

an on Smoking in Airliners Doesn't Apply to the Cockpit

By SETH MYDANS
Special to The New York Times

OS ANGELES, March 9 — Smoke-
groups said today that they sym-
patized with smoking pilots but were
not better for the health of pas-
sengers, but Federal officials have
not kept smoking.
and argued that it is safer to let the
rest of the plane.
"If, in fact, a cigarette is helpful to
the pilot and co-pilot in a stressful
situation, let them have it," said Dave
Brenton, president of smokers'
Rights Alliance, a lobbying group. "I
just wish people were as sympathetic
with airline passengers who find the
exception for flight crews."
all but unnoticed in the publicity
at the new law was wording apply-
ing to the passenger cabin
docket, but not to the flight deck.
The exception, reported Friday in
a Washington Post, was based on a
study by the National Institutes
Health finding that possible with-
drawal symptoms would pose a
potential risk to the pilot's perform-
ance, said Dr. Andrew Horne, an offi-
cial of the Federal Aviation Adminis-
tration's Office of Aviation Medicine.
"The effect of withdrawal in a
pilot smoker are associated with
increased irritabil-
ity, and with increased irritabil-
ity, anxiety and aggression," Dr.
Horne quoted the report as saying.
These symptoms are becoming
more common among pilots who are
allowed to light up on most do-
mestic flights. Since Feb. 25, smoking
has been banned on all but about two
of the 18,000 domestic flights
daily in this country. Before then, the
Department had banned smoking on
flights of two hours or less.

The flight deck of an aircraft is bet-
ter ventilated than the passenger
cabin and has a separate air circula-
tion system that does not mix with
that of the cabin, Dr. Horne said.
The N.I.H. study on which the cock-
pit exception was based found that
smoking in the cockpit has "negligi-
ble effects on physiological and
psycho-motor functions and therefore
on flight safety."
"But on the other hand," it went on,
"the adverse effects of withdrawal on
a chronic smoker are deemed poten-
tially significant and may have a net
adverse effect on flight safety."
Dr. Horne said the F.A.A. had asked
the Office of Smoking and Health at
the National Centers for Disease Con-
trol to review these findings, as a
basis for future policy decisions.
Lorraine Bennett, a spokeswoman
for the Association of Flight Attend-
ants, which has strongly supported
the smoking ban, said the association
had not yet formulated a position on
the flight deck exception. "We don't
know, pilots shouldn't smoke in the
cockpit because that would seem not
very humanitarian," she said.

On-Time Flights
Department of Transportation this week
based its monthly report on
performance of major U.S.
airlines of flights in
January. Delays caused by
mechanical problems are not
included.

Airline	Jan.	Dec.
Northwest	81.0	76.7
Delta	80.8	74.1
Continental	79.5	71.6
Alaska	76.4	69.7
United	76.4	70.7
America West	75.8	72.8
Delta	75.3	71.4
Southwest	74.8	59.4
Eastern	70.7	69.1
