Nbr: 113
<p>This course provides the fundamentals of different imaging modalities (radiography, CT, MRI, and ultrasound), and their application towards normal anatomy of dogs, cats, and horses. The first half of this course is devoted to image formation, radiation safety, image interpretation principles, imaging artifacts, and indications of the different imaging modalities. The second half of the course covers the normal anatomy of clinically relevant structures using different imaging modalities. The course serves as a foundation for the radiology and ultrasound courses during the second and third years of the curriculum.</p>	

138646	Veterinary Histology
Subject: VET	Catalog Nbr: 136
<p>The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.</p>	

138668	Emerging and Exotic Diseases
Subject: VET	Catalog Nbr: 241
<p>The Emerging and Exotic Diseases of Animals (EEDA) & Initial Accreditation Training (IAT) course is an on-line</p>	

Course Bulletin

self-paced course. This course is designed to provide students with a fundamental understanding of 1) How to recognize the majority of EEDA; 2) The role of the veterinary profession in preventing, detecting, and responding to incursions of EEDA; 3) The role of the OIE, USDA, federal and state governments in responding to EEDA; and 4) The impact EEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation.

138671	Introduction to Small Animal Anesthesia and Surgery Techniques			
Subject:	Catalog Nbr:			
VET	323			
This course provides an introduction to basic surgical and anesthetic techniques. During the year, each student performs an ovariohysterectomy in two dogs and anesthetizes two additional dogs for ovariohysterectomy. Students are also responsible for pre- and postoperative care of the dogs.				

138872	SASx Soft Tissue			
Subject:	Catalog Nbr:

VET	429			

138875	Clinical Reasoning			
Subject:	Catalog Nbr:			
VET	342			
	2016 FALL	Primary	Nicholas Frank	Nicholas.Frank@tufts.edu
The course is intended to promote self-directed learning. Clinical cases are provided to develop and demonstrate the interrelations between pathophysiology, nutrition, pharmacology, public health, ethics, client and professional relations in the clinical setting. The small group sessions are intended to foster the development of collegial and cooperative learning, effective communication, the ability to give and receive feedback and clinical judgment. The facilitator encourages critical thinking, model appropriate methods of investigation and use of data and the skills necessary for effective functioning in clinical settings.

139190	Haines Road Animal Hospital-Small Animal
Subject: VET	Catalog Nbr: 5108
<p>Haines Road Animal Hospital was established in 1960 as a two veterinarian clinic operated by it's founder, Dr. Joe Larmon. In 1997, Dr. Javier Vicente bought the clinic after practicing here for five years. As a young veterinarian, Dr. Vicente had a deep love for animals and a vision of a veterinary hospital that treats pets with the same level of medical care and attention given to human patients. It was his insight and dedication to veterinary medicine that has brought Haines Road Animal Hospital where it is today- a five veterinarian, full- service facility offering the most progressive and up to date treatment for pets throughout St. Petersburg and surrounding communities.</p> <p>4342 Haines Rd N St Petersburg, FL 33714 (727) 525-2118</p>

Subject: VET	Catalog Nbr: 5220
<p>Rutland Veterinary Clinic is a full service veterinary clinic that has been serving the beautiful town of Rutland and surrounding communities since 1995. We are located near the center of town at 203 Main St. (122-A), in one of the lovely old homes of Rutland. We may look small but we care for a large number of dogs, cats, ferrets, rabbits, pocket pets, and the occasional chicken, duck and small ruminant brought in by the varied human population of the area. Our reputation is built on honesty and compassion and a belief that the animals that give us so much love deserve the best in medical care.</p> <p>Rutland Vet Clinic is a fully equipped hospital with digital X-ray, in house laboratory capabilities, and fully monitored gas anesthesia. We offer a wide variety of dental and surgical procedures as well as many years of experience in medical diagnostics and treatment. We are committed to looking at the whole picture and working with owners to come up with the best treatment regime for their pets. Our hope is that with regular check ups and good preventative medicine potential problems can be found early and avoided.</p> <p>RVC 203 Main St., Rutland, Ma 01543 508-886-2286</p>	

139559	New England Wildlife Center/Odd Pet Vet
Subject: VET	Catalog Nbr: 5221
<p>The Odd Pet Vet is the only exclusively exotic veterinary practice in Eastern Massachusetts. It is the Center's most significant fee-for-service program. It is a goal of the Center to raise 40% of its income from commercial enterprises like the fee-for-service Odd Pet Vet.</p> <p>We treat about a hundred species of animals from chickens, turtles, snakes, lizards, rabbits, guinea pigs, hamsters, gerbils, mice, rats, degus, parrots, pigeons, and a host of invertebrates like scorpions, tarantulas, hermit crabs, and cockroaches. All proceeds from the Odd Pet Vet go directly to support educational programming and animal care at the Center. Volunteers and interns often start their learning careers at the Center helping Dr. Mertz with veterinary exams. The Odd Pet Vet has been featured in Discover Magazine, The Boston Globe Magazine, and the Today Show, and was designated the "Best of Boston 2004" for exotic animal care by Boston Magazine.</p> <p>500 Columbian Street South Weymouth, MA 02190 781-682-4878 781-682-4872 (fax)</p>

The Beltsville Agricultural Research Center provides an opportunity for University and College students to learn and gain experience in veterinary medicine through the Veterinary Services' Summer Internship Program. Veterinary students and graduates are also offered an opportunity to complete an externship in Food Animal Medicine. These programs provide experience and training in an agricultural environment dedicated to animal research. Program objectives include discussions on understanding contemporary clinical problem solving, and reviewing problem oriented medical records, with subjective and objective data analysis. There will be hands-on practice in history taking, animal inspection and examination. Hands-on practice in sampling, analyzing and use of clinical pathology data, as well as developing of herd health programs including use of integrated management systems will also be offered. The internship program will include clinical rounds activities and discussion of veterinary emerging diseases as well. If you or someone you know is interested in participating in the program, please contact Gregory Sample at the ANRI Veterinary Services Unit.

<p>The Veterinary Medical Externship is designed for veterinary students, preferably during their senior level or fourth year at an accredited veterinary college. Four students are selected each year to participate in the 4-6 week externship; only one student is on-site at a time. During this time, they are given the opportunity to observe and participate in various clinical activities under the direction of the veterinary staff. In addition, they are expected to select and complete a clinical project in marine mammal medicine during their stay. The internships are voluntary, and students are responsible for their own transportation and housing arrangements. Students must be U.S. citizens in U.S.-accredited schools within the United States.</p> <p>Students interested in the Animal Care and Training internship are encouraged to send a resume, letter of intent including career goals and reasons for wanting the internship, an unofficial or official copy of their transcripts, proof of medical insurance, proof of U.S. citizenship, and a minimum of three letters of recommendation from professors or employers to the address below.</p> <p>Students interested in the Veterinary Medical Externship should also send a letter to the address below. This letter should include reasons for wanting to participate in the program and dates of availability. It is recommended that applicants list at least three prioritized availability dates. In addition, students must submit a curriculum vitae, two letters of reference, and proof of U.S. citizenship.</p> <p>Attn: Coordinator of Volunteer Opportunities Space and Naval Warfare Systems Center Pacific, Code 71510 53560 Hull Street San Diego, CA 92152</p> <p>Or fax it to (619) 553-2678.</p> <p>For further information about any of the Navy Marine Mammal Programs internships, please send an email to nmmp_intern@spawar.navy.mil.</p>

139711	Tambopata Macaw Project	
---------------	--------------------------------	--

Course Bulletin

Subject: Catalog Nbr:
VET 5231

The Tambopata Macaw Project is a long term research project on the ecology and conservation of macaws and parrots in the lowlands of southeastern Peru under the direction of Dr. Donald Brightsmith of the Schubot Exotic Bird Health Center at Texas A&M University.

The Tambopata Macaw Project has been working with wildlife and local communities since 1989. A long history of dedicated research and monitoring has provided many insights into various aspects of parrot and wildlife of south eastern Peru. We are always looking to collaborate with anyone with a passion for conservation and biology. We have supported many national and international students and look forward to hearing from you should you wish to participate in our project or conduct your studies with our support.

