

Course Bulletin

000100	Foundations of Health and Disease: Integrated Anatomy I
Subject: VMED	Catalog Nbr: 100
This Year 1 course provides students with a foundation in anatomical terminology and anatomy of the musculoskeletal, nervous, cardiovascular, respiratory, digestive, lymphatic, and urogenital systems. Emphasis is placed on learning the anatomy of the dog. The organization and topography of body systems are discussed, and clinically important developmental and anatomical concepts are considered. Radiographic and ultrasonographic anatomy is included in the course. Content from this course is integrated into clinical relevance cases and clinical skills laboratories. Continues as Integrated Anatomy II in the spring semester. In laboratories, students conduct systematic dissection of carnivores (dogs and cats) and examine prosected and preserved specimens. Radiographs and ultrasound images are reviewed. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000101	Foundations of Health and Disease: Integrated Anatomy II
Subject: VMED	Catalog Nbr: 101
Building upon Anatomy I, students learn the head and neck anatomy of the dog and cat, and then compare anatomical structures across rabbits, cattle, horses, small ruminants, and pigs. The organization and topography of body systems are discussed, and clinically important developmental and anatomical concepts are considered. Radiographic and ultrasonographic anatomy is included in the course. Content from this course is integrated into clinical relevance cases and clinical skills laboratories. In laboratories, students conduct examine prosected and preserved specimens. Radiographs and ultrasound images are reviewed. Prerequisite: Completion of the fall semester Integrated Anatomy I course or with permission from the course director.	

000103	Foundations of Health and Disease: Organ System Structure and Function I
Subject: VMED	Catalog Nbr: 103
This Year 1 course provides students with a broad foundation in cell biology, histology, molecular biology, and physiology. Students establish foundational knowledge that can be related to clinical cases. The course begins with cell biology, molecular biology, and histology, and progresses into discussion of each major body system. Continues as OSSF II in the spring semester. Sequencing is aligned with anatomy courses in Year 1 and body system disease courses in Year 2. Content from this course is integrated into clinical relevance cases. In laboratories, students use virtual microscopy which allows viewing digitized microscope specimens on a computer screen. Students access digital slides at home or on campus using their computer. Cases discussions are also included in this course.	

Course Bulletin

Prerequisite: Matriculation into the DVM program or with permission from the course director.

000104	Foundations of Health and Disease: Organ System Structure and Function II
Subject: VMED	Catalog Nbr: 104
This course is a continuation of Organ System Structure and Function I. It explores the fundamental physiological regulatory mechanisms that control normal body functions common to all domestic animals. Sequencing is aligned with anatomy courses in Year 1 and body system disease courses in Year 2. Content from this course is integrated into clinical relevance cases. As in the previous course, physiology and histology lectures and laboratories are interwoven to illustrate how the microscopic anatomy of different organs facilitates their respective specialized functions. Cases discussions are included in this course. Prerequisite: Completion of the fall semester Organ System Structure and Function I course or with permission from the course director.	

000105	Foundations of Health and Disease: Biochemistry
Subject: VMED	Catalog Nbr: 105
This Year 1 course explores the principles of biochemistry highlighting the biochemical processes that regulate metabolism. Emphasis is placed on the importance of biochemistry in veterinary medicine. Clinical examples are presented to provide context for the principles taught in this course. Content from this course is integrated into clinical relevance cases. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000106	Foundations of Health and Disease: Immunology
Subject: VMED	Catalog Nbr: 106
This Year 1 course establishes a foundation in immunology, including the innate and adaptive immune systems, immunization, immunodeficiencies, hypersensitivities, and autoimmune diseases. Clinical examples are presented to provide context for principles taught in this course. Content from this course is integrated into clinical relevance cases. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000110	Foundations of Health and Disease: Pathology
Subject: VMED	Catalog Nbr: 110
This Year 1 fall semester course introduces the general processes underlying disease and the cellular basis of	

Course Bulletin

disease as it relates to shared mechanisms across disease types and species. Includes histopathology, with a focus on the terminology used to describe diseased tissues.

Clinical examples are presented to provide context for principles taught in this course. Content from this course is integrated into clinical relevance cases.

Prerequisite: Matriculation into the DVM program or with permission from the course director.

000111	Foundations of Health and Disease: Epidemiology, Public Health & Food Safety I	
	Subject: VMED	Catalog Nbr: 111
This Year 1 course introduces students to the foundational principles and methods used in veterinary epidemiology, public health, and food safety. Types of epidemiologic studies, measures of disease frequency and association, and relationships between population and individual animal medicine are discussed. Prerequisite: Matriculation into the DVM program or with permission from the course director.		

000114	FHD: Parasitology	
	Subject: VMED	Catalog Nbr: 114

000116	Foundations of Zoo Medicine I	
	Subject: VMED	Catalog Nbr: 116
This Year 1 course establishes a foundation in zoo medicine by discussing the following aspects important in zoo med and general practice: -Reptile anatomy -Avian anatomy -Small mammals anatomy -Comparative physiology -Husbandry and nutrition of reptiles, birds and small mammals Prerequisite: Matriculation into the DVM program or with permission from the course director.		

000130	Clinical Skills and Communication I	
	Subject: VMED	Catalog Nbr: 130
This is the fall semester of the two-semester Clinical Skills and Communications I course. Through active		

Course Bulletin

laboratories, students are introduced to the core handling and examination skills for cats, dogs, cattle, horses, small ruminants, and pigs. Students also learn essential introductory clinical procedures such as IV catheter placement, ultrasound, and suture technique. Additional information modules accompany the hands-on labs to deepen the knowledge of the above species and students complete self-paced learning modules in the simulation labs. Emphasis is placed on self-reflection and growth mindset to encourage competence and confidence with clinical skills. Communications training begins with students working on the four core communication skills with peers. Content from other foundational courses (e.g., Anatomy) is integrated into labs. The course is listed as Not Graded because the grade is recorded at the end of the spring semester.

This course includes practical assessments at the end of each semester. Students complete the practical component of the Comprehensive Milestone Assessment at the end of Year 2.

Prerequisite: Matriculation into the DVM program or with permission from the course director.

000132	Clinical Relevance I
Subject: VMED	Catalog Nbr: 132
This is the fall semester of the two-semester Clinical Relevance I course. It is the first course in the Clinical Relevance Thread, which runs throughout the first three years and facilitates horizontal and vertical integration and faculty collaboration. Students work through cases focused on common and important diseases in the major domestic animal species and answer embedded questions relating to foundational principles taught in other courses. Cases and quiz questions are developed by the course faculty in collaboration with other faculty. Students gain experience recognizing common and important diseases and emphasis is placed on applying foundational principles. Clinical cases motivate students and enhance their learning by helping them see the relevance of the foundational knowledge they are acquiring in other courses. The course is listed as Not Graded because the grade is recorded at the end of the spring semester. This course includes quiz questions embedded in cases and knowledge acquired in the course is assessed in the Comprehensive Milestone Assessment at the end of Year 2. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000134	Research Relevance I
Subject: VMED	Catalog Nbr: 134
This is the fall semester of the two-semester Research Relevance I course. The course focuses on developing research skills and life-long learning habits. A discussion-based course that explores the relevance of research to veterinary medicine with students identifying knowledge gaps and framing research questions. The course is listed as Not Graded because the grade is recorded at the end of the spring semester. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

Course Bulletin

000136	Diversity and Professional Perspectives I
Subject: VMED	Catalog Nbr: 136
This is the first course in the Diversity and Professional Perspectives Thread. Includes Diversity (6h), Professional Perspectives (6h), and Finances & Veterinary Business (2h) modules. Introduces topics relating to diversity, equity, inclusion, and justice (DEIJ) in the veterinary profession. Increases awareness of diversity, improves recognition of discrimination, discusses professionalism, and introduces financial planning. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000137	Veterinarians, Animals, and Society: One Health
Subject: VMED	Catalog Nbr: 137
This Year 1 course introduces students to the concept of One Health and provides examples of interdisciplinary research and interprofessional collaborations in this area. Through small group sessions that promote team-based learning, students explore how diseases and conditions affecting animals overlap and interact with humans and the environment. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000138	VAS: Veterinarians, Animals, and Society I
Subject: VMED	Catalog Nbr: 138
This is the fall semester of the Veterinarians, Animals, and Society I course. It is the first course in the Veterinarians, Animals, and Society Thread, which addresses important aspects of being a veterinarian that extend beyond medicine and surgery. First-year students are introduced to the role of veterinarians in society by exploring human-animal relationships (9h) and international veterinary medicine (9h). Students are given opportunities to expand their perspectives on human-animal relationships, learn about different ways that humans interact with animals, and better understand the role that veterinarians play in international veterinary medicine and society. The course is listed as Not Graded because the grade is recorded at the end of the spring semester. Prerequisite: Matriculation into the DVM program or with permission from the course director.	

000143	Anatomy III
Subject: VET	Catalog Nbr: 143

000150	Diversity & Professional Perspectives I

Course Bulletin

Subject:	Catalog Nbr:
VET	150
The Diversity and Professional Perspectives course will introduce important topics relating to professionalism and diversity, equity, and inclusion (DEI) in the veterinary profession. In addition to understanding the importance of DEI and professionalism in its many forms, students will receive specific advice on professional conduct to follow throughout their program and into their careers. Prerequisite: Matriculation into the DVM program or with permission from the course director	

000225	Diagnostic Imaging
Subject:	Catalog Nbr:
VET	225
This course provides the fundamental principles behind radiography as a diagnostic imaging tool. The first half of the course is devoted to radiation safety, principles of image interpretation, and abdominal radiography, while the second half of the course covers large and small animal musculoskeletal and thoracic radiography. The emphasis is on evaluating the whole animal (not just the organ system of interest). The course serves as a foundation for the clinical radiology rotations during the last year of the curriculum. Prerequisite: Completion of Year 1 courses or with permission from the course director	

000250	Diversity & Professional Perspectives II
Subject:	Catalog Nbr:
VET	250
The Diversity and Professional Perspectives course will continue to explore important topics relating to professionalism and diversity, equity, and inclusion (DEI) in the veterinary profession. In addition to understanding the importance of DEI and professionalism in its many forms, students will receive specific advice on professional conduct to follow throughout their program and into their careers. Prerequisite: Completion of Diversity & Professional Perspectives I or with permission from the course director

VET	6107

006108	607 East Main Street, Meriden, CT 06450
Subject: VET	Catalog Nbr: 6108
Serving the city of Meriden for over 50 years Meriden Animal Hospital (MAH) was built on compassionate animal health care. Our foundation is based on some very basic and fundamental business philosophies about treating employees, customers, vendors, and the community with respect and dignity. At MAH we treat our clients like old friends and their animals like their children. To foster this relationship with our great client base the leadership team starts with the culture of the hospital first. They make sure that the hospital environment is empowering, open, and straightforward, always challenging the status quo and making sure the staff grows not only as employees but as individuals in life.	

006109	Spencer Animal Hospital 401 Main Street, Spencer, MA 01562
Subject: VET	Catalog Nbr: 6109
The Spencer Veterinary Hospital and all of our Team are devoted to your pet's well-being. Since 2006 and continuing on a 30 year legacy, Dr. Jennifer Fagerquist strives to offer excellence in veterinary care to the residents and pets of Spencer, MA and the surrounding areas. At the Spencer Veterinary Hospital . . . Our professional and courteous Team seek to provide the best possible medical, surgical and dental care for the most wonderful creatures on earth – your pets!	

