8/16/88

To: RVPs Fr: WW

Amongst the expert consultants identified by Public Affairs is ENV Services, a group that has devised a portable system for measuring a variety of potential indoor air contaminants, not just ETS. ENV's process for analyzing results is not cumbersome, and results can, apparently, be computed very quickly. I see some real potential for use with this group.

If, for example, you can find a third-party sponsor for ENV -- like a union local or chamber or restaurant association -- PAD can pick up their tab for quick building studies which, in many cases, will probably find no ETS problem but which may uncover other severe indoor air quality concerns. The group also has an articulate spokeswoman, Jolanda Janczewski, who holds a masters in Public Health. This lady will be making the rounds for ENV much the same way Gray does for ACVA.

One possible use: suppose you know there will be a "clean indoor air" bill hearing in one week in state capitol X. ENV can go into the capitol the week before, quietly analyze the air, and then be a surprise witness (for a third party ally, one would hope) pointing out that even in this state capitol where smoking is (or is not) banned, there is no ETS problem but there are problems on several other IAQ fronts.

Likewise if you are facing a general workplace bill, ENV could go in and analyze IAQ in several offices, banks, restaurants, etc., and report its findings at a hearing or privately to key lawmakers or allies.

Apparently, ENV will also be speaking out independently on the issue of IAQ and thus selling its indoor air inspection expertise.

This sounds like a dramatic way for us to get the sort of Gray Robertson point across with lawmakers. I'd be happy to discuss this possibility in more detail with you.