Tambopata is a unique forest environment, with the highest concentrations of avian clay licks in the world. A range of animals come to satisfy their need for salt along the river banks of the region. The experience of hundreds of macaws at a claylick is one of the world's ornithological highlights. The Tambopata faces imminent threat from the paving of a highway through one of the planet's most biodiverse regions. We need all the help and assistance we can get to try and understand what the impacts may be for one of the forests major icons.

This site has been designed to explain research being undertaken, to provide public access to reports and publications about our macaw research and for anyone who is interested in the project and is thinking of taking part.

<p>Rose Hill Veterinary Practice was founded in 1998 with the goal of providing full-service care to all animals in a previously underserved portion of the Virginia Piedmont. With headquarters in Rappahannock County, the practice has grown to include two full-service facilities. The Large Animal Practice started in 1998 as a solo ambulatory practice and now has three veterinarians providing full-service, farm-to-farm care. In 2006, we opened a treatment facility for our Large Animal practice that allows a greater depth of care and houses some of the most advanced equipment and services available.</p> <p>In 2003, we opened our full-service Small Animal Clinic where our clients also enjoy a dedicated staff that provides the most in-depth care with the most advanced equipment in the region. Our two veterinarians provide high quality medicine and surgery in a quiet, relaxed environment where both the patient and the owner can enjoy their visit. Our support staff is among the most experienced, talented and compassionate within our profession.</p> <p>Whether you have a large farm operation that needs a veterinarian or you have a tiny kitten that needs care, Rose Hill Veterinary Practice, P.C. has the tools and the trained staff to assure a positive experience for all. We are all dedicated to providing quality client service in a friendly and professional manner.</p> <p>Rose Hill Veterinary Practice PC Large Animal Clinic 21A Christmas Tree Lane P.O. 139927	Peninsula Humane Society & SPCA
Subject: VET	Catalog Nbr: 5295
<p>PHS/SPCA is a private, independent, non-profit, and much more than a no-kill shelter. We've rehomed 100% of the healthy dogs and cats in our care since 2003 and promise to do this going forward. While rewarding, this isn't our most challenging work and doesn't define us. We accept our community's sick, injured, abused, unwanted, stray, neglected and older animals; donations to our Hope Program enable us to help and rehome approximately 200 every month. (Sadly, private shelters in many communities never give them a chance). We rehabilitate wildlife, make spay/neuter free for our low or fixed-income residents, educate children, and investigate animal cruelty. PHS/SPCA is one of the few shelters in the entire state accredited by the American Animal Hospital association and we're a gold-level GuideStar Exchange participant (click the seal below to access our GuideStar nonprofit report). Most important, we've earned our community's trust, involvement and support. We take our work and mission seriously, but also have fun. It's why we've adopted "Sit Happens!" as our Behavior & Training Dept slogan and have "Go Nuts" emblazon across the back our of mobile spay/neuter clinic. Most important, we've earned our community's trust, involvement and support.</p> <p>12 Airport Boulevard, San Mateo, CA 94401 Phone 650.340.7022 Fax 650.348.7891</p>

They also will schedule appointments, facilitate prescription refills and help you choose the best products for your pet care needs.</p>	

Course Bulletin

Exam Rooms

The Clinic has comfortable examination rooms where you and your pet will meet with a Doctor for examinations, vaccinations, and to discuss any concerns you might have about your pet's health, diet or behavior.

Treatment Rooms

Part of the Clinic that most people don't see, the treatment rooms are used for procedures that are more sophisticated than can be done in the Exam Rooms, but don't require all the technology of the Operating Room.

Operating Room

Surgeries take place in an operating suite which is set up much like a human operating room, with state of the art equipment for administering anesthesia and monitoring patients' vital functions.

Dentistry

Dental care is important to your pet's overall health. We have specialized equipment for dental work, such as a digital dental x-ray unit that provides us with instant views of your pets teeth, a superior monitoring system during anesthesia and constant attention to your pet's comfort during and after the procedure.

Pharmacy

The Doctors are supported in their work by a full pharmacy. Additionally, we work with compounding pharmacies to prepare medications that are easiest to medicate your pet with.

Laboratory

An on-site lab allows processing of tests.

Imaging

We now have a state-of-the art digital x-ray unit. All of our radiographs are uploaded and reviewed by board certified radiologists. Digital radiology gives us the specialist's interpretation within hours instead of days, allowing for a fast response in your pets' care. We have a human grade ultrasound machine that greatly facilitates the level of care we can deliver in both routine and emergency situations. Fremont has 2 certified ultrasound technicians.

Course Bulletin

rather than temporary relief of symptoms. We try to achieve this goal by maximizing the use of healthy foods, nutritional supplements, and natural medicines, while minimizing the use of conventional pharmaceuticals.

Protocols to achieve our goals center on:

Nutrition

whole fresh foods

truly premium pet foods

nutritional supplementation (vitamins, minerals, etc.)

Minimized use of "toxic" medicines

vaccines

heartworm preventatives

flea and tick control products

conventional pharmaceuticals

Increased use of natural/alternative therapies

acupuncture

chiropractic care

herbal remedies

homeopathic remedies

We believe that client education is of paramount importance to helping pets achieve better health. The more knowledgeable clients are about their pets' health (or lack thereof), the more able they are to make informed decisions/choices. This enables us to do our job better. We consider the "healthcare team" to be the staff at our practice, the pet's owner(s), and the pet.

<p>City Cats is an upscale full-service cat-only veterinary clinic, offering checkups, dental and surgical procedures, boarding and a full line of cat food and retail products.</p> <p>We are dedicated to keeping your cat healthy and happy, so you can enjoy his or her company into their golden years. Since we only treat cats, we can concentrate totally on the treatment of and problems specific to cats. We believe cats need a place of their own where they can receive high-quality, uncompromising medical care.</p> <ul style="list-style-type: none"> • Stress-free: cats aren't subjected to barking dogs or other threatening animals • State-of-the-art: cats are assured the latest diagnostic equipment for detecting problems without undue stress • Comfortable: cats feel safe and at home <p>665 Massachusetts Ave, Arlington, MA 02476 (781) 641-3673</p>	

140073	University of Guelph-Animal Welfare
Subject: VET	Catalog Nbr: 1286

140074	TCSVM SASx Tech Team
Subject: VET	Catalog Nbr: 1287

140075	Enrichment Week-Small Animal Diagnostic Imaging
Subject: VET	Catalog Nbr: 3001
<p>Students will gain experience in interpreting small animal radiographs and alternate imaging studies through initial self study of clinical cases followed by a group discussion with radiologists.</p>	

140076	Enrichment Week-Does Your Patient Think You Are A Predator?
Subject: VET	Catalog Nbr: 3002
<p>This program is designed to prepare non-equine oriented students for HLA clinical rotations. The focus is on effective methods of interacting with equine patients and their owners. Students will have hands-on practice in approaching and communicating with equines and their handlers.</p>	

Course Bulletin

Course Objectives:

- Become aware of how (your) energy and body language effects horse behavior
- Understand what the horse is communicating (to you) and how best to respond to create confidence and trust with the horse and handler
- Gain effective client communication skills
- Learn how to think like a horse (right brain vs left brain) to better understand your patient
- Improve attention, mindfulness and focus while taking an equine patient case history

140077	Enrichment Week-Small Animal Anesthesia Dry Lab
Subject: VET	Catalog Nbr: 3003
<p>Do you feel prepared to come up with sedation and anesthesia protocols for your patients on clinics? Did you find anesthesia during ISAST to be relaxing and uneventful? If you answered no to either of those questions than this elective is for you. The focus of the elective will be to help the student become prepared to come up with sedation and anesthesia protocols when they hit the clinic. We will cover the basic process for working up a case on the small animal anesthesia service but will also go over how to work up a case when you are on another service such as small animal surgery, ER or medicine. In addition, we will discuss “real world” protocols that you will be using on the Tufts at Tech rotation. This four hour session is designed to be a bridge from the class room to the clinic.</p> <p>In addition to reviewing the paper work and protocols used on rotation, we will also provide an opportunity to practice clinical skills including IV catheter placement and endotracheal intubation using models. We will create clinical scenarios or drills for you to run through so that you can practice how you will prepare, anesthetize and monitor an actual patient under anesthesia. We will also have anesthesia monitors and equipment available for you to practice with and ask questions about.</p> <p>Specific skills that will be covered include:</p> <ul style="list-style-type: none"> Designing a sedation and anesthesia protocols for a sick and a healthy patients Calculating CRIs and understanding fluid therapy under anesthesia Set up and pressure check an anesthesia machine, select proper circuit, use a bair Fill out and use an anesthesia record Steps for placing an IV catheter and for intubation Trouble shooting a problem case and responding to anesthetic emergencies 	