006110	Bethel Animal Hospital - 179 Walkers Mill Road, Bethel, ME
Subject: VET	Catalog Nbr: 6110
Bethel Animal Hospital is a full service Veterinary Clinic serving the Bethel, Maine area. It is a small animal practice not limited to cats and dogs. We also see domestic birds, reptiles, "pocket pets" of all types, even fish and the occasional kangaroo. Our three licensed veterinarians are available for routine well care appointments, same-day urgent care appointments and daytime emergencies. All three are proficient surgeons and our surgery days are Monday through Thursday.

Course Bulletin

006112	Springmill Veterinary Services - 995 State Road 60 East, Mitchell, IN 47446
Subject: VET	Catalog Nbr: 6112
Dr. Jerry and Dr. Karen purchased Spring Mill Veterinary Service in September of 1993. Originally just a food animal veterinary clinic, they expanded their patients to include small animals. Currently, they provide veterinary care for beef cattle, swine, sheep, goats, dogs, cats and pocket pets. At this time, they do not service horses, reptiles or birds.	

006113	Alpine Veterinary Hospital - 2835 Sherman Ave, Monte Vista, CO
Subject: VET	Catalog Nbr: 6113
Located in the beautiful, rural San Luis Valley of southern Colorado, Alpine Veterinary Hospital serves six counties and is the oldest continuing practice in the area. Our practice has five mixed animal veterinarians and two full service locations, one in Monte Vista and one in Alamosa. We offer livestock, equine, and companion animal medicine and surgery.	

006114	Countryside Large Animal Veterinary Services - 3765 West O Street, Greeley, CO
Subject: VET	Catalog Nbr: 6114
Countryside Large Animal Veterinary Services is proud to serve Greeley, Colorado and the surrounding area for everything large animal-related. Our veterinary hospital is owned and operated by licensed, experienced Veterinarians. Our team is committed to educating our clients in how to keep your animals healthy year round, with good nutrition and exercise. Countryside stays on top of the latest advances in veterinary technology and above all, remembers that all animals need to be treated with loving care in every check-up, procedure, or surgery.	

006115	VCA Povar Animal Hospital - 15 First Street, East Providence, RI
Subject: VET	Catalog Nbr: 6115
VCA Povar Animal Hospital is a well-established, full-service, small animal veterinary hospital providing comprehensive medical, surgical and dental care. We provide a broad spectrum of diagnostic procedures through in-house testing and the use of external laboratories. We also work closely with local practices when special diagnostic procedures are required. The facility includes a well-stocked pharmacy, in-hospital surgery suite, in-house digital x-ray capabilities, a closely supervised hospitalization area, and indoor boarding kennels with outdoor walking areas.	

Course Bulletin

We strive to offer not only sound advice, but also the best veterinary care, thus allowing you the enjoyment of your companion for a maximum number of years. Our job is not only to treat your pet when he or she isn't feeling well, but also to help you learn how to keep your best friend happy and healthy.

130455	Urinary Pathophysiology

Course Bulletin

Subject: VET	Catalog Nbr: 221
This course introduces students to the pathophysiology of diseases that occur in the urinary system of domestic animals, including congenital anomalies, infectious diseases, nephrotoxins, immune mediated diseases and urinary tract neoplasms. The effect of these changes on other body systems is also discussed. Basic normal anatomy and physiology are reviewed as necessary to enhance the student's understanding of pathophysiologic processes. Laboratory techniques for diagnosis of urinary tract disease will also be introduced. The course includes a urinalysis wet laboratory and case presentations that help students integrate and assimilate lecture materials. Prerequisite: Completion of Year 1 courses or with permission from the course director	

130565	Reproductive Pathophysiology
Subject: VET	Catalog Nbr: 222
Students will learn the basic reproductive anatomy, physiology, breeding management, and pathology to use in veterinary practice for large and small animals as well as birds, reptiles, and small mammals. The subject matter will form the foundation for the third year Theriogenology course. Prerequisite: Completion of Year 1 courses or with permission from the course director

130783	Marvet
Subject: VET	Catalog Nbr: 4800
Marvet provides an introductory course in marine mammal medicine for veterinary students and veterinarians who have not had an opportunity for exposure to the marine mammal field. It is intended to provide conceptual and fundamental information on marine mammal biology and medical applications in oceanaria, as well as in emerging population health issues impacting marine mammals in the wild. An additional day is set aside for an introductory consideration of marine fish and turtles as they relate to marine ecological health assessments. Class size is limited so that students have a more effective opportunity to experience learning from leading individuals in the marine mammal field. Species: bottlenose dolphins, pygmy sperm whale, manatee, sea turtles. Marvet 1 takes place at Mote Marine Laboratory in Sarasota, FL. Marvet 2 in Sausalito, California at The Marine Mammal Center. Marvet 3 at St. George's University in Grenada. Tuition in 2003 = \$875. Tuition does not include travel, lodging or meals. See website for application information. PO Box 882, College Station, TX 77841-0882 Telephone: (979) 764-9193 Fax: (979) 847-8981 info@marvet.org

130954	Veterinary Emergency Treatment Services (VETS)
Subject: VET	Catalog Nbr: 4865
The elective offers hands-on exposure and experience with an emergency practice. The practice works as an overnight and weekend only emergency clinic. Students on the elective will usually work directly with veterinarians that are completing their program towards American College of Veterinary Emergency and Critical Care certification. The rotation consists of exposure on four nights per week. During a given week, students start working Mon evening at 7 PM until 8 AM Tues morning, and the overnight schedule would be repeated on Fri, Sat and Sun nights. The experience is in a 'real life' emergency practice and will provide those not always typically found in the TUSVM emergency and critical care rotation. Specific questions can go to Dr. Jennifer Ogeer-Gyles at 508-839-5395 or pager # 978-444-0305 or Dr. Ari Jutkowitz at pager # 978-585-4378. 923 Main Street, Walpole, MA Telephone: 508-668-5454	

130957	Hospital of the British Columbia Society for the Prevention of Cruelty to Animals
Subject: VET	Catalog Nbr: 4866
See info in paper file. The hospital has a staff of 5 vets and a support staff of 22. It is a full service facility averaging 600 clients over a seven day week. Case loads are heavy therefore students are exposed to an extensive range of medical and surgical conditions. Externship students are expected to work-up cases with the attending vet, assist in surgery and gain competency in clinical procedures. Additionally, students will have the opportunity to spay and neuter SPCA shelter animals. Students spend time learning and practicing "Companion Animal Herd Health". They will also have the unique experience of accompanying our Special Provincial Constables on cruelty investigations. 1205 East 7th Ave, Vancouver, BC V5T 1R1 Canada Telephone: 604-709-4654 jamiel@vrbspca.bc.ca

4-6 weeks. Extern will accompany the vet and participate in daily activities (which may even include	

Course Bulletin

housekeeping and maintenance work), assist with routine procedures and preventative medicine protocols. Opportunities to participate in operant conditioning of selected species. Assist with the daily care, cleaning and feeding of hospitalized patients and animals in quarantine, medicating those animals which require treatment as well as performing routine lab procedures. One week will be spent shadowing keepers. The student will attend collection plan meetings, keeper update meetings, full staff meetings and informal rounds. The student will also research one aspect of zoo medicine, nutrition, or husbandry and prepare a 30-45 minute presentation to be given at the keepers' meetings or brown bag lunch. Externs also have the opportunity to spend time at the Florida Wildlife Hospital in Melbourne (20 minute drive) or the Folke Petersen Center for Animal Welfare in Palm Beach (80 minute drive), both state-of-the-art wildlife rehabilitation hospitals where the extern will have a more liberal hands-on medical experience with native species.

Beth Nasse email: bnasse@brevardzoo.org Two hotels within walking distance offer discounts for zoo related activities, currently running in the range of \$60/night.

Letter of interest, resume, and letter from one faculty member indicating interest level. No deadline, but slots are first come, first served, only one extern present at a time. Externships should have been completed in large and small animal medicine and exotics, surgery, radiology and anesthesia. Neg TB in last 6 months, current rabies and tetanus vax, must have own insurance and sign waiver of liability.

Subject: VET	Catalog Nbr: 4907
The Companion Avian and Exotic Animal Medicine Service provides primary as well as referral veterinary care for privately owned avian, reptile and small exotic mammal patients and for sick and injured wildlife. We will have openings during some weeks of the 2007-2008 academic year beginning June 19, 2007 and would like to open these rotations to students from other schools and colleges. Rotations requested should be a minimum of 2 weeks and maximum of 4 weeks in length. Students from AVMA accredited schools can come for up to 4 weeks free of charge. Students that wish to stay longer than 4 weeks will be charged \$428/week. Spaces will be filled on a first come, first served basis. You will be responsible for your own travel, room and board. Indicate the start and end date that you are available and which rotations you are interested in. To apply or for more information, please contact Judy Wall, VMTH Student Affairs Coordinator Davis, CA 95616-8747 USA Telephone: (530) 752-0773 Fax: (530) 752-9620 jawall@ucdavis.edu

131167	Metropolitan Veterinary Hospital
Subject: VET	Catalog Nbr: 4948
At Metropolitan Veterinary Hospital, P.S., we believe that prevention is the best medicine. We strive to prevent disease when possible and to detect treatable conditions early on, when treatment can be most effective and least costly. Annual exams are the foundation of a complete health care program. This is the time when we can review the medical history, discuss any ongoing concerns, and investigate any new developments. During the examination visit, we consult on routine care practices and provide owners with feeding, grooming and training advice, where appropriate. Additionally, annual exam visits are an excellent time to discuss the recent advances in vaccination practices and to develop a protocol appropriate for your pet. Small animal practice with some shelter medicine - partnership with the Humane Society spay and neuter program and off site cat adoptions. Significant involvement with state veterinary association and local associations. 401 Fawcett Ave, Suite 100, Tacoma, WA 98402

131229	Rood and Riddle Equine Hospital
Subject: VET	Catalog Nbr: 4973
Rood & Riddle offers to veterinary students an externship program that provides a clinical experience to satisfy the externship requirements for their degree. As a private clinic the amount of actual "hands-on" experience is limited. However, there is an enormous amount of information to be gained by observation and exposure to our heavy caseload. Clinicians, interns and technicians make every effort to explain hospital cases and procedures whenever possible. Externs work with hospital clinicians or ambulatory practitioners on a rotational basis. Externs have the opportunity to observe equine specialists in surgery, anesthesiology, internal medicine, cardiology, ophthalmology and reproduction. Limited on-site housing is provided at no cost to the student, and must be reserved when scheduling an externship. Externs may stay up to one month. Externs are scheduled to rotate through the surgery, internal medicine, theriogenology, and ambulatory services, but may request an emphasis on one particular area, if desired. Letter of reference and application 2150 Georgetown Road, Lexington, KY 40511 Telephone: (859) 233-0371 Fax: (859) 255-5367 ssmith@roodandriddle.com