140078	Enrichment Week-Feeding Tubes & Guidelines: SA Clinical Nutrition
Subject: VET	Catalog Nbr: 3004
<p>Students will participate in two sections of the lab: practical and clinical use of feeding tubes. The first section will spend two hours being shown how to and practicing e-tube placement in dogs and cats. A video and handout will be sent to the students prior to the elective that they should review. The second section will be spent working through clinical cases that require feeding tubes. Students will be mentored on how to: 1) select appropriate diets based on patient requirements, 2) write feeding orders for their patient while hospitalized, and 3) produce a written consultation with discharge orders for their patient once ready to go home.</p>	

Course Bulletin

140079	Enrichment Week-SA Nephrology/Urology
Subject: VET	Catalog Nbr: 3005
<p>There will be a lecture and discussion session each day describing indications and more specific "how to" for clinical techniques in nephrology (peritoneal dialysis, intermittent hemodialysis, continuous renal replacement therapy, laser lithotripsy, urodynamics, cystoscopy). There will be hands-on labs in dialysis, urodynamics, and possibly cystoscopy and laser lithotripsy. Clinical cases will be discussed, and additional techniques will be demonstrated or performed, depending on caseload.</p>	

140080	Enrichment Week-Germplasm Cryopreservation
Subject: VET	Catalog Nbr: 3006
<p>Designed for students with an interest in advanced reproductive technologies who would like to gain experience in the areas of embryo and semen collection and cryopreservation. The course will be held at the SVF Foundation located in Newport, RI. The mission of the SVF Foundation is to preserve germplasm of rare and endangered breeds of livestock that are threatened by extinction by creating and maintaining a genetic bank consisting of frozen embryos, semen, fibroblasts and serum. Course topics/procedures will include superovulation and non-surgical embryo collection from cattle, superovulation and surgical embryo collection from sheep and goats, semen collection via artificial vagina from sheep and goats, embryo and semen cryopreservation, evaluation of sperm morphology and post-thaw sperm viability, embryo handling and morphologic evaluation, principles of cryopreservation (slow equilibrium freezing vs. vitrification) and long term storage in liquid nitrogen. The course is largely hands-on and students will participate in the actual collection, processing, assessment, and freezing of embryos and semen. For further information about the SVF Foundation, visit www.svffoundation.org.</p>	

140081	Enrichment Week-Dental Extractions and Radiography
Subject: VET	Catalog Nbr: 3007
<p>Hands-on introduction to dental radiography (taking, developing, evaluating) and tooth extraction (including single and multi-rooted teeth, involving use of a high-speed dental drill and flap techniques).</p>	

140082	Enrichment Week-Camelid Commons Procedural Skills
Subject: VET	Catalog Nbr: 3008
<p>This is a one day elective that will allow students to perform any and all of the procedures listed: Fecal exams and identify common parasites, IV jugular catheter placement, abdominocentesis, spinal fluid collection, blood collection, castration, anything else time will permit.</p>	

Course Bulletin

140083	Enrichment Week-Shelter Dog Dental Day
Subject: VET	Catalog Nbr: 3009
<p>Students will work in teams to anesthetize and perform dental prophylaxis on a healthy shelter dog who is in need of dental care before adoption. Each student will get to do the dental work on one half of a dog's mouth. Cleaning procedures will be performed by the student under the supervision of Dr. Joo and Dr. Rosenblad. Extractions will be performed by the veterinary dentists and observed by students, however the students are encouraged to enroll in the cadaver lab to be held on Friday when the students will practice extractions. While one student is cleaning teeth, the other team member will be responsible for the dog's anesthesia under the supervision of Dr. McCobb (team will swap roles half way through the procedure). Anesthetic protocols, risks and pain management for dental procedures will be discussed. Students will be required to be in the spay lab by 7 am to perform "SOAPs" and ready the patients for anesthesia.</p>	

140084	Enrichment Week-Tufts VETS/ECC
Subject: VET	Catalog Nbr: 3010
<p>Tufts Veterinary Emergency Treatment & Specialties - E/CC rotation. During these 2-3 day rotations you will shadow our doctors receiving common emergencies, participate in cage-side rounds, and be exposed to inpatient care of critical animals. Spend time with our ECC staff (criticalists, residents, interns, emergency veterinarians) and start to build the skills needed to succeed in a busy emergency and critical care hospital.</p>	

140085	Enrichment Week-Cytology of Cutaneous Lesions
Subject: VET	Catalog Nbr: 3011
<p>Participants will have a chance to practice performing fine needle aspirates, and make squash preparations and impression smears. As a group we will review the cytologic appearance of common dermatologic abnormalities and cutaneous lesions, including both inflammatory and neoplastic lesions.</p>	

140086	Enrichment Week-Equine Practical
Subject: VET	Catalog Nbr: 3012
<p>discussions in the morning followed by wetlab time in the afternoon to practice procedures, improve technical skills, and obtain hands-on experience with horses. Topics include: physical exam, physical and chemical restraint, field emergencies, field anesthesia and castration, oral examination and dental care, basic foot care and lameness examination and advanced bandage application, and breeding and soundness examination and female reproductive evaluation. There will be one day spent with a farrier learning how to evaluate and handle horses feet, including shoe removal, trimming, foot anatomy and evaluation and placement of shoes. Basic procedures that students will perform include: review of physical exam (filling out health certificates and EIA forms), blood collection, administration of injections and oral medications, practical ocular examination, nasogastric intubation, lameness exam, bandage applications, rectal palpation and ultrasonography, vaginal exams and urinary catheterization. Also a prepurchase examination of a horse will be performed and students</p>	

Course Bulletin

will have the ability to practice radiographic techniques to obtain adequate radiographs in the field. One full day will involve a visit to the University of Connecticut to perform endoscopy on horses and perform dentistry examinations and routine dental care.

140087	Enrichment Week-Lab Test Result Interpretation
Subject: VET	Catalog Nbr: 3013
<p>This elective offers a low stress, chance to practice interpreting lab data, right before going into clinics. Participants will be given some case material (emphasis on chemistry data, but other data such as CBCs, cytology results may be included) to look over ahead of time and then the group will discuss possible differential diagnoses for the identified abnormalities, underlying mechanisms and further workup that might assist in reaching a final diagnosis.</p>	

140088	Enrichment Week-Camelid Medicine & Reproduction
Subject: VET	Catalog Nbr: 3014
<p>This one day elective covers a variety of aspects of llama and alpaca medicine, including reproductive examination (ultrasound/vaginal examination wetlab)</p> <p>Topics covered:</p> <ul style="list-style-type: none"> -Sedation and field anesthesia -Common neurological diseases and diagnostics (e.g. spinal tap) -How to interpret "respiratory disease" in camelids -How to interpret "colic" and "GI disease" in camelids -How to interpret "metabolic diseases" in camelids -The critically ill cria -Reproductive examination (male / female) [wet lab] 	

140089	Enrichment Week-Intro of Physical Therapy & Rehabilitation
Subject: VET	Catalog Nbr: 3015
<p>A series of lectures on introduction to principles of physical therapy and rehabilitation, indications and benefits for these modalities, how to prescribe this for your patients, video demonstration of some basic techniques, and how to pursue additional training and certification in PTR. We will hopefully be able to demonstrate some techniques on some of our own dogs.</p>	

140090	Enrichment Week-SA Clinical Nutrition Bootcamp
Subject: VET	Catalog Nbr: 3016
<p>This short course is designed to prepare students for the basic essentials in providing nutritional guidance and management for your small animal patients in practice. Topics will include reading pet food labels and doing</p>	

Course Bulletin

calculations, the Top Ten Nutrition Mistakes we see frequently, learn in an interactive setting how a nutritionist approaches a case, and finally, the last hour will be student's choice, decided by those students signed up by survey in advance. (Popular sessions in the past have been FAQ, case studies, work through your own pet's management, home cooked diets, and more.)

140091	Enrichment Week-Integrative Management of Chronic Pain/Small Animal
Subject: VET	Catalog Nbr: 3017
<p>Management of chronic pain in dogs and cats is a challenge that every general practitioner faces. While medications are essential, there are a number of ways that pain can be managed using non pharmacologic therapies such as acupuncture, trigger point therapy, exercise, low level laser, chiropractic adjustment, etc., adding nutrition and other lifestyle changes. If you are keen to learn some of the basics about how these modalities may work, how to pursue advanced training, and how you can integrate them into your practice, then this should be a day well spent. Case examples and video demonstrations will be used to illustrate the various strategies.</p>	

140092	Enrichment Week-Client Interactions & Customer Service
Subject: VET	Catalog Nbr: 3018
<p>This elective will focus on common things that create customer dissatisfaction in the hospital and what can be done to avoid these. It will also provide tips on how to address issues that arise. There will be case scenarios provided for the students to work on and each case will then be reviewed as a group. These cases scenarios will be based on actual problems we have faced in the past. There will be some role playing for the braver students depending on the case being discussed.</p>	

140093	LASx Bovine Omentopexy Lab
Subject: VET	Catalog Nbr: 3019
<p>In the lab you will work as a team of two to three students to perform the anesthetic blocks, the surgical scrub, and an omentopexy procedure. You will also be required to provide the post-operative care for the heifer. This includes checking on the animal am and pm immediately following surgery (2 days), then once daily (SOAP) until the time of suture removal at 2 weeks. This includes weekends and holidays. You are also required to perform all of the treatments (which may be more than once daily) that your cow may require if she becomes sick. Patient SOAPS must be completed between 7:40 am & 8 a.m. on non-holiday weekdays and between 8:40 am - 9 a.m. on weekend days and holidays. Failure to take care of the animal properly and humanely will result in failure of the course.</p>

Course Bulletin

- To exchange information and preserve the rural traditions of herding for future generations in Nunoa.
- To establish self sustaining programs in the areas of: support for herding families and veterinary assistance for livestock in the Nunoa area.
- To provide educational and research opportunities along with training for students, farmers and veterinarians through the North American Camelid Studies Program in the US and through the Nunoa Project work in Peru.

140110	Animal Protective League
Subject: VET	Catalog Nbr: 5362
<p>The Animal Protective League's Spay/Neuter Clinic addresses companion animal overpopulation in Sangamon County and surrounding communities. This unique high-quality, high-volume, low-cost spay/neuter program performs 52 or more spay/neuter surgeries daily. As a regional facility, we partner with animal control agencies, shelters and rescue groups within a 90-mile radius. Our goal is to defeat the tragedy of companion animal overpopulation by targeting the most prolific populations ... ferals, strays, and other unaltered animals whose owners often cannot afford the cost of spaying or neutering their companion animals or don't have any idea why they should. Since opening in 2006, the APL Spay/Neuter Clinic has performed over 56,000 surgeries. As a direct result, we have seen the euthanasia rate in Sangamon County decrease 12.5%!</p> <p>1001 Taintor Rd, Springfield, IL 62702 (217) 544-7387</p>

About

Welcome to the Grayling Hospital for Animals. Located in Grayling, Michigan, we have been proudly and compassionately serving our clients since 1973. Our mission is to create a friendly, educational atmosphere for clients and employees, which enables us to provide quality, progressive health care for all of our patients.

Each member of our staff is qualified and well-trained. From surgeons to technicians, each offers the skills required to make your pet comfortable in a time when they may otherwise be nervous and in pain. This comfort level extends beyond your pet to you and your experience as well. You can always expect to see a friendly and familiar face when you arrive. We work hard to keep your pet healthy offering years of experience and the latest in veterinary technology, as well as the personal care that make us unique from other clinics. The entire staff at Grayling Hospital for Animals is dedicated to preserving and strengthening the trust you place in us by providing outstanding and compassionate veterinary care for your pet.

We are a full service veterinary facility, accredited by the American Animal Hospital Association (AAHA). You and your family will appreciate knowing that all aspects of your pets needs are met and exceeded, in keeping with the high standards of the AAHA. Accredited practices must meet specific standards in the following areas:

- Anesthesia
- Client Services
- Contagious Disease
- Continuing Education
- Dentistry
- Diagnostic Imaging
- Emergency/Urgent Care
- Examination Room
- Housekeeping
- Human Resources
- Laboratory
- Medical Records
- Pain Management

We offer the “intelligent integration” of conventional and complementary veterinary medicine...

For over two decades, Smith Ridge Veterinary Center has provided a combination of conventional and complementary veterinary medicine for both healthy and ill animals. Our experience in the “intelligent integration” of the most effective therapies from both worlds offers a unique resource to clients seeking the best possible care for their animal.

The practice was founded in 1984 by internationally famous veterinarian Dr. Martin Goldstein, or Dr. Marty as he is more often called, who pioneered many of the methods used in the care of animals brought to Smith Ridge.

Early in the development of the practice, Dr. Marty recognized that the world of veterinary medicine was dividing into an “either/or” choice for clients.

Pet owners were forced to choose either a conventional approach or one based on alternative therapies. But Dr. Marty realized that a combined approach would offer the strongest path to maintaining good health and promoting healing in animals who were ill. The integrated knowledge and protocols he developed are now used by all of the Smith Ridge veterinarians and support staff for the animals entrusted to our care.

140159	Camp Pendleton Veterinary Treatment Facility
Subject: VET	Catalog Nbr: 5372
<p>The mission of the Camp Pendleton Veterinary Treatment Facility (VTF) is to not only provide complete medical and surgical care for the military working dogs (MWDs), but to also provide high quality veterinary care at a reasonable cost for the pets of our military community. Because our primary attention must be devoted to maintaining the deployability and health of our canine warriors, the MWDs, we are unable to function as a full-service veterinary hospital. In light of our demanding mission with the MWDs, we focus our privately-owned animal (POA) mission on preventive medicine. We offer appointments for vaccinations, microchip implantation, health certificates for travel, wellness exams, and limited sick call. We encourage our clients to call our appointment line for availability of sick call appointments, but also realize that it often may be in the pet's best interest to be seen off-base in emergencies, non-elective surgeries, or cases requiring hospitalization or advanced diagnostics.</p> <p>Surgery</p> <p>The demanding Camp Pendleton MWD mission does not always allow us to accommodate routine surgical</p>	

Course Bulletin

procedures for our privately owned animals. Currently, we are able to offer limited spay/neuter appointments and other special surgical procedures. Please call the clinic for our current surgical capabilities. These limited surgical opportunities are not based on a client's rank or position, and their availability is dependent on the Army staff's other ongoing missions.

888 High Ridge Rd, Stamford, CT 06905

(203) 329-8811

We are an owner-operated veterinary hospital providing compassionate high-quality care for animals since 1955.

- We perform a high standard of veterinary care at less than competitive prices.
- Our goal is to make it affordable for all people to have specialized veterinary care.
- We have the capability to perform in-house blood work, ultrasounds, endoscopes, radiographs, dental radiographs, and other diagnostic tests to help better treat your animal.

We are one of only a few hospitals in the country to have an elite, fully computer integrated animal diagnostic care system.

- We have a full surgical suite where we perform both elective and life-saving surgeries, from spays to fracture repairs to heart surgery.
- We also have a separate dental/special procedure room where both simple dental cleanings and complex dental procedures are performed.
- We offer emergency care during all business hours and have a complete ICU facility with heat regulated oxygen cages and video monitoring.
- We are the only area clinic that offers a AVCA board certified animal chiropractor. This allows us to offer an alternative treatment to our patients.

Course Bulletin

Address: 100 James Road,
Jekyll Island, GA 31527
Tel: 1 (877) 4-JEKYLL

The Georgia Sea Turtle Center was created and is operated by the Jekyll Island Authority as a primary conservation program dedicated to increasing awareness through sea turtle education, rehabilitation, and research programs. The Georgia Sea Turtle Center empowers individuals to act locally, regionally, and globally to protect the environment.

The GSTC was opened in 2007 with an unyielding philosophy, one committed to increasing awareness of habitat and wildlife conservation challenges, promoting responsibility for ecosystem health, and empowering individuals to act locally, regionally, and globally to protect the environment. Though the organization is a relatively new one, the GSTC has already charted fresh territory with its singular charge of managing coastal habitats for native and endangered wildlife through field biology efforts and increasing public awareness of environmental degradation and healthy wildlife interactions. As urbanization continues to alter natural habitats, it becomes increasingly essential to strike a balance between human presence and environmental integrity while maintaining effective wildlife conflict resolution techniques.