131234	Woodside Equine Clinic, LLC
Subject:	Catalog Nbr:

Course Bulletin

VET	4975
The externship program at Woodside Equine Clinic will provide a comprehensive learning curve in all aspects of an advanced and progressive equine clinic. The high volume caseload will enhance the individuals clinical competency, diagnostic skills and communication skills. Information will be provided by 8 experienced clinicians/veterinarians in the fields of lameness, surgery, internal medicine, ophthalmology, reproduction, acupuncture and chiropractic, as well as advanced dentistry. Students should have completed at least one year of veterinary school. The practice will ensure that the student has the opportunity to spend equal time with each clinician and participate in all activities. The primary goal is to give the student an in-depth exposure to the type of experience available as an intern. Externs are required to assist the current interns with treatment of hospital cases; assist clinicians in diagnostic and therapeutic care of hospital cases and out-patients; as well as assist clinicians on ambulatory calls. This will include emergency cases. Student must provide own insurance or AVMA PLIT insurance with proof of payment of annual fee. Housing is not available on site, but we will provide you with a list of area housing available for a minimal fee in your application packet. Student will also be expected to provide their own transportation to and from the clinic. Resume required PO Box 989, Ashland, VA 23005 Telephone: 804-798-3281 Fax: 804-798-2703 aberdeen@woodsideequineclinic.com

131260	Pet Partners
Subject: VET	Catalog Nbr: 4986
Pet Partners, a non-profit, low cost spay/neuter and wellness clinic located in Fall River, MA, is offering a 1 week elective rotation to late 3rd/4th year students. The clinic is approximately 1.5 hours from TCSVM. The schedule is as follows: Surgery on Mondays, Tuesdays, and Thursdays. Daily experience for students may include pre-surgical exams/preparation, spaying and neutering of cats, dogs, and rabbits. A wellness clinic on Wednesdays may provide the opportunity to perform physical exams, vaccinations, basic lab testing, and treatment of minor problems in the presence of a client. On Fridays, the clinic has arranged for students to accompany an animal control officer from Fall River and spend time in their shelter. The number of surgeries/clinic exams available for a student to perform in any given week varies depending on the caseload and time available. Students should review notes on sterile technique and spay/neuter surgical approaches prior to their elective rotation. Completion of Sasx core rotation is not required. If you are interested in participating in the above elective, please contact Nancy Horniak. Please note, the clinic does not except students every week and/or holiday weeks. Selection by Lottery 139 Shaw Street, Fall River, MA Telephone: 508.672.4813

131339	Introduction to Veterinary Public Health
Subject: VET	Catalog Nbr: 233
This course challenges veterinary students to explore the relationships between population and public health, animal and human health, and clinical and population-based health practice so that they may understand their roles as public health practitioners and veterinarians. It builds upon students' knowledge of	

Course Bulletin

epidemiology, biostatistics, infectious disease, and immunology using a One Health approach to introduce concepts such as food safety and security, occupational health, environmental health, and One Welfare. Students are also introduced to a number of guest speakers from major public health agencies to understand their mission and mandate as relevant to veterinary medicine. Using sample case scenarios and group discussion format, this course will provide students with a working understanding of public health issues salient to veterinary medicine and encourage students to reflect on the veterinary contributions to the field of public health.

Telephone: 978-337-1260

freddvm@gmail.com

131360	Aquatic Bird Research
Subject: VET	Catalog Nbr: 1073
Centered on loon work, this selective would encompass diagnostic and preventative medicine, captive management, pathology, population biology and epidemiology and toxicology. Species other than loons would also be included.	

131361	Craig Road Animal Hospital
Subject: VET	Catalog Nbr: 5026
We are a 12,000 sq ft, full service, canine and feline veterinary hospital located in the North West region of Las Vegas, Nevada. Services include: Preventive wellness, sick pet care, emergency/critical management, hospitalization, preventative and advanced surgery, laproscopic services, comprehensive dental care - including endodontic therapy, breeding management, examinations for local animal shelter, care for Nevada's US task force canines and local military working dogs, preceptor program accepted by US veterinary medical schools, medical boarding, routine boarding and grooming We work closely with local neurologist, internist, board certified surgeons, cardiologist, ophthalmologist, and critical care specialist. We use telemedicine consultation services for radiographic interpretation. MINIMUM 2 WEEK REQUIREMENT! 5051 W Craig Road, Las Vegas, NV 89130 Telephone: 702.645.5009 Fax: 702.645.0331	

131362	Quarryville Herd Health Associates
Subject: VET	Catalog Nbr: 5027
Students will ride along with one or more doctors in the practice each day for routine herd health and emergency calls. Students will have an opportunity to palpate, use ultrasound, perform abomasopexy, administer IV treatment, and assist at calvings or other emergencies that arise. Students will also have an opportunity to assist in our mastitis lab and review culture techniques and results. We serve herds from 40 -1800 cows. We have both Amish and large freestall herds. Students will have the opportunity to see very modern management as well as "older" management styles. 2004 Beaver Valley Pike, Strasburg, PA 17579 Telephone: 717.786.3670 Fax: 717.786.7739 QHMA@HOTMAIL.COM	

Course Bulletin

131365	VCA Vets and Pets Animal Hospital
Subject: VET	Catalog Nbr: 5028
VCA Vets and Pets is a high-quality full-service small animal general practice that offers in-house laboratory, radiology, surgical, and dental services. In addition, board certified specialists visit the hospital to perform advanced surgeries, ultrasounds, and echocardiograms. Boarding and grooming services are also available. Resume required 3345 El Camino Real, Santa Clara, CA 95051 Telephone: (408) 246-1893 Fax: (408) 246-2451	

131367	Clinical Behavior and Shelter Animal Behavior at the Animal Rescue League of Boston
Subject: VET	Catalog Nbr: 5029
Students who partake in this rotation spend anywhere between one week and one month at the Animal Rescue League of Boston. The students are able to observe and participate in programs for shelter animals (behavioral evaluations, enrichment, dog training, play groups) and behavior appointments for owned animals. We have two experienced veterinary behaviorists who direct the programs and see appointments. We also have two qualified dog trainers who help with the shelter animal programs. Students should expect to spend 5 days a week at the Animal Rescue League, including Saturdays as these tend to be very busy appointment days. As every week is different, we cannot guarantee the number of clinical appointments a student will see. However, when there are no appointments, the students will be kept busy working with shelter animals, reading, watching videos or helping with one of our research projects. Each student is required to prepare either a case or a review of a topic of interest at the end of the rotation. Students will be required to find their own housing. The ARL is close to public transportation. Website: www.centerforshelterdogs.org and www.arlboston.org Comments: Each student's experience will vary depending on the activities of the various departments during their visit. Every attempt will be made to accommodate specific requests for experience, but there can be no guarantee that every experience will be available every rotation. The visiting student is expected to review the Animal Rescue League of Boston's website, to include the position statements in order to familiarize themselves with the organization prior to arrival. Students should wear casual dress (khakis & polos eg). No open toed shoes. A volunteer waiver will need to be signed on the first day of externship. There will be a formal orientation the first day of the rotation, and students will fill out a questionnaire about interests and expectations. Boston, MA Telephone: (617) 226-5632	

131369	The UGA Community Practice Clinic
Subject: VET	Catalog Nbr: 5030

Course Bulletin

131381	Clean Water Action
Subject: VET	Catalog Nbr: 1074
Highly motivated around environmental protection issues. Can be tailored to individual interests. Learn toxicological impacts on aquatic ecosystems. Research federal Clean Water Act and Safe Drinking Water Act needs and violations in Massachusetts. Research issue of sustainable energy campaigns - needs and opportunities. Includes media outreach, voter election issues (green voter issues), organizing citizens and community groups. Clean Water Action 76 Summer Street 3rd Floor, Boston, MA 02110 Telephone: 6174234661	

131392	Day-to-Day Functioning of the Wildlife Clinic
Subject: VET	Catalog Nbr: 1075
Students will primarily assist with day-to-day clinic functions, such as preparing animal's diets and cage cleaning. Will have opportunities to learn clinical laboratory techniques including fecals and CBCs. Students will be able to assist with special projects such as data analysis, bird banding, continuing education conference on avians and exotics. General introduction to hands-on wildlife care.	

131421	Drumlin Farm Wildlife Sanctuary
Subject: VET	Catalog Nbr: 1076
Experience with handling, husbandry, cleaning and feeding of farm animals and native wildlife; good initial exposure opportunity. Educational animals as well as display animals. Monday through Sunday, 9am-12pm. Drumlin Farms 208 South Great Road, Lincoln, MA 01773 Telephone: 7812592205	

131433	Ecotarium
Subject: VET	Catalog Nbr: 1077
Experience involving their animal collection. Selection is by interview not TCSVM lottery. New England Science Center 222 Harrington Way, Worcester, MA 01604 Telephone: 5087919211	

131451	Environmental Protection Agency

Course Bulletin

Subject:	Catalog Nbr:
VET	1078
Experience and contribute to the federal government's environmental efforts in their regional office. Many opportunities mutually advantageous to the veterinary community and to the EPA exist in the areas of resource protection, policy and planning, environmental toxicology/acid rain, wetlands delineation and assessment. Environmental Protection Agency JFK Federal Building, Boston, MA 02203 Telephone: 6179181050	

131458	Clinical Pharmacology
Subject:	Catalog Nbr:
VET	236
This course is designed to illustrate the clinical applications of various drug groups and their interactions. Basic classes of drugs, their mechanisms of action and their primary therapeutic applications are reviewed. The clinical applications of drug groups, pharmacotherapeutic principles involved and the possible drug interactions are emphasized. Emphasis is also placed on the judicious use of drugs to attain maximum benefits with minimum risk. Drugs with a low therapeutic index are discussed in terms of clinical signs to be recognized and the measures to be taken in the event of drug-induced toxicity and emergency. Prerequisite: Completion of Basic Pharmacology or with permission from the course director	

131471	TCSVM Heifer Watch
Subject:	Catalog Nbr:
VET	1079
The purpose of this selective is for you to gain knowledge and experience in working with beef. This watch is especially important for first calf heifers. The selective will consist of a short classroom informative session to demonstrate proper calving presentation, cattle behavior and calf care. If complications arise, calf-care will be required from the student. Most importantly, how to deal with dystocia will be discussed. The selective will run as follows: A list of calving dates will be given from which you can choose the dates that are needed to be covered. Students may monitor the pregnant dams from the heated herdspersons office. The herdsman will carry a pager and will immediately return page to help assess any complications. Students involved with this selective will be given the opportunity to gain hands-on experience in the parturition process of beef cattle.	

131494	Museum of Science
Subject:	Catalog Nbr:
VET	1080
Previous experience in animal care preferred. Interest in working in a museum environment. Good interpersonal skills. The intern will assist in routine care and maintenance of the museum's live animal collection and animal exhibits. This collection currently consists of more than 100 animals (primarily wild species). The intern must arrange to receive academic credit for the internship. Send a cover letter, resume	

Course Bulletin

and two letters of recommendation. One recommendation should be from a professor to Sandra Smith, Intern Program Coordinator.