The Georgia Sea Turtle Center is an advanced hospital but open to the general public, offering an interactive Exhibit Gallery and Rehabilitation Pavilion with a many sea turtle patients regularly on view for guests. Additionally, indoor and outdoor educational programs are available year-round for guests of all ages.

Course Bulletin

compassionate, high quality medicine to small animal patients at all life stages. Our patients include dogs, cats, pocket pets, guinea pigs, rabbits, ferrets and some reptiles.

SVH is involved with our community. Each year we participate in the Southborough rabies clinic providing low cost rabies vaccines to cats and dogs in the community. SVH also works with several of the humane societies and rescue groups in the area, providing quality veterinary care at low cost. Our doctors make appearances in the local school system to provide educational enrichment to children of all ages. We also host charitable events such as the annual Toys for Tots collection during the holiday season.

Dr. Ogden and Dr. Westphal took over ownership of the SVH in 1999. Both veterinarians came to Southborough after working for several years as associate veterinarians in other small animal practices in Massachusetts (Randolph and Edgartown). Dr. Ogden and Dr. Westphal met during a rigorous 13-month internship at the prestigious Angell Memorial Animal Hospital in Boston. Dr. Westphal received her veterinary degree from the University of Pennsylvania, and Dr. Ogden received her degree from the University of Minnesota, both graduating with high honors. Dr. Ogden and Dr. Westphal are members of the American Veterinary Medical Association and the Massachusetts Veterinary Medical Association.

Southborough Veterinary Hospital is a 3-veterinarian practice, with a comprehensive support staff of animal technicians, receptionists and managerial staff. We offer a full range of services to both well and sick patients, with on-site access to radiography (x-rays), extensive anesthesia monitoring, surgical and dental procedures and diagnostics such as blood and urine analyzers, ocular tonometry, direct and indirect blood pressure measurements and dental radiography.

At Westford Veterinary Emergency and Referral Center, we are dedicated to providing the highest standard of affordable animal emergency care 24 hours a day, 7 days per week. To provide round-the-clock care, Westford Veterinary Emergency always has veterinarians and nurses within the hospital at all times.

In addition to our outstanding animal emergency care, we also offer such advanced surgical procedures such as cranial cruciate repair (TPLO, TTA), bone fracture repair, open-chest surgery, liver and kidney surgery, and intestinal blockage surgery. Orthopedic and soft-tissue surgical procedures are aided by our fluoroscopy unit. Animal emergency care and advanced surgery is only a part of what we do. Internal medicine consultations, ultrasound, echocardiograms, cardiology, endoscopy, and oncology (cancer treatment), and chemotherapy are also offered in-house. Westford Veterinary Emergency & Referral Center also has the use of an MRI and CT at an off-site location.

Friends, Advocates and Animal Lovers

First and foremost, the veterinarians, certified veterinary technicians, veterinary assistants and client care representatives at Melrose Animal Clinic are unabashed animal lovers. Our mission in life is to advocate for animals and help pets and their owners experience a lifetime of happiness and good health together. We truly enjoy establishing long-term relationships with our pet patients and their families, and will go out of our way to help in any way we can. The better we know your pet and your pet knows us, the more comfortable your visits will be. We appreciate that the close relationships we forge over time enhance our ability to identify and treat potential health issues in their earliest, most easily treatable stages.

Recognized for Excellence

Melrose Animal Clinic has earned accreditation from the American Animal Hospital Association, a distinction achieved by only one in six veterinary practices. Accreditation requires adherence to the highest quality and safety standards, as well as regular evaluations and inspections.

A Level of Caring Like Nowhere Else

Every interaction at Melrose Animal Clinic is based on compassion and respect—for both pet patients and their families. Add an exceptionally knowledgeable and skilled team of health providers, comprehensive services, the most modern diagnostic and therapeutic capabilities, and an extraordinary level of compassion and warmth, and you have a sense of what Melrose Animal Clinic is all about.

Lurie Spay/Neuter Clinic
3516 W. 26th St.
Chicago, IL 60623 - Map it
773-521-7729 (SPAY)

- We performed nearly 18,000 spay/neuter surgeries in 2013.

¿ Over ten years, this reduces the unwanted pet population by hundreds of thousands of animals.

¿ These surgeries are either free or low-cost for pets of families who cannot otherwise afford the procedure.

¿ We perform surgeries both at the Lurie Clinic and on the mobile GusMobile which allows us to reach the areas struggling most with the issue of homeless pets.

- We have spayed or neutered more than 159,000 pets since we started.

Phone: (07) 872 0004
Small Animals: (07) 872 0005
Fax: (07) 871 5060

VETFOCUS is a veterinary club practice, incorporated in 1942. The business has a board of directors who are farmers from the region. They are involved in dairying, sheep and beef breeding and dry stock farming. The club structure ensures that our strategic direction is aligned with the agricultural sector and delivers the services and products that farmers require.

Being an incorporated society creates financial benefits that are passed onto the members as:

- Greater proportion of experienced veterinarians
- Business profits are re-invested in education, technology and equipment
- Cost benefits through bulk purchasing

Course Bulletin

The practice has four branches. Our main branch in Te Awamutu employs eight large animal veterinarians and 15 administrative and support staff. Our other branches are in Hamilton, Otorohanga and Putaruru. In total VETFOCUS employs 58 staff including five dedicated sales staff.

In a service industry it is important to retain staff and VETFOCUS makes an ongoing significant investment into continued professional development for all staff. We also appreciate the importance of providing experience and support. At VETFOCUS, most of our veterinarians have more than 5 years and up to 20 years clinical experience.

Our hospital offers a variety of animal anesthesia services for your pet. The term 'anesthesia' indicates the use of medications to block sensation, typically resulting in unconsciousness. Veterinary anesthesia is used for procedures that require an unconscious animal such as surgery, certain imaging studies (x-rays, MRI, CT scans) or medical procedures. Anesthesia is induced using a variety of injectable and inhaled medications. Pets undergoing anesthesia are typically pre-medicated with an injectable drug. This pre-medication helps the pet relax so that full anesthesia can be induced more smoothly and safely. Next, the pet receives intravenous medication to cause loss of consciousness. A tube is then placed into the pet's upper airway, and gas anesthesia keeps the pet comfortably anesthetized during the course of the procedure. All pets undergoing anesthesia are carefully monitored before, during and after a procedure by our veterinarians and technicians to ensure the best outcome.

<p>214 Main St, Center Moriches, NY 11934 (631) 878-1600</p> <p>At The Moriches Hospital for Animals our professional staff offers compassionate and technologically advanced medical care for your family pet. Endoscopy, Ultra-sound, Carbon Dioxide surgical laser, Digital X-rays and computerized Electrocardiograms are a few of the services we offer. Dr. Kevin Lynch is proud to serve Center Moriches and the surrounding New York area for over 35 years. We understand that no one knows the voice of your beloved pet better than you. Every day our highly trained staff strives to offer veterinary excellence for the benefit of your furry friend. This is why we recommend pre-emptive annual and pre-anesthetic physical examinations and blood analysis. Blood tests indicate the efficiency of organ function and define any imbalances; often before a medical problem becomes evident symptomatically. The Moriches Hospital for Animals also offers alternative life changing therapies such as Certified Canine/Feline massage and Therapeutic Laser treatments.</p>

Subject: VET	Catalog Nbr: 1410

Course Bulletin

SeaVet Clinical Training is an intensive nine day course designed to teach veterinary medical students and veterinarians through didactic lecture, case-based problem-solving and practical experience.

The program also features an educational and interactive hands-on training.

This is a three credit professional class through the University of Florida. Academic credit will only be granted to UF veterinary students.

Continuing education credits may be earned by veterinarians. This course has a maximum of 25 allowed by the state of Florida. If requested, a form will be provided at start of the course to keep track of your hours. If you are not in Florida, your state has the right to refuse the credits. However, the University of Florida College of Veterinary Medicine is accredited with NAVC and out-of-state veterinarians have not been denied credits after attending past SeaVet courses.