Museum of Science

1 Science Park, Boston, MA 02114

Telephone: 6175890314

131524	Natural Heritage and Endangered Species Program
Subject: VET	Catalog Nbr: 1081
Should have interest in environmental studies, natural resource planning. Conservation projects include analysis of statewide wildlife rehab data, processing field biologists' observations of Mass. Rare species and/or analyze endangered species records, help evaluate potential impact of development proposals on rare species/ecologically significant natural communities, and/or preparation of state endangered species or zoonotic disease fact sheets. Call for current information and opportunities. Projects vary from semester to semester. Mass Division of Fish and Wildlife Route 135, Westboro, MA 01581 Telephone: 5087927270	

131527	Hemic-Lymphatic and Clinical Pathology
Subject: VET	Catalog Nbr: 237
The clinical pathology course covers the use of laboratory data in assessment of animal health and disease states, as well as pathophysiologic mechanisms and artifacts that can cause abnormal test results. The course is divided into three sections, with the first covering hematology, including assessment of erythrocytes, leukocytes and platelets, as well as coagulation and its disorders. This is followed by instruction on the use of cytologic examination to evaluate cells from various organs and lesions, as well as assessment of body cavity effusions. The third section of the course covers the principles and application of serum biochemical analysis to evaluate patients, with additional discussion of the use of immunodiagnostics, as well as integration of hematology, chemistry, and cytology findings to aid in diagnosis of disease processes. The course emphasizes the development of an organized method for interpretation of laboratory data and its application to clinical cases. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131535	Nature Conservancy
Subject: VET	Catalog Nbr: 1082
Prepare abstracts for stewardship staff and other land managers with current management related information on those species and communities that are most important to protect or control. Summarize data, speak with researchers/academic community, land managers. Learn natural history of endangered species and computer data management. Species include box turtle, short-eared owl, black rat snake, bluet	

Course Bulletin

damsel flies, others. Prerequisite: interest in biological monitoring, natural resource planning. Additional info available at Student Affairs Office.

Nature Conservancy

759 Milk Street Suite 300, Boston, MA 02109

Telephone: 6174232541

131548	Northeastern University
Subject: VET	Catalog Nbr: 1083
Should have strong interest in wildlife. Take an ecological and systematic perspective working in wildlife biology with mammalogist. Range from shrews to bears and birds. Ectoparasites, carnivore food habits, necropsies, taxonomy, other natural history topics. Research, field work (time of year dependent). Can be tailored to individual interests. Consider meeting with Dr. Jones ahead of selection to talk in terms of specific opportunities for given semester or summer. Department of Biology 360 Huntington Ave, Boston, MA 02115 Telephone: 6173732851	

131560	Wilderness Society
Subject: VET	Catalog Nbr: 1084
December/January, May/June, September 1. Part or full time. Three month, 20 hour/week minimum commitment, flexible hours. Prerequisite: Energetic, organized, responsible, self-starter with excellent written and verbal communication skills, neat and thorough work habits and the ability to work well independently and as part of a team. Interest in environmental issues, working knowledge of IBM-compatible computers, experience with other environmental or public interest organizations. Duration of internship could be extended or renewed at a later time. The Wilderness Society is devoted to preserving wildlife and wilderness, protecting America's prime forests, parks, rivers, deserts, and shorelines, and fostering an American land ethic. Cover letter and resume required. Send to: Julie Wormser. Wilderness Society 45 Bromfield Street Suite 1101, Boston, MA 02108 Telephone: 6173508866	

131574	Topics in Clinical Specialization
Subject: VET	Catalog Nbr: 1085
There are now 21 recognized veterinary specialties, from Surgery to Pathology to Zoo Medicine. Specialization offers a wide variety of career options for veterinarians but is not right for everyone. This selective allows students to explore options for specialization early in their careers to determine whether it's right for the individual and, if so, which specialty fits them best. In addition, for students who wish to pursue specialization, a program comprised of activities such as clinical rounds, clinical experience, and clinical research projects can be developed to help make them as competitive as possible in the internship/residency matching program.	

Course Bulletin

131584	PBL III
Subject: VET	Catalog Nbr: 238

131587	Accelerated Clinical Excellence Skills
Subject: VET	Catalog Nbr: 1086
This flexible, self-styled selective is designed to help students develop the skills required to be an excellent veterinary clinician, whether in specialty or private practice. These skills include Evidence-Based Medicine (EBM(Evidence-Based Medicine)), the use and critical appraisal of the literature to develop best available treatment practices, effective client communications, career development, and lifelong learning. Students can select from numerous available experiences that can be selected based on individual interests, and credit can be accumulated over the course of a semester, a year, or over two academic years.	

131604	Accelerated Clinical Excellence Journal Club
Subject: VET	Catalog Nbr: 1087
Journal club will help students to keep abreast of new developments in areas of their interests in clinical veterinary medicine and to engage in informal discussion and interaction. The ability to critically appraise the evidence is a skill required to become the best possible clinician and this, along with presentation skills will be enhanced through small group discussions of current veterinary articles. Journal club sessions will be led by clinical faculty in areas of interest to the students.	

131619	Canine Splenectomy Research
Subject: VET	Catalog Nbr: 1088
The purpose of the project is to identify predictors of short term survival (survival to discharge) in dogs undergoing splenectomy for splenic mass lesions. Many dogs with splenic mass lesions--particularly those with splenic hemangiosarcoma--have a poor long term prognosis, and a better understanding of the clinical parameters that may predict survival to discharge will enable us to better advise owners considering surgery and hospitalization for their dogs. We have identified approximately 1,100 dogs that have undergone splenectomy for splenic masses during the past several years. We need to assemble a team of about four to five selective students to review the patients' records in FIRST (the hospital's electronic medical records system) and gather clinical data on the patients. The data will then be analyzed statistically at the end of the semester. This selective will give students an opportunity to learn about the design of a large clinical retrospective study, to gain an understanding of the clinical issues surrounding the management of patients with splenic masses, and to participate in data collection for a research project. Students should be prepared to spend a minimum of four hours per week working on the project.	

Course Bulletin

131634	Tufts Ambulatory Clinic
Subject: VET	Catalog Nbr: 1089
Third year students only. Two students per day. Tufts Ambulatory Clinic 149 New Sweden Road, Woodstock, CT 06281 Telephone: 8609742780	

131650	Dr. Jeffrey Griffiths
Subject: VET	Catalog Nbr: 1090
Observational involvement with an infectious disease section. Includes infectious disease rounds with exposures to issues and concepts of public health, immunology, microbiology and clinical medicine. Tufts University School of Medicine 136 Harrison Ave Public Health and Family Medicine, Boston, MA 02111 Telephone: 6176366941	

131663	TCSVM Anatomy Lab
Subject: VET	Catalog Nbr: 1091
Students may choose to do any of the following (one at a time):# Preparation of skeletons: includes preparation of bones and mounting skeletons.# Vascular cast preparations: learn techniques to inject plastic polymers into blood vessels and prepare vascular casts of animal limbs, organs, etc.# Plastic embedding techniques: learn to embed sectioned body parts in clear plastic.# Embalming techniques: learn the techniques of whole body preservation.# Preparing videotaped demonstrations for anatomy teaching.	

131664	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
The objective of this elective course is to give students an introduction to how students spend their day during their fourth year rotations. The experience is primarily observational. Each student will be assigned to one full day where they will shadow a fourth year student on one of the following services: Large animal medicine, Tufts Veterinary Field Service (TVFS), wildlife clinic, Tufts at Tech, Tufts Veterinary Emergency Treatment & Specialties (TVETS), dermatology, emergency/critical care, neurology or the Luke and Lily Lerner spay neuter clinic. The goal will be for students to gain insight into the responsibilities of a 4th year student, the flow of patient care, and communication both within the hospital and with clients. Students will be required to complete an assignment on Canvas following completion of their rotation. No textbook is needed for this course. A single short introductory Power Point presentation will be available on Canvas before the rotation starts.	

Course Bulletin

Prerequisite: Completion of Year 1 courses or with permission from the course director

131682	International Development
Subject: VET	Catalog Nbr: 1092
This selective will provide students with an introduction to: * International development theory* The role of veterinarians in international development* Support to current international projects being implemented by the International Veterinary Medicine Section* Opportunities to interact with veterinarians and veterinary students* in international settings Prevention and control of diseases of international importance* Socio-economic aspects of animal production and health* Global Health	

131698	Children's Hospital
Subject: VET	Catalog Nbr: 1093
Involvement with variety of species including: rodents, dogs, swine, sheep and rabbits. Experience could include involvement in laboratory animal care, surgery and postoperative management, basic techniques such as phlebotomy. Children's Hospital 300 Longwood Avenue, Boston, MA 02115 Telephone: 6173555062	

131713	Introduction To Zoological Medicine
Subject: VET	Catalog Nbr: 240
This course provides the introductory material necessary to set the stage for the Zoological Medicine survey course given in the third year. In this course we explore the topic of conservation and wildlife medicine and introduce general concepts of taxonomy, husbandry, physiology, and conservation of avian, small mammal, reptile/amphibian, and fish species. Additionally, a lecture is dedicated to honeybee medicine. Career options in free-ranging wildlife, zoo animal, laboratory animal, aquatic animal and exotic companion animal medicine are also presented with the aim of developing an appreciation for the role of veterinarians in non-traditional settings. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131714	Harvard Primate Center
Subject: VET	Catalog Nbr: 1094
Second and third year students only. Clinical rounds; specialized involvement in medical primatology and gastroenterology. Prerequisite: students should be interested in lab animal and exotic animal medicine. Note:	

Course Bulletin

Health hazards potential. Monkeys and hepatitis, be aware and inquire. Current TB test required. Mornings only. Minimum of 10 exposures required for credit.

Harvard Primate Center

1 Pine Hill Drive, Southboro, MA 01772

Telephone: 5086258183

Fax: 5086258190

131732	Introduction to Laboratory Animal Medicine
Subject: VET	Catalog Nbr: 1095
This selective is an introduction to the use of animals in biomedical research and the role of the laboratory animal veterinarian. In the first half of the course, presentations from experts in the field cover regulatory control of research animal use, the role of the Institutional Animal Care and Use Committee, animal models in biomedical research, and ethical use of animals. A laboratory animal anatomy module includes three dissection labs devoted to anatomy of rodents, lagomorphs, hamsters, ferrets, and gerbils. The second half of the course is focused on care of research animals and design of research animal facilities. The class will tour a barrier rodent housing facility, a rodent facility using robotic technology, and a primate facility. Students are expected to attend all classes, labs, and tours. They will be required to write one analysis paper on research animal ethical cases and to work in groups to create a design for a multi-species research animal facility. The class holds a mock Animal Care and Use Committee meeting. This class serves as an introduction and required pre-requisite for admission to the Masters in Laboratory Animal Medicine combined degree program at the Cummings School. Students who do not wish to enroll in the masters program are welcome to take the class as a 1 credit selective.	

131736	Transboundary and Emerging Diseases of Animals and Initial Accreditation Training
Subject: VET	Catalog Nbr: 241
The Transboundary and Emerging Diseases of Animals and Initial Accreditation Training (TEDA/IAT) course is an online self-paced course designed to provide students with a fundamental understanding of and ability to recognize the majority of TEDA, the role of the veterinary profession in preventing, detecting, and responding to incursions of TEDA the role of the OIE, USDA, federal and state governments in responding to TEDA and the impact TEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131745	Massachusetts Institute of Technology
Subject: VET	Catalog Nbr: 1096
Fridays are not an option. Provides diagnostic laboratory and pathology services to MIT and other institutions. Veterinary care and maintenance of animal health at MIT are primary missions, integrated with diagnostic laboratory services, research funded by NIH and private industry, and postdoctoral training in laboratory	

Course Bulletin

animal medicine. Research focuses on infectious diseases in laboratory animals and animal model development. Significant interaction with the biomedical research community.