IMPORTANT NOTICE: This course is being offered exclusively for Veterinary Students and Licensed Veterinarians. Registrations will not be accepted otherwise.

Course Bulletin

We approach animal health from a holistic viewpoint because we believe that disease is more than just an individual symptom, or set of symptoms, to be treated. Organ systems and functions rely on each other to maintain health. When one system is not functioning at an optimal level, neither are some of the others. Disease is best reversed by supporting all of the compromised systems, so that the body can begin to assert itself and heal itself in a more natural manner. In addition, an animal's environment, its diet, the relationship between the animal and owner, genetics and prior medical treatments all influence and impact the state of health. By looking at and evaluating all of these factors, we are able to develop a treatment plan based on the individual needs of each animal.

140678	Intercultural Outreach Initiative
Subject: VET	Catalog Nbr: 1415
<p>IOI stands for Intercultural Outreach Initiative. We are a Florida-based 501(c)(3) registered, tax exempt, non-profit organization operating in the small community of Puerto Villamil, on the island of Isabela, the most rural of the populated islands in the archipelago of the Galápagos, Ecuador. Founded in 2006, our vision is to help establish an ecologically sustainable and socially stable local economy in the Galápagos by supporting education, conservation and social development for one of its most beautiful islands. We are proud to be the only organization on Isabela that is dedicated to supporting local initiatives now, in order to secure a better tomorrow. We've been lucky enough to have made some incredibly positive and impactful changes to the</p>	

Course Bulletin

local community and are able to continue to do so with the help and support of people that want to make a real difference.

We are all guilty of taking what we have for granted—even here on Isabela. In order to conserve this beautiful place it is important that the people living here have a high appreciation for it themselves, and toward that aim we educate children and adults alike to value and conserve the beauty that surrounds them, and support local initiatives with similar goals to fortify the local economic and social development cycle. We have worked hard since our launch in 2006, and the rewards and benefits we have seen have made our hard effort incredibly worthwhile.

Our organization keeps growing, as does the value that we have brought and will continue to bring to this beautiful island. We have achieved an incredible amount but there is still so much more to do—as our aims and needs keep growing along with us! So...help us help them! Join us on our journey to conserve this truly spectacular place.

The Mississippi State University College of Veterinary Medicine has an elective Shelter Medicine rotation that provides veterinary students with experience in shelter medicine, spay/neuter, and humane education. The program seeks to further educate the next generation of veterinarians to care for shelter animals and to solve the problem of overpopulation of unwanted pets.

Students participate in two week rotations spaying and neutering dogs and cats under the supervision of faculty. This puts these students at a tremendous advantage as most DVM only perform two to three surgeries before graduation. The surgical experience this program provides is unparalleled and instills a spirit of lifelong learning and community service. The program accepts externs from other colleges of veterinary

140737	Delaware County SPCA
Subject: VET	Catalog Nbr: 5456
<p>555 Sandy Bank Rd, Media, PA 19063 (610) 566-1370 The Delaware County Society for Prevention of Cruelty to Animals (Delco SPCA) was established in 1911 with the original purpose of providing watering troughs for work horses around Delaware County. In 2012, the Delco SPCA became a lifesaving organization, reserving euthanasia only for animals that are incurably sick or too behaviorally aggressive to be adopted out into the community. In 2014, we placed a record 3,583 homeless pets into forever homes.</p> <p>We care for and adopt out pets we rescue from overcrowded shelters, pets that are relinquished by their owners as well as animals that have suffered cruelty and neglect. We are not breed-specific and have a loyalty to "bully" breeds like Pit Bulls. In addition to placing thousands of animals into forever homes, we promote responsible pet ownership and combat pet overpopulation through our pet retention programs such as low-cost public veterinary care –predominantly spaying and neutering – pet food banks, animal cruelty investigations and humane education.</p> <p>The Delco SPCA is a 501c3 non-profit, charitable organization registered with the Pennsylvania Department of State. We are not affiliated with any local or state government or federal agency or any other SPCA or humane group. Our work is supported entirely by private donations.</p>

<p>1304 Hardy St Hattiesburg, MS 39401 Phone: 601.544.5678 Fax: 601.544.5679</p> <p>To end the overpopulation and resulting euthanasia of pets in the Pine Belt area by providing high quality, affordable spay and neuter services.</p> <p>History</p> <p>The Southern Pines Animal Shelter Board of Directors recognized the need for a systematic approach to reducing the number of unwanted animals in the Pine Belt area. In mid 2008, the Spay & Neuter planning team was formed. This committee was charged with researching proven methods for reducing unwanted animals in other areas of the United States and making recommendations regarding those methods that would be most appropriate for the Pine belt area.</p> <p>The formation of the Spay & Neuter Clinic was determined to be the best approach. The gold standard for spay/neuter clinics developed by the Humane Alliance of North Carolina was utilized in designing a clinic that would model the best approaches for services provided. The clinic offers high quality, high volume, and low-cost surgeries for cats and dogs.</p> <p>The clinic began as a unit that traveled around the Pine Belt area. In July of 2009 the clinic opened its Hattiesburg location. With help from grants and donors, the clinic is able to offer low cost services for pet owners. As of March of 2014 the Clinic had "fixed" over 25,000 pets and moved to a permanent more visible location on Hardy St. in Hattiesburg.</p> <p>Email: info@getemfixed.com</p>

140757	SPCA of Westchester
Subject: VET	Catalog Nbr: 5470
<p>590 N State Rd, Briarcliff Manor, NY 10510 (914) 941-2894</p> <p>The SPCA of Westchester was founded in 1883 by Ossining resident Mary Dusenberry after she observed horses being mercilessly whipped and beaten as they trudged up nearby hills to deliver heavy loads of coal. Together with caring friends, she obtained land on which to build the Society's first home and established a fund to be used to prevent cruelty to animals. The SPCA is still located on the same spot, making it one of the oldest landholders in Briarcliff Manor.</p> <p>Originally, the SPCA of Westchester was affiliated with the ASPCA of New York City, but became an independent organization in the 1920s. Today, it is the only humane society in Westchester County empowered to enforce laws relating to animal cruelty. Despite this, the SPCA gets no federal, state, or county funds. So we rely solely on the financial support of people who care about the welfare of animals. If you care about animals, we need your help and welcome donations!</p>

140767	Dr. Alison Cornwall
Subject: VET	Catalog Nbr: 5478
<p>979 US Rt 2 802.505.9639 alisoncornwall@gmail.com</p> <p>I'm Dr Alison Cornwall and my mobile large animal practice serves Central Vermont. I treat horses, cattle, small ruminants, camelids, and pigs, and I also perform at home pet euthanasia for all large and small animals.</p> <p>I provide preventative medicine and husbandry as well as all aspects of general medicine and surgery from equine lameness to unwell dairy cattle to goats with skin problems and everything in between. My goal is to provide gentle, complete, and high quality care to every patient that I see while simultaneously offering owner education as it is desired. My mobile service includes digital X-Ray that allows immediate viewing of radiographs as well as reproductive and diagnostic ultrasound capabilities. My recent schooling (I graduated University of California, Davis in 2007) and extensive continuing education help me to stay on top of the most current therapies. I also have many years of practical experience from which to pull when making decisions about the health and wellbeing of my patients. I love field work and working on people's farms and can offer any level of field care. I am well accustomed to working within tight budgets, but also frequently practice very high end medicine.</p> <p>I also serve the small animal population of this area by providing a compassionate at-home euthanasia service for older and ill dogs and cats who are frightened by or too ill to travel to their regular small animal veterinarian's office. While it is never fun for a veterinarian to euthanize any animal, I feel that providing a gentle passing in the loving arms of their owners and in their own homes for older pets is a kindness.</p>

With expertise drawn from years of advanced training, BluePearl's veterinarians tackle some of the toughest medical and surgical conditions. Our specialists use innovative procedures, combined with traditional, proven methods, high-tech equipment and the latest medicines and therapies to diagnose and treat your pet's condition.

Your family veterinarian knows your pet well and, if your pet's condition requires an advanced level of care, your veterinarian may refer you to one of our locations. We work closely with your veterinarian to ensure a personalized treatment plan is made based on your pet's individual medical history.