Massachusetts Institute of Technology

77 Massachusetts Avenue, Cambridge, MA 02139

Telephone: 6172531757

131751	Accelerated Clinical Excellence (ACE)
Subject: VET	Catalog Nbr: 242
The overall goal of the ACE course is to give students the skills required to be the best possible clinician. This course will provide core information about excellence in clinical practice and will be complemented by a variety of optional opportunities available to students through the ACE course. The content of the ACE course is intended to cover areas which are not specifically addressed in other parts of the curriculum, but which are critical aspects of becoming a successful clinician, whether in specialty or private practice 1) Explain what Evidence-Based Medicine is. 2) Recall the core principles of Evidence-Based Veterinary Medicine. 3) Locate information using appropriate reference sources (e.g. textbooks, journal articles, conference proceedings and web sites). 4) Evaluate the credibility of a source's currency, accuracy, content, appropriateness and objectivity (peer reviewed, scholarly or popular sources) to support utilization of best available treatment practices. 5) List the steps in the clinical reasoning (CR) process. 6) List prescribed veterinary opioids with potential for abuse. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131760	TCSVM Clinical Equine Exercise Physiology
Subject: VET	Catalog Nbr: 1097
Second year students only. Exciting, dynamic, practice-oriented, fun - could this really be physiology? The answer is a resounding YES! when you're talking about equine exercise physiology. Whether you're competing with own horse, planning to be a general practitioner, or looking for a career in sports medicine, this selective will give you a good foundation for understanding what is happening in the exercising horse. This seminar-style selective will review cardiovascular and respiratory function in the exercising horse, muscle metabolism, exercise and the immune system, training for speed, strength and endurance, long-term effects of training, the effects of heat and humidity in the exercising horse, nutrition for the sport horse, the use of ergogenic aids, measurement of VO₂max, use of treadmills and heart monitors performance. We will meet once a week during the fall semester for two hours. Discussion will be based on primary literature-you'll learn what journal to read, and how to read then effectively. Meeting times are flexible. This course will also be a pre-requisite for the fourth year clinical treadmill and endoscopy elective.	

131765	Skeletal Pathobiology
Subject:	Catalog Nbr:

Course Bulletin

VET	243
The objective of the Skeletal Pathobiology course is to offer the veterinary student a more natural learning progression from the normal anatomy, histology and physiology of the muscle and skeleton systems that are taught in the first year of the curriculum. It will provide students with the basic pathophysiology of bone disease and the mechanics of fracture healing, preparing the students for the 3rd year curriculum where they will learn about specific bone and joint diseases and treatments. By setting the groundwork in the 2nd year with this course, the 3rd year curriculum can more appropriately address the clinical treatment of these musculoskeletal disorders (through the presentation of cases with musculoskeletal diseases and discussion of treatment options) without having to go over basic principles, which currently usurps most of the time. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131776	TCSVM Large Animal Medicine
Subject: VET	Catalog Nbr: 1098
Involved in management of outpatient/inpatient medicine cases at the HLA. Only one student allowed per morning or afternoon. Following completion of selection process, contact Dr. Paradis as a group to coordinate schedules, be flexible.	

131790	TCSVM Large Animal Surgery
Subject: VET	Catalog Nbr: 1099
Involvement with management of equine outpatients and inpatients.	

131801	Ethics & Veterinary Medicine
Subject: VET	Catalog Nbr: 245
This course acquaints students with ethical issues in various aspects of veterinary medicine through short faculty presentations and reading assignments. Students then analyze and discuss these current ethical issues in small groups. The course emphasizes the process of problem and importance of communication in addressing ethical issues. Thoughtful and respectful debates are encouraged during small group discussion. Prerequisite: Completion of Year 1 courses or with permission from the course director	

131806	TCSVM Neonatal Intensive Care
Subject: VET	Catalog Nbr: 1100
Nights and Weekends, March through June options. 45 hours required for 0.5 credit. If necessary, could carry over hours from Year I to Year II or Year II to summer and receive credit after full participation. Students will	

Course Bulletin

work closely with newborn critically ill foals on nights and weekends.

131823	Bristol County Veterinary Hospital
Subject: VET	Catalog Nbr: 1101
All aspects of mixed animal practice. Be prepared to go into the evenings if calls require it (mixed equine/SA option). Bristol County Veterinary Hospital 60 Olney Street Briarwood Plaza, Seekonk, MA 02771 Telephone: 5083363381	

131836	Natural History Collection
Subject: VET	Catalog Nbr: 1102
This selective, offered jointly through the Wildlife Clinic (Dr. Courchesne) and Anatomy (Dr. Hawkes) will serve to build a foundation for a permanent natural history collection. The ultimate aim is the establishment of a campus natural history museum open to members of the public as well as a variety of researchers. Students participating in the selective will be instructed in preparation of avian study skins, and skeletal preparations from a variety of animal classes. Other techniques which may be included based on student interest could include plastination and the preparation of mammalian pelts. The selective will be hands-on and tailored to student interests. Students with prior experience in disciplines such as botany, entomology or parasitology are welcome to bring skills and project ideas as the selective is by no means limited to the techniques listed above.	

131850	Dr. Bryan Parrott
Subject: VET	Catalog Nbr: 1103
Prefer afternoons, not weekend. Call to arrange schedule. Dr. Bryan Parrott PO Box 298, Hamilton, MA 01938 Telephone: 9784686307	

131861	Large Animal Medicine & Surgery I
Subject: VET	Catalog Nbr: 301
Large animal medicine and surgery are taught together to facilitate the learning of the problems and treatments of large animal species. Diseases are discussed by systems within the species affected. The approximate proportion of lectures per species is as follows: equine - 35%, bovine - 35%, small ruminants and llamas - 15% and swine - 10%. Medicine lectures utilize a problem-oriented approach using case examples for diseases. The surgical lectures provide students with guidance on the didactic aspects of surgical diseases of	

Course Bulletin

large animals. The course is team taught by the large animal hospital and ambulatory faculty. It is supplemented by guest lecturers who present information on beef and swine production, viewed from the perspective of the animal industry. The course builds on previous courses in the basic sciences on pathophysiology and clinical pathology.

Recommended text for the medicine portion of the courses is Large Animal Internal Medicine, Edited by Brad Smith, 4rd edition. Sports medicine lectures can be augmented with the reference: Diagnosis and Management of Lameness in the Horse edited by MW Ross and SJ Dyson (2003). The text , 4th ed, edited by Auer and Stick is the recommended reference for the equine surgical portion of the courses.

131866	Dr. Mary Kahan
Subject: VET	Catalog Nbr: 1104
Primarily equine lameness practice with acupuncture. Requires student with definite equine interest and must be prompt and on time. Dr. Mary Kahan 3 River Street, Byfield, MA 01922 Telephone: 9784625553	

131881	Hampton Veterinary Services
Subject: VET	Catalog Nbr: 1105
Afternoons and full weekdays available. Please call between 8am and 1pm to arrange scheduling with Dr. Cowley's secretary Laurie. Hampton Veterinary Services 135A Northhampton Road, Easthampton, MA 01027 Telephone: 4135274414	

131896	Massachusetts Equine
Subject: VET	Catalog Nbr: 1106
Clinical and ambulatory equine practice with emphasis on lameness. Opportunity requires Saturday in lieu of afternoons/week to fulfill requirement for credit. Massachusetts Equinec 75 Locust Street, Uxbridge, MA 01569 Telephone: 5082756511	

131912	Racetrack Medicine
Subject: VET	Catalog Nbr: 1107

Course Bulletin

Practice serves Rockingham and Suffolk Downs. Can do full day Saturday or Sunday in lieu of two afternoons/week to fulfill requirement for one credit.

Rockingham Park

Rockingham Park Boulevard, Salem, NH 03079

Telephone: 6033296689

131924	Small Animal Medicine and Surgery I
Subject: VET	Catalog Nbr: 303
This course is intended to develop skills in clinical reasoning and reinforce common small animal disease presentations, laboratory findings, and treatments. It provides an opportunity for the student to integrate knowledge obtained in prior courses to evaluate a clinical problem. Depending upon the specific problem, the student will evaluate historical, physical, laboratory and radiological data to formulate a diagnostic and treatment plan. For common surgical problems, discussion will emphasize diagnostics, surgical options, indications for specific procedures, post-operative care and possible complications. Prognostic factors for both medical and surgical problems will be discussed. Prerequisite: Completion of Year 2 courses or with permission from the course director	

131927	Salmon Brook Veterinary Hospital
Subject: VET	Catalog Nbr: 1108
Prefer to set up schedule with student. Saturday best but as season slows may not work all day Saturday. Afternoons are possible but may have difficulty meeting up with student in afternoon. Salmon Brook Veterinary Hospital 136 Salmon Brook Street, Granby, CT 06035 Telephone: 8606537238	

131942	TCSVM Pathology
Subject: VET	Catalog Nbr: 1109
Necropsy room experience.	

131956	Theriogenology
Subject: VET	Catalog Nbr: 305
This course embraces the clinical aspects of veterinary reproductive medicine. It builds on information presented in the second year course covering reproductive physiology and pathology. Students will learn how to examine the reproductive tract of pregnant and non-pregnant animals, diagnose, treat, and manage reproductive disorders of large and small animals and be able to evaluate and improve reproductive efficiency	

Course Bulletin

in herds and flocks. Practical breeding management, obstetrics, embryo transfer, small animal pediatrics, and assisted reproductive technologies are also covered.

Prerequisite: Completion of Year 2 courses or with permission from the course director

131958	TCSVM Adventures in Veterinary Medicine Program
Subject: VET	Catalog Nbr: 1110
DVM students staff the day-to-day activities of the AVM Program. AVM is an educational, career exploration program for individuals (6th graders through adults) interested in pursuing a degree in veterinary medicine. Duties include speaker confirmation and support, farm animal management and processing, presentation of information on veterinary specialty areas, leading discussions, mentoring prospective applicants to the school, providing information about the DVM program/Tufts, managing the shadow program, and other duties as required by the Director. If interested, submit cover letter and resume well ahead of summer selective selection dates to Laura Melbin-Diniz, Administration Building, Room 216, Grafton Campus. Selected candidates will be interviewed for the positions. Must have excellent animal-handling, interpersonal and organizational skills as well as reliable transportation. 1 credit, summer selective option: 3-4 students (M-F); 11 weeks (salaried).	

131973	Community Service
Subject: VET	Catalog Nbr: 1111
This flexible self-styled selective was developed to support TCSVM's commitment to make a positive contribution to the community. It provides DVM students the opportunity to participate in a variety of experiences, for which they can accumulate credit over the course of a semester or over two academic years, depending on how they structure their involvement. Eligible activities may include: * speaking engagements* giving campus tours* working on/participating in STEM (Science, Technology, Engineering and Math) education and conferences* volunteering at off-campus community service organizations or with TCSVM groups	

131987	Gap Junction
Subject: VET	Catalog Nbr: 1112
Gap Junction is an after school program for middle school children from school in the Worcester and Grafton school districts. Each middle school group attends a series of four workshops, held on Tuesday afternoons at the veterinary school campus in North Grafton. Topics focus on the study of body systems. Sessions begin with a brief lecture and are followed by hands-on laboratory exercises and a question-and-answer session. Radiographs, anatomy specimens, stethoscopes, and power point presentations are used to hold the interest of the students. Visits to the lamb shed and horse barn, located on our North Grafton campus, offer urban/suburban students exposure to animals they may never have seen up close. It is a great opportunity to excite middle school students about biology and for veterinary students to develop communication skills for translating complex medical ideas into understandable information to the lay person!	

Course Bulletin

132003	Teaching Specimen Preparation
Subject: VET	Catalog Nbr: 1113
In this selective students will assist in preparing anatomical specimens for teaching and display, with the humane-oriented goal of decreasing the school's use of animals for anatomy and related courses. Students will learn a variety of techniques for preparing anatomical specimens, with an emphasis on plastination. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying hollow viscera, and corrosion casts of bronchial and vascular systems. Individual projects are encouraged.	

132016	Anesthesia & Analgesia
Subject: VET	Catalog Nbr: 307
This course is designed to teach the principles of anesthesia and their application to clinical cases, the pathophysiology and assessment of pain, and methods for management of acute and chronic pain. Topics include: pre-anesthetic evaluation and preparation of patients, species-specific anesthetic techniques, pharmacology and physiology of anesthetic and analgesic agents, purpose and use of anesthetic equipment, waste gas scavenging, and special considerations and potential complications of anesthesia. At the end of the course some typical anesthesia case scenarios are presented with a description of how to formulate an appropriate anesthetic plan for each case. In addition, there are pain case studies with a description of how best to manage the patient's pain in each instance. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132018	Introduction to Geographic Information Systems
Subject: VET	Catalog Nbr: 1114
A three week workshop that will introduce students to the fundamental concepts of Geographic Information Systems. It will consist of a theoretical introduction combined with hands-on computer tutorials utilizing ArcGIS software. This course is designed for novices in GIS with specific focus on mapping and spatial analysis applications to human and animal health. Topics discussed in the class include field data collection for mapping using GPS, basic GIS mapping methods, spatial data sources, etc. Students will meet with the GIS instructor for lectures and labs. Students will complete tutorials on their own to develop their GIS software skills. The students will then work with their research mentor to incorporate GIS into their projects. Selective credit for this course should likewise be arranged independently with research mentors.	

132031	Pet Loss Hotline
Subject: VET	Catalog Nbr: 1115
The Pet Loss Hotline (PLH(Pet Loss Hotline)) provides grieving owners with an opportunity to discuss the loss	

Course Bulletin

of their pet with concerned and compassionate veterinary students. The PLH(Pet Loss Hotline) is part of the Animals in Community track of the Center for Animals and Public Policy at the Cummings School of Veterinary Medicine. As PLH(Pet Loss Hotline) volunteers, veterinary students will obtain experience in supporting owners who have experienced the loss of a pet. The overall goal is for students to put this experience to use during their clinical training and veterinary practice. An experienced counselor will provide training in hotline work. Training includes developing skills for listening and communication, as well as recognizing and dealing with crises. Training sessions will be held on the Grafton Campus, and will be augmented by monthly debriefing meetings with a counselor and faculty advisors to discuss issues (including feelings) that may have arisen during hotline work. Twenty four-hour emergency consultation will be provided as a backup to participants by faculty advisors and counselors as needed. Students *must* attend the mandatory training sessions and monthly debriefing meetings. Student volunteers will be scheduled to work evening PLH(Pet Loss Hotline) shifts during which they will take incoming calls and respond to hotline voice-mail messages. In addition, each semester, students will be required to write a one page case summary of a PLH(Pet Loss Hotline) call that they received, to be submitted to faculty advisors for critique. The aim of this case summary is to encourage the student volunteer to think about the call that they received and how they handled it, as well as to receive feedback from the faculty advisors. Students participating in one semester plus summer break, or two semesters, will receive one credit. Those who participate in one full year (sequential fall, spring, and summer selective blocks) of hotline support will obtain two full credits. In order for the hotline to be adequately staffed, preference may be given to those students attempting a two credit selective. The Pet Loss Hotline has been functioning since 1996. The faculty advisors and student volunteers are very excited about the growth in popularity of the hotline and the opportunity that it provides us with to help people, who have lost a pet, in their time of need. We constantly receive letters and cards from pet owners around the country thanking us for our work. In addition, press releases have unanimously applauded what they see as our vital role in the support of grieving pet owners. The benefits go far beyond a warm, fuzzy feeling. Students find that the training sessions improve their listening and counseling skills as well as communication skills. If you don't know what to say someone if their animal dies, if you can't imagine how to deal with people crying after their animal is euthanized, and if you want to make a real difference, sign up for this selective.

Pet Loss Hotline Faculty Advisors- Dr. Claire Sharp := Dr. Sharp is an Assistant Professor in the Department of Clinical Sciences. She is board certified in small animal emergency and critical care medicine; working both in the emergency room and intensive care unit of the Foster hospital for small animals. As well as her clinical duties, Dr. Sharp is course director for the Problem Based Learning course, teaches in a variety of other courses for preclinical veterinary students and performs clinical research. Working on the front lines of the hospital Dr. Sharp understands the importance of the good communication with pet owners and the challenges that veterinarians face as they help pet owners through the grieving process. - Dr. John Byrnes := Dr. Byrnes is a Research Assistant Professor in the Department of Biomedical Sciences. He is a neuroscientist with research interests relating to the brain mechanisms of psychiatric disorders and the neuropharmacology of psychotropic drugs. In addition to research, he is also a clinician in outpatient practice where he provides counseling, neuropsychological assessment, and cognitive rehabilitation to patients with brain injury and other neurological diseases. Dr. Byrnes holds a PhD in Neuroscience and MA in Counseling Psychology.

132046	Tufts Puppy Socialization Class
Subject: VET	Catalog Nbr: 1116
Tufts offers puppy socialization classes for pups that are 4 months old or younger. Class is held in the 800	

Course Bulletin

Conference Room in the Large Animal Hospital on most Tuesday and Thursday evenings from 6:30pm - 7:30pm. Students help with setting up and breaking down the room, handling puppies, performing a mock vet exam, obedience training (if experienced), managing puppy play time, writing individualized reports on each puppy's class progress and writing a short research paper about the role of socialization in the development of fearful behavior.

132061	Veterinary Informatics
Subject: VET	Catalog Nbr: 1117
The Veterinary Informatics Selective/Elective is an intensive study of topics related to information and computers in veterinary practice. The broad topics covered include: # Assessment of basic computer skills# General internet information# Searching for and evaluating internet veterinary resources# Access and evaluation of veterinary literature# Evaluation of veterinary practice management software# Use of computer technology and software# Internet communication and collaboration# Continuing Education# Web site design and authoringThe selective is designed to help prepare students to utilize technology in their careers to increase the quality of patient care, provide ongoing access to educational information (life-long learning) and to promote information literacy skills.	

132076	Practical Pharmacology
Subject: VET	Catalog Nbr: 1118
Three half-semester (1 afternoon/week) offerings.	

132077	LA Medicine & Surgery II
Subject: VET	Catalog Nbr: 308
Large animal medicine and surgery are taught together to facilitate the learning of the problems and treatments of large animal species. Diseases are discussed by systems within the species affected. The approximate proportion of lectures per species is as follows: equine - 35%, bovine - 35%, small ruminants and llamas - 15% and swine - 10%. Medicine lectures utilize a problem-oriented approach using case examples for diseases. The surgical lectures provide students with guidance on the didactic aspects of surgical diseases of large animals. The course is team taught by the large animal hospital and ambulatory faculty. It is supplemented by guest lecturers who present information on beef and swine production, viewed from the perspective of the animal industry. The course builds on previous courses in the basic sciences on pathophysiology and clinical pathology. Recommended text for the medicine portion of the courses is Large Animal Internal Medicine, Edited by Brad Smith, 4rd edition. Sports medicine lectures can be augmented with the reference: Diagnosis and Management of Lameness in the Horse edited by MW Ross and SJ Dyson (2003). The text , 4th ed, edited by Auer and Stick is the recommended reference for the equine surgical portion of the courses.	

Course Bulletin

132091	Harvard School of Public Health
Subject: VET	Catalog Nbr: 1119
Research in emerging arthropod-borne infections. We complement field based work (epidemiology and ecology) in coastal New England sites with laboratory methods to determine the public health burden of Lyme disease, babesiosis, ehrlichiosis and arboviral encephalitis. Opportunities for field work; or projects involving data analysis, microscopy, histopathology, immunology and molecular biology. Department of Tropical Public Health 665 Huntington Avenue, Boston, MA 02115 Telephone: 5088874236	

132105	MA Department of Food and Agriculture
Subject: VET	Catalog Nbr: 1120
Provides learning opportunity with State Rabies Coordinator (rabies exposure handling-risk assessment, legal protocols); Veterinary Health Officers and Animal and Poultry Inspectors,(state-federal programs for eradication of disease, disease investigation, general inspections of pet stores and auctions); Bureau Chief (review laws and regulations of Commonwealth and gain incite into: how violations handled, the interplay between various agencies and public interests, and development of management skills). Bureau of Animal Health 100 Cambridge Street, Boston, MA 02202 Telephone: 6176261794	

132121	Massachusetts Veterinary Medical Association
Subject: VET	Catalog Nbr: 1121
The Massachusetts Veterinary Medical Association offers a 1 credit (80 hour) selective, up to 6 hours per week with the state veterinary association to address its various fields of endeavor. In most cases, students will fulfill the hour requirements at the MVMA office in Marlboro. Some of the requisite time may be spent out of the office conducting research on pertinent topics that may affect one of more of the association's standing committees. Activities may include public relations, legislative controversies, medical waste control, drug regulations, international affairs, licensing and other state board matters and any other issues affecting veterinary practitioners in the Commonwealth that may arise during the selective. This is an excellent opportunity for students to familiarize themselves with some of the many topics affecting veterinary medicine today and the role that organized veterinary medicine plays in the resolution of these issues. Interested students must call to make arrangements. Office hours are Monday through Friday, 9am to 3pm. Massachusetts Veterinary Medical Association 169 Lakeside Avenue, Marlboro, MA 01752 Telephone: 5084609333	

132136	USDA Veterinary Services

Course Bulletin

Subject:	Catalog Nbr:
VET	1122
Broad exposure to field services and epidemiologic studies related to domestic animal species. Requires completion of Workers' Compensation form three weeks in advance of start date. See Nancy Horniak, (508) 887-4772, x84772, for form. USDA Veterinary Services 160 Worcester Providence Road, Sutton, MA 01590 Telephone: 5083632290	

132150	Farm Sanctuary - CA
Subject:	Catalog Nbr:
VET	1123
Summer selective option, 0.5 credit only. Farm Sanctuary is a non-profit farm animal protection organization. All interns are responsible for a specific job for 40 hours/week, shelter emergencies as needed, special educational opportunities. Minimum commitment is one month. Farm Sanctuary - CA PO Box 1065, Oakland, CA 95963 Telephone: 9168654617	

132164	Teaching Veterinary Gross Anatomy
Subject:	Catalog Nbr:
VET	1124
Second and third students only. Each selective student will be assigned a group of first year students to mentor. Students will meet at a mutually convenient time in the anatomy lab to review and teach anatomy to the first year students. In addition, selective students will prepare mock practical exams for the first year students, so that they can become acquainted with the practical exam format. This selective is designed to benefit first year students as well as to provide an opportunity for second and third year students to review anatomy. The review sessions will be supervised by Dr. Mann to assure quality. The number of credits assigned will depend upon the amount of time and effort each student contributes.	