Our team's goal is to create and deliver a treatment plan that best meets your pet's medical needs and your expectations. Whether your veterinarian referred your pet to us because of an emergency situation or due to a chronic illness, our skilled team is ready to provide the highest quality of care and attention for your pet.

Subject: VET	Catalog Nbr: 5496
769 Route 37 West, Toms River, NJ 08755 At Toms River Animal Hospital, helping you keep your pets happy and healthy has been our passion for more than 52 years. Over that time, we have grown into a state-of-the-art pet care hospital with an exceptional nine-doctor team. Our doctors use their more than 130 years of combined veterinary experience every day to help keep our patients in good health and feeling great. We are committed to offering the best possible care for your pets. Our doctors strive to keep at the forefront of veterinary medicine to ensure we are offering the latest treatments and procedures available. Our exceptional physician team treats dogs and cats, of course, and we also see all exotic pets. Our medical director, Dr. Levine, will often tell us that if a client can fit his or her pet in the car, we can see and treat the pet. We also have an exceptional, board-certified internist on staff to help us keep your pets in great shape, inside and out. Because technology is so important to early, accurate diagnosis and treatment of health issues, we make sure that having the most advanced medical equipment is one of our top priorities. Our high-tech hospital includes in-house digital radiography, digital dental radiography, ultrasound, endoscopy, and an advanced operating facility allowing us to diagnose and treat many of your pet's advanced medical conditions right at our hospital.	

Course Bulletin

Early diagnosis and treatment are the keys to long, healthy lives for our pets, and our patient care team is dedicated to taking great care of our patients. Our experience and years of service in our community help us keep our facility state-of-the-art, but we are committed to maintaining the same personalized client service we've offered since we treated our first patient in 1956. We take care of our clients' pets the same way we take care of our own and we treat our clients the way they like to be treated.

140990	Enrichment Week-Organic Production Medicine	
	Subject: VET	Catalog Nbr: 3020
<p>This elective will focus on the requirements that must be met by organic producers and ways that veterinarians can support organic clients within the allowable list of medications. We will also address the alternative treatments that farmers are likely to employ, so that we can be prepared to communicate the pros and cons of these treatments with their clients. Presenters will include at least one veterinarian and a farmer/producer, and the environment will be discussion and scenario based. We will focus mostly on dairy, and hopefully include practitioners and producers with experience with other types of livestock as well-ranging from small ruminants, beef, swine and/or poultry.</p>		

140991	Enrichment Week-Gender One Health	
	Subject: VET	Catalog Nbr: 3021
<p>The current Ebola outbreak in West Africa has public health specialists scrambling to find solutions to an epidemic that has been difficult to manage because of social and cultural issues. The spread of the infection is intertwined with peoples cultural beliefs, an area most medical practitioners, veterinarians and public health workers are least trained to handle. In the mix but completely overlooked and sidelined thus far by the public health specialists, policy makers, aid agencies and the multiple teams working to contain the epidemic are the gender issues that play a major role in the transmission and containment of infectious diseases and public health outcomes. Understanding gender, as well as culture and beliefs is a key public health competency. The gender differential (biological, social, economic) poses unique health risks for men and women during their life cycle. The diverse roles played by men and women create different exposure mechanisms to domestic animals, wildlife and the environment. Gender roles, the distribution of labor, and access and control over resources play an important part in the biosecurity, control, prevention and response to diseases and emerging pandemics. Therefore gender differences need to be addressed to better understand the risks, to help develop effective control and response strategies and to achieve a better impact. This short course will allow participants to develop critical analysis skills as they explore how gender, the realm of emerging pandemics threat (EPT)and One Health intersect and how policies can be developed and/or implemented to address EPT in a gender sensitive way. Participants will be challenged to consider the implications and benefits of an engendered approach in their specific disciplines and in preventing and responding to emerging pandemic threats.</p>

World Vets develops, implements and manages international veterinary and disaster relief programs to help animals, educate people and have a positive impact on communities. Improving animal welfare and alleviating suffering are high on our priority list but our work extends beyond that. Our programs help to prevent the spread of diseases from animals to humans; our livestock programs help small farmers to pull themselves out of poverty, and our disaster relief efforts for animals directly impact people who might otherwise remain in dangerous situations if the needs of their animals are not addressed.

Dr. Penson offers outpatient medical and surgical care of cats and dogs. X-ray and laboratory services are available at the practice. "Dr. Penson is a highly skilled surgeon and performs thorough physical exams. Having worked in a nonprofit shelter for 24 years, Dr. Penson has spayed and neutered thousands of animals. He encourages follow ups with all surgeries until your pet is fully recovered. All exam room procedures are done in front of you. Dr. Penson will remove dental tarter from your pets teeth during the examination if your pet allows. Ear cleanings are done awake with you during the office visit if your pet presents with an ear infection. Nail clipping is included with the annual examination. Dr. Penson gives a pre-medication at no charge to minimize vaccine reactions in certain high risk breeds or in the use of certain type of vaccinations. Microchipping is available.</p>

Subject:	Catalog Nbr:
VET	1468

This course is designed to provide the students with additional training in anesthesia and surgery methods relevant to the laboratory animal setting. The first portion of the course focuses on principles of anesthesia in laboratory animals with special emphasis on rodents and non-traditional species that are not typically covered in the veterinary curriculum. Pain assessment; analgesic management; determination of humane endpoints and methods of euthanasia are also covered. A rodent anesthesia laboratory is conducted allowing students to gain experience with the following: injectable and inhalant anesthetic agents, various methods of inhalant drug delivery (chamber, mask, and manifold systems), intubation techniques and monitoring techniques. The second half of the class focuses on the principles of aseptic surgery in research facilities including sterilization methods, surgical pack preparation and issues specific to rodents, USDA covered species, amphibians and reptiles. Minimally invasive surgical techniques, microsurgical techniques, and pre and post-operative care and support are also discussed. There are also practical handling laboratories involving rodents, rabbits and fish. These laboratories provide an opportunity for the students to learn appropriate restraint and handling techniques as well as practice common procedures such as injections, oral administration of compounds, catheter placement and blood collection. There are laboratories designed to provide anesthesia experience for rodents and swine.

141397	Enrichment Week-Canine & Feline Behavior	
	Subject: VET	Catalog Nbr: 3024
<p>The goal of this program is to help you to better understand canine and feline behavior, body language and communication. Students will have the opportunity to learn and practice approaches to handling cats and dogs in a veterinary setting that decrease patients' stress and students' risk of injury. Attention will also be giving to discussing ways of minimizing the stress of hospitalization for patients as in our care.</p> <p>Course Objectives:</p> <ul style="list-style-type: none"> - Understand the basics of canine and feline behaviors and social signaling -Learn effective ways to approach and interact with patients -Learn and practice low stress handling techniques for examination and common procedures -Understand basic learning theory to enhance patient compliance and reduce patient fear with effective communication -Learn how to discuss patients' behavioral needs with owners -Become a resource for safe and low stress handling for peers in clinics 		

141398	Enrichment Week-Anatomy Refresher: Dog & Cat	
	Subject: VET	Catalog Nbr: 3025
<p>This short course (two half days) is designed to review surgically relevant anatomy of the dog and cat. The course will take place in the McGrath Anatomy Lab and will utilize unembalmed cadavers; an effort will be made to provide fresh cadavers, but thawed "frozen" cadavers will be available as a backup. The first half-day will be devoted to anatomical review using embalmed prosection specimens. The second half-day will be devoted to performing as many surgical approaches as participants wish to practice. Surgical examples would be: abdomen (spay, cryptorchid, resection and anastomosis, gastropexy, cystotomy, organ biopsy, etc.) extremities (toe, tail and limb amputations), and skin (wound coverage techniques). Note: Intact animals will probably not be available.</p>

There has long been a need for readily-available, 24-hour emergency and specialty care for the pets of Honolulu, Hawaii, and the Pacific Rim. Veterinary Emergency + Referral Center of Hawaii (VERC) was created to meet these needs and is the first veterinary center of its kind to ever exist in the state of Hawaii. As Honolulu's first 24-hour veterinary emergency + specialty hospital, our facility provides a valuable resource to area animals, owners, and referring veterinarians, and offers the very best in modern veterinary care.