132181	Farm Sanctuary - NY
Subject:	Catalog Nbr:
VET	1125
Summer selective option, 0.5 credit only. Farm Sanctuary is a non-profit farm animal protection organization. All interns are responsible for a specific job for 40 hours/week, shelter emergencies as needed, special educational opportunities. Minimum commitment is one month. Farm Sanctuary - NY PO Box 150, Watkins Glen, NY 14891 Telephone: 6075832225	

Course Bulletin

132183	SA Medicine & Surgery II
Subject: VET	Catalog Nbr: 311
This course is intended to develop skills in clinical reasoning and reinforce common small animal disease presentations, laboratory findings, and treatments. It provides an opportunity for the student to integrate knowledge obtained in prior courses to evaluate a clinical problem. Depending upon the specific problem, the student will evaluate historical, physical, laboratory and radiological data to formulate a diagnostic and treatment plan. For common surgical problems, discussion will emphasize diagnostics, surgical options, indications for specific procedures, post-operative care and possible complications. Prognostic factors for both medical and surgical problems will be discussed. Prerequisite: Completion of Small Animal Medicine & Surgery I or with permission from the course director	

132197	Foster Parrots Adoption Ltd.
Subject: VET	Catalog Nbr: 1126
A nonprofit parrot rescue and a public charity dedicated to serving unwanted or neglected parrots. Foster Parrots Adoption Ltd. PO Box 650, Rockland, MA 02370 Telephone: 5085770111	

132213	Merrimack River Feline Rescue Shelter Medicine Student Learning Opportunities
Subject: VET	Catalog Nbr: 1127
Second and third year students to assist in daily operations of our high volume, low cost, mobile feline spay/neuter clinic under the supervision of Dr. Deborah Brady. Our SpayMass van can spay/neuter up to 40 cats a day. This is a low cost spay/neuter clinic providing vaccinations, microchipping, flea and deworming treatments, as well as spay/neuter services for cats.h5. Student Objectives* Learning anesthesia protocols and assisting in anesthesia administration and monitoring* Learning and practicing preoperative prep of felines, including intubation* Learning vaccine protocol and practicing administration* Learning about feral cat TNR practices (trapping, ear tipping and WUOU)* Observing and learning spay/neuter surgery techniques (when appropriate)h5. ScheduleTimes and Locations are flexible. Appropriate days for students would be days when the clinic is at the following locations:- Mondays := Lowell Humane Society in Lowell, MA- Wednesdays := MSPCA at Nevins Farm in Methuen, MA- Fridays := Merrimack River Feline Rescue in Salisbury, MAOn Fridays when we are at the shelter additional learning opportunities would include feline dental procedures, as well as shelter veterinary rounds. We would like to have students who are considering shelter medicine as a career choice, specifically students interested in high volume spay/neuter and TNR. Our clinics are run at a fast pace in a compact facility, we are looking for eager candidates who can go with the flow, and are willing to help out where ever needed. Merrimack River Feline Rescue Society 63 Elm St, Salisbury, MA 01952 Telephone: 9784620760	

Course Bulletin

132228	Policy Issues in Shelter Medicine
Subject: VET	Catalog Nbr: 1128
The shelter policy selective is an intensive course focusing on animal shelter policy. The format is readings, lectures and group discussion. Students may take part one for 0.5 credits or both parts of the selective for 1 credit. Masters students and certificate students must take both parts.h5. Part 1The first part of the course involves ten discussion sessions. The sessions will require some outside reading and will be a mix of didactic and discussion based presentations. Each session will focus on a different topic:* History of animal sheltering and what is an animal shelter* Shelters and the law, animal control in Massachusetts* Adoption Policy* Pet Relinquishment: reasons and preventative strategies* Stress assessment and temperament testing* Euthanasia Policy and decisions* Data collection and research design to support policy decisions* Pet overpopulation: where are we now?* Shelter Design* Integrated Family Medicine: Pets in the family and humane educationh5. Part 2Each student will choose a policy area of interest and prepare a 20 page paper summarizing the issue. The paper should focus on the latest updates in the area and must be referenced. The student is encouraged to include primary sources such as interviews or raw data to support their analysis. The class will meet as a group to discuss the findings and then the papers will be turned in to Dr. McCobb.	

132244	Worcester Animal Rescue League
Subject: VET	Catalog Nbr: 1129
Students taking this selective will have the opportunity to investigate the inner working of an urban shelter that does both private humane society work, and serves as an animal control facility for the city of Worcester and several surrounding communities.The benefit of this type of shelter is that is provides you with the opportunity to see the differences between animals that are owner relinquishments, and those that are picked up as strays by an animal control officer. Adoptions and the entire adoption process can also be observed. You may have the opportunity to see animals at the shelter that are part of an animal cruelty investigationParticipation in this selective will give you an opportunity to observe the flow of animals through the shelter, from adoption to intake processing, to behavioral evaluations of dogs, to life on the adoption floor, and finally to adoption. You will be allowed to participate in the medical care of the animal on intake (perform physical exams, and do routine lab work). Depending on when you are taking the selective, you may be able to assist veterinarians in the spaying and neutering of animals.This selective can either be taken during the semester (on Tuesday afternoons, or Wednesday mornings), or during the summer. Worcester Animal Rescue League 139 Holden St, Worcester, MA 01606 Telephone: 508 8874570 x84570	

132259	Creation of a Veterinary Microbiology Website
Subject: VET	Catalog Nbr: 1130
This one-credit pre-clinical selective is available for one first or second year veterinary student during the spring semester. Students who participate in this selective will assist with the development of a website devoted to veterinary microbiology. Activities include accumulating clinical information and development for	

Course Bulletin

interactive case exercises, collection and formatting of information on pathogens of veterinary interest, and website design and content input. Depending on which area students choose to focus on, students are expected to gain an in-depth understanding of the clinical and microbiological aspects of specific veterinary pathogens. Students will gain familiarity with veterinary hospital case records, learn the process of taking information from multiple sources and condensing it into a format suitable for the web, and/or learn web-design and content input.

132275	Enterohemorrhagic E. coli
Subject: VET	Catalog Nbr: 1131
The pathogen enterohemorrhagic E. coli (EHEC) is considered one to the emerging pathogens of the developed world. In recent years outbreaks associated with eating hamburgers from fast food restaurants have been well publicized in the media. In young children and the elderly infection with the organism can lead to kidney failure and death. In a percentage of cattle, the organism can be found in fecal samples. The main source of human infection is from contaminated hamburger meat. The contamination occurs at the slaughter house during the processing of cattle carrying the organism. My laboratory is interested in understanding the human pathogenesis of this organism. We are currently generating virulence factor knock out mutations in the wild-type organism and studying the virulence of such mutants. We are also developing vaccine strains which will be used on cattle to prevent the colonization of EHEC strains. The student should have an interest in learning techniques in molecular biology and microbiology. Best available time, fall, spring and summer semesters.	

132288	Genes and Behavior: What Animals can Tell us about Autism?
Subject: VET	Catalog Nbr: 1132
The goal of this selective is to expose students to the current understanding of how animal behaviors are influenced by genetic makeup and environment, and techniques one can apply to analyze the causes of abnormal behaviors and to develop effective intervention programs. A strong emphasis is given to testing social behaviors in animals and determining how an animal's experience affects its chromatin structure and gene activity. Students are expected to: # Gain a good understanding of how genetic variations and experience affect brain development and behaviors # Learn laboratory procedures of gene activation analysis and mouse social behavior assessment # Learn how to present scientific findings and how to search for literature. This selective is offered yearly to first and second year students (Fall and Spring). It consists of weekly Journal Club-style discussions and hands-on laboratory research project. Grades will be determined by discussion (30%), oral presentation of an assigned paper (20%), and final report of lab project (50%).	

132303	Gonadal Function
Subject: VET	Catalog Nbr: 1133
Central integrative processes controlling gonadal function: role of peptidergic neurons, with emphasis on the endogenous opioid system. Prerequisite: organic chemistry, molecular biology, neuroscience. Best available time, Summer semester.	

Course Bulletin

132317	Infectious Diseases - Cryptosporidium Parvum
Subject: VET	Catalog Nbr: 1134
Molecular biology of Cryptosporidium parvum. Prerequisite: Some lab experience; palpating, calculation of molarities and concentrations, use of pH meter, low-speed centrifuge or similar equipment. Best available time, Fall semester.	

132328	Ophthalmology
Subject: VET	Catalog Nbr: 318
This is a comprehensive, clinically-oriented course presented on an anatomic basis. The foundation for the course was provided in previous lectures on ocular anatomy, embryology and histology. The course assumes students feel confident with, and have reviewed, the previously taught material. Representative diseases in major species are presented with emphasis on clinical presentations, pathophysiology and disease mechanisms, differential diagnosis and treatment. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132331	Issues in Wildlife Policy
Subject: VET	Catalog Nbr: 1135
Through a combination of readings, lectures, and discussions, students will be introduced to policy making, and the roles played in policy making by veterinarians, scientists, and other technical professionals. The powers of state, federal, and local governments to regulate treatment of wildlife will be described, along with the government mechanisms in place to implement policies relevant to wildlife. Each student will then pursue an independent literature review on policy relevant to a topic of interest, including but not limited to wildlife conflict resolution, wildlife trade, wildlife conservation, control of wildlife diseases, and environmental impacts on wildlife. Each student will prepare her literature review as a written paper (approximately 10 pages) and present her analysis orally to classmates and the course director. Learning is assessed through a short take-home essay exam (20%), a literature review (40%), class participation in discussions (30%), and an oral presentation (10%). Readings will consist of journal articles, book chapters, and mass media publications that illustrate how the views of different stakeholders are incorporated into wildlife policy. Core readings will be assigned to all students at the beginning of the semester; each student then will be assigned or locate specific readings according to her field of interest. The syllabus, core readings, and other materials will be made available on TUSK, or copies provided in the library of the Center for Animals and Public Policy.	

132346	Infectious Diseases - GI
Subject: VET	Catalog Nbr: 1136

Course Bulletin

Research in infectious disease with particular reference to infections of the GI tract in animals and man. Best available time, Fall and Spring semester.

132360	Massachusetts Eye and Ear Infirmary
Subject: VET	Catalog Nbr: 1137
Cochlear implants are devices implanted in the inner ears of profoundly deaf people to stimulate the auditory nerve electrically and thereby provide them some measure of hearing. This laboratory uses rats to address questions about fundamental aspects of such stimulation that for technical or ethical reasons cannot be addressed in humans. Anatomical, electrophysiological and behavioral methods are all employed to study the effects of stimulation through permanently implanted intracochlear electrodes. Suitable projects for students are not always available, but inquiries are welcome at any time. Massachusetts Eye and Ear Infirmary 243 Charles St, Boston, MA 02114 Telephone: 6175733864	

132369	L.A. Clinical Anatomy
Subject: VET	Catalog Nbr: 319

132375	Orthopedic Research
Subject: VET	Catalog Nbr: 1138
Would you like to learn how new orthopaedic medical devices and drugs are developed and approved for use? Would you like to actively participate in the process? If the answer is yes, Dr. Kirker-Head invites you to join him in an Orthopedic Research Selective built around one or more of the several orthopaedic studies he has ongoing within the Orthopedic Research Laboratory here on campus. Students will be expected to actively participate in one or more of the following: the handling and examination of research animals (sheep and/or horses), induction and maintenance of anesthesia, sterile preparation, surgical procedures, post-surgical care, drug administration, record keeping and a variety of imaging procedures including radiography, fluoroscopy, helical computed tomography, and dual energy x-ray absorptiometry. If this sounds overwhelming - don't panic - others have gone before you. On the job training will be received from Dr. Kirker-Head and colleagues in radiology and anesthesiology where appropriate. Back-ground reading and discussion opportunities will be offered. Genuine enthusiasm is a must.	