141466	Hluvukani Animal Clinic
Subject: VET	Catalog Nbr: 5581
<p>The Hluvukani Animal Clinic (HAC) was officially opened in 2009 and serves the people of the community in keeping their animals healthy and disease free. The resident veterinarian is supported by veterinary students in their final year doing two-week clinical rotations in the community. Schools and dip tanks are visited frequently by students for animal health awareness and information sessions. Individual clinical cases are either treated at the clinic or responded to through an ambulatory service. During their two weeks at the clinic, students interact with ecologists, local state veterinarians, and medical students from the Wits School for Public Health, University of the Witwatersrand who does clinical rotations in human clinics in the area at the same time. These interactions provide unique and exciting opportunities for both veterinary and medical students to interact and learn more about the philosophy and relevance of the 'One Health' approach in this complex environment. The clinic further serves as a centre for the coordination of clinical research in the area and further assist in longitudinal studies and sampling through either students or visiting clinicians.</p> <p>For more on the Department of Agriculture and Rural Development and Land Administration in Mpumalanga and their initiatives go to http://www.mpumalanga.gov.za/dept/agriculture.htm</p> <p>Stand 554, Clare Section B Hluvukani 012 529 8208</p>

141492	HACHAKLAIT Veterinary Services
Subject: VET	Catalog Nbr: 5590
<p>Hahaklait Veterinary Services 38900 Caesaria Industrial Park, P.O.B. 3039 388900 Israel el: 972-4-6279600 Our Beginning</p> <p>Hahakalit was established back in 1919 by a handful of enthusiastic pioneer farmers. The vision they had was to combine a mutual insurance policy with comprehensive veterinary medicine. The initial motive was to protect valuable cattle, which were imported into a hot land, burdened with disease. Hahaklait was founded as a cooperative, which was owned and managed by the farmers for the benefit of the farmers. The veterinarians were contracted as the employees of the cooperative. From its small beginning as a few farms around the Sea of Galilee, Hahaklait grew hand in hand with the Israeli Food Animal Industry to encompass the entire country.</p> <p>Our Mission</p> <p>Today, 85 years later, Hahakalit is still a strong and thriving unique organization both in size and philosophy, in the veterinary world. Hahakalit is a non-profitable organization, still owned and managed by the farmers for their benefit. Our basic goal is to give our clients the best veterinary service at a reasonable cost. Each farm pays a yearly fixed rate per animal in order to cover all routine and emergency medical needs. Thus, Hahakalit has a long term and stable contract with the farm, and is committed to the well being of the animals, as well as to the sound economy of the farm.</p> <p>Our Services</p> <p>Hahaklait believes in intensive service at all levels: sick individual cows, herd health, prevention and control of infectious and production diseases, as well as food safety and animal welfare. Our vets visit each farm two to three times a week, and each cow receives several routine visits per lactation, to make sure she is producing at maximal efficiency. Cows are checked after calving for both clinical and sub clinical diseases, for</p>	

Course Bulletin

reproductive status and before drying up. All the data from each individual cow is collected at the farm and processed by Hahaklait. Hahaklait is also supporting and performing clinical field trials

Our Clientele

Hahaklait serves 900 dairy farms with over 90,000 milking cows, which comprise more than 80% of the dairy cattle population in Israel. These are made up of 190 large Kibbutz herds and 700 smaller Moshav (family) dairy farms. There are approximately 50 beef herds with 20,000 dams and some 250 feedlots with 30,000 steers, as well as 200 sheep and goat farms. The horse population, once the vehicle of our early Vets and a valuable farm force, is now a small portion of our work (1,000) .

We provide quality medicine and surgery for all breeds of cats and dogs, and from the ages of newborn to geriatric. We're always excited to work with the new pet owner or the experienced pet-lover.

At the Animal Medical Clinic, we offer complete medical and surgical services. These services cover routine care and emergency treatment for both the scheduled appointment and drop-off day visits.

We offer in-house diagnostic bloodwork testing for immediate results. We can test for tick diseases (Lyme, Ehrlichia, Anaplasma), heartworm disease, pancreatitis, feline leukemia and feline AIDS. We also can send-out lab work for additional testing.

We have a long standing relationship with both surgical and ultrasound/internal medicine specialists. They travel to our hospital to provide services for our patients, rather than you having to bring your pet elsewhere.

You have access to dental cleaning and surgery, as well as an array of daily maintenance supplies, keep your pet's mouth healthy and breath smelling pleasant.

The Louisiana Animal Disease Diagnostic Laboratory (LADDL) is a full-service AAVLD-accredited laboratory. Housed in the Louisiana State University's School of Veterinary Medicine, the LADDL services the people of Louisiana and surrounding states by providing animal disease diagnostic services to agricultural and general communities in the state of Louisiana.

We conduct necessary research for the continued enhancement of the following outreach services: research development and adaptation of diagnostic tests and protocols, research and investigation of livestock and companion animal diseases impacting the health and well being of the animals and citizens of Louisiana, and research on selective diseases impacting the economics on the animal industries of Louisiana.

The LADDL operates in partnership with Louisiana State University, LSU School of Veterinary Medicine, Louisiana veterinarians, and livestock and poultry producers. We also provide support for the teaching and research programs of the LSU SVM.

History of Newnham Court Equine Clinic

Newnham Court Equine Clinic, part of Newnham Court Veterinary Group, was established in the early 1990s, although the veterinary practice has been established for over 100 years. Since then, it has expanded to become a 7 vet ambulatory practice with fully equipped clinic facilities, and is an RCVS Accredited Equine Practice. Currently, 7 vets work in the practice, supported by nursing, yard and office staff. Our equine vets provide high quality care to horses, ponies and donkeys throughout much of Kent. Our modern, purpose-built equine clinic is based on the outskirts of Maidstone, Kent in view of the beautiful North Downs. The ambulatory practice and clinic facilities are fully intergrated, so your horse, pony or donkey will benefit from the immense depth of knowledge and experience of all 7 vets, whether at your yard, or at the clinic.

Address

Chase Farm Veterinary Hospital
35 Ventura Drive
North Dartmouth, MA, 02747-1244

Chase Farm Veterinary Hospital is a five doctor practice. The goal of our team is to provide high quality care for both our clients and patients in a friendly and informative environment. We are open Monday through Thursday from 7:30 a.m. until 7:00 p.m., Friday from 7:30 a.m. until 6:00 p.m., and Saturday from 8:00 a.m. until 2:00 p.m.

In addition to routine health care and vaccinations, our hospital provides daytime emergency care for our clients and overnight care to our sick but stable patients. We provide diagnostic services such as digital x-ray, digital dental x-ray, and in-house lab work. We provide surgical procedures such as spays, neuters, abscess repairs, and dental extractions just to name a few.

We also provide holistic and alternative care in the areas of acupuncture, Chinese herbal medicine, laser therapy, and underwater treadmill therapy.

Our hospital enlists the professional services of a Board Certified Surgeon and a Board Certified Cardiologist to aid us in our goal in providing high quality care. Through these specialists, we are able to offer our clients referral level care without the need to travel to a referral hospital.

141639	Baker Institute for Animal Health
Subject: VET	Catalog Nbr: 1491
<p>The Baker Institute has long been known for its work on infectious diseases of animals, and that work continues today in studies of several important pathogens, including canine influenza, calicivirus (which strikes cats), canine herpesvirus, the parasite trichinella, and bovine papillomavirus, a virus that recently crossed over from cattle into horses. Evidence indicates that bovine papillomavirus is the cause of the most common type of cancer in horses: sarcoïd tumors, which are invasive wart-like lesions or skin ulcers. Dr. Doug Antczak and his trainees are studying the reasons different horses show different susceptibility to sarcoïds, work that could lead to new methods for treating or preventing this life-threatening disease. For Dr. Antczak, the goal is to relieve suffering in horses, arguably our most helpful and hardworking companion animals.</p> <p>Sheila Reakes, Director, Annual Giving Cornell University College of Veterinary Medicine Box 39 Ithaca, NY 14853 (607) 256-5604 petfriends@cornell.edu</p>

Wildlife rehabilitation is a profession involving the treatment and care of sick, injured or orphaned wild animals with the goal of releasing healed animals back to their natural habitats in the wild. To be released, animals must be able to function in their natural habitats as normal members of their species.

Effective rehabilitation meets the unique physical and psychological needs of each species we treat. It combines aspects of veterinary medicine, animal husbandry, animal behavior, biology and other fields.