132388	Research in Veterinary Medicine - Project Preparation and Implementation
Subject: VET	Catalog Nbr: 1139
The half-credit offering is one afternoon per week. This selective is recommended for students who would like	

Course Bulletin

to participate in ongoing research projects either on or off campus. It is also strongly recommended for students doing summer research projects (NIH and Army funded for example) and students in the International Veterinary Medicine Postgraduate Program. In the late fall, the students will receive help and encouragement in research project identification and support in proposal writing. In the spring, the students will continue to develop skills in research methods, scientific writing, statistical methods, critical evaluation of scientific literature, and preparing for their proposed summer research. In addition, this selective will prepare the student for international research by providing a pre-departure briefing and a re-entry seminar.

132402	Respiratory Medicine
Subject: VET	Catalog Nbr: 1140
To gain first-hand experience in the design and implementation of a novel research project in the field of respiratory medicine. Student will be involved in literature review, experimental design, animal handling, research procedures, collaboration efforts, client communication, data analysis and write up. Monthly meetings with Respiratory Disease Investigation Group (RDIG) will broaden the exposure of selective student to other projects.	

132417	Self-Styled Pre-Clinical Selective in the Bug Lab
Subject: VET	Catalog Nbr: 1141
Self-styled Pre-Clinical Selectives are available to first or second year veterinary students during the Spring semester. Although Spring semester is preferred, depending on the project and level of student expertise, it may be possible to accommodate students during Fall semester-please consult instructor. Depending on which semester and what year Selective should be project oriented and are expected to utilize the space and equipment available in our research laboratory. Students are welcome to suggest their own projects, participate in on-going research projects, or undertake a suggested project. Participation in this selective requires that students consult the instructor during the previous semester to ensure development of a suitable project. Students are expected to learn how to efficiently obtain and read scientific literature, develop a research project, design controlled experiments, and learn basic laboratory techniques, which depending on the specific project undertaken, may include but not be limited to, ELISAs, SDS-PAGE, Western blots, basic microbiological and or tissue culture techniques.	

132425	Small Animal Clinical Procedures Lab
Subject: VET	Catalog Nbr: 321
This course provides an introduction to a wide variety of procedures commonly used in small animal medicine and an opportunity to practice techniques on donated dog and cat cadavers. Check lists are utilized to guide students in performing basic dental procedures, otoscopic examination, fine needle aspiration and punch biopsies, nasogastric/esophageal tube placement, thoracocentesis, trans-tracheal wash technique and chest tube placement. This laboratory is a prelude to evaluation of the student's skills in performing medical procedures in their fourth (clinical) year.	

Course Bulletin

Prerequisite: Completion of Year 2 courses or with permission from the course director

132431	The Angiogenesis Foundation
Subject: VET	Catalog Nbr: 1142
The Angiogenesis Foundation, a non-profit institution based in Cambridge, MA, is offering a selective to students interested in helping to develop internet-based educational programming on animal health. The Foundation is currently seeking three selective students to help create and implement a new portion of the Foundation's web site dedicated to animal health. Students will help write, edit and graphically present educational content about common diseases in dogs and horses and the role of new angiogenesis medicines in treating these conditions. This selective is a great opportunity for students to explore the use of multimedia in educating the public about veterinary medicine and an opportunity to learn about a premiere area of medical research - angiogenesis. No previous web training required. This selective is offered for fall, spring, summer of over school breaks. The Foundation's office is open Monday through Friday from 8:00am to 7:00pm (or later as required) and the staff is flexible in working with student's schedules. More information about the organization can be found on the Foundation's website: http://www.angio.org/. Interested students must contact the organization before signing up for the selective. The Angiogenesis Foundation One Broadway Street, 14th Floor Suite 200, Cambridge, MA 02138 Telephone: 6175765708	

132445	Medical Topics in Shelter Medicine
Subject: VET	Catalog Nbr: 1143
The shelter medicine selective course is an intensive course focusing on applied small animal medicine in the shelter setting. The format is readings, lectures and group discussion. Parts of the course will be integrated with the shelter policy selective. The course will involve ten course sessions as well as some out of class preparation time. Possible Course Topics: * Shelter Medicine 101: Overview and opportunities in shelter medicine* Concepts of Herd Health and epidemiology in shelters* Feline URI/Other infectious disease* Emergency care and triage in a shelter setting* Diagnostics and pathology in the shelter* Vaccination in shelters and foster homes* Sanitations standards in shelter settings* Transport issues and health* Zoonotic disease concerns/immunocompromised humans* Public health regulations and reportable disease	

132453	Standardized Client Interviews
Subject: VET	Catalog Nbr: 322
Successful communication between veterinarian and client is essential for an accurate diagnosis, improving clinical outcomes, practice success, mutual satisfaction, and decreasing malpractice risk. This course is designed to teach the student specific procedures and skills used to communicate successfully with the client, i.e., elicit and understand the client's perspective, and acquire a useful medical history. A lecture and demonstration on the conduct of a good client interview emphasizes both content and behavior. Specific techniques to engage, empathize with, educate and enlist the client are discussed. The lecture is followed by	

Course Bulletin

two opportunities for each student to have a simulated client interview, in which the “client” is a trained health care professional who follows the interview session with a personalized critique of student performance and specific suggestions for improvement.

132459	TCSVM Anesthesia-Small Animal
Subject: VET	Catalog Nbr: 1144
Involvement with large/small animal anesthesia case-load.	

132472	Animal Behavior
Subject: VET	Catalog Nbr: 1145

132483	Introduction to Small Animal Anesthesia and Surgery Techniques
Subject: VET	Catalog Nbr: 323
This course provides an introduction to basic surgical and anesthetic techniques. During the year, each student performs an ovariohysterectomy on two dogs and anesthetizes two additional dogs for ovariohysterectomy. Students are also responsible for pre- and postoperative care of their patients. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132487	Critical Care
Subject: VET	Catalog Nbr: 1146
Involvement with small animal emergency receiving and small animal ICU patients.	

132503	Facilitating the Placement of Found Animals in the Foster Hospital for Small Animals
Subject: VET	Catalog Nbr: 1147
Stray animals are often found by individuals and brought to the FHSA. These animals often need some degree of medical treatment but are treatable and healthy enough to be adopted as pets. The care and placement of these animals is overseen by Dr. Mary Labato and a few of the ward technicians. This job entails duties and the swift and successful placement of these animals which could be expedited by the aid and input of a few student volunteers. This selective includes:# Calling surrounding veterinary clinics and shelters to try and locate the animal's owner# Filling out a medical history and behavior sheet and student contacts for adoption information# Communicating with technicians and covering veterinarian concerning the animals medical needs and time allowed in the hospital# Spending time with these animals: walks, treats and	

Course Bulletin

observationOther selective goals include:# Creating a list of surrounding veterinary clinics and shelters with phone numbers to simplify the process of locating animal owners# Creating a waiting list of willing foster homes for animals who can no longer stay in the hospital but have not yet been adopted# Organizing bake sales and other events to raise money for the Travis Fund (a Tufts Account which donated money is used to pay for the medical needs for these potentially healthy animals)

132509	Bovine Procedures Lab
Subject: VET	Catalog Nbr: 324
The objective of this course is to provide third-year veterinary students the opportunity to perform techniques commonly used in the practice of bovine medicine on live animals. Laboratories consist of separate sessions covering general medical procedures, theriogenology, obstetrics and anesthesia. General medical procedures include instruction on history taking and physical examinations, restraint and handling and techniques used in diagnosis and treatment of bovine diseases. The theriogenology session covers the technique of rectal palpation of the reproductive tract. The obstetrics session covers the fundamental principles of bovine obstetrics including mutation and fetotomy using fetal cadavers in a phantom uterus. Small groups of students are assigned a cow, and are responsible for the well-being and medical records of that animal for the duration of the course. Time is scheduled for students to practice the learned techniques with supervised instruction. At the end of the course, the student should be able to demonstrate each of the procedures or techniques covered. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132517	ICU Treatment Crew
Subject: VET	Catalog Nbr: 1148
Treatments, monitoring and animal handling in FHSA-ICU. Second and third year students only.	

132533	TCSVM Neurology
Subject: VET	Catalog Nbr: 1149
Second year students only. This selective will be offered one hour per week in a classroom to discuss a hospitalized case. It is a clinical selective that exposes students to one neurology case per week. History, neurological exam, differential diagnoses, diagnostic tests, and management are discussed as they relate to that patient.	

132537	Clinical Dermatology
Subject: VET	Catalog Nbr: 325
The course is focused on the pathogenesis, clinical phenotype, diagnosis and treatment of most relevant skin	

Course Bulletin

diseases and approach to main dermatological problems of domestic animals (mainly dog, cat, but also horse, and farm animals, the latter with a specific lecture). We also have included a lecture regarding the approach to dermatologic patient in general practice as this is a common professional path and might be different in diseases that are commonly seen. A considerably part of the course will be devoted to the practical application of evidence-based-medicine to the dermatologic cases.

Dermatologic problems are very common in practice and readily visible to owners. Any veterinarian has to be well prepared to manage skin conditions in animals: from their prevention (if applicable) to their diagnosis and treatment. But aside from this fact, dermatology is an exciting and rapidly evolving specialty, in which your integrated knowledge of internal medicine, microbiology, parasitology, pathology, immunology will be tested and utilized. Another unique feature of dermatology is only specialty in which you can see the organ with naked eye. The faculty of the course really hope to be able to infect the students with the fascination, passion, and enthusiasm that they feel for this discipline, and sincerely hope that they will enjoy this course.

The “Clinical Dermatology” course will be delivered mostly at lecture halls except on site cytology and histopathology wet labs and will use different methodologies to reach the course objectives. Mainly:

1. Discussion of clinical cases selected to illustrate some of the most common dermatologic clinical presentations/problems in dermatology.
2. Lectures (synchronous) to provide basic information on the most common skin diseases and to discuss the clinical cases.
3. Self-learning online, solving dermatologic quizzes (asynchronous).
4. Wet lab sessions aimed to facilitate the understanding of structure/function of the skin, the interpretation of cytologic specimens and to understand the clinic-pathologic correlation.
5. Online tutoring.

Prerequisite: Completion of Year 2 courses or with permission from the course director

132547	Oncology (Chemotherapy)
Subject: VET	Catalog Nbr: 1150
First and second year students only. This selective is a full hands on selective. Students will learn the basics of making up and administration of chemotherapeutic drugs, catheter placement, and blood collection. The selective will emphasize safety and knowledge of the drugs used in oncology, and strengthens their technical skills as well.	

132553	Zoological Medicine
Subject: VET	Catalog Nbr: 326
This course presents medical and surgical topics in the treatment of non-domestic species, including wildlife, zoo animals, laboratory animals, birds (including poultry) and exotic companion animals. The course systematically covers captive and free-ranging disease issues of the major taxonomic groups from invertebrates to primates. Emphasis is placed on the comparative aspect of diagnosis and treatment of these species, especially with consideration to related domestic animals.	

Course Bulletin

Prerequisite: Completion Intro to Zoo Med or with permission from the course director

132561	TCSVM Radiology
Subject: VET	Catalog Nbr: 1151
Diagnostic Imaging experience. Second or third year students only.	

132576	Paws for People (Animal Facilitated Activities)
Subject: VET	Catalog Nbr: 1152
Classes are taught by Delta instructors on becoming a registered visitor; what the animal handler needs to know, following this class students will be eligible to apply to the Delta Society for registration as a trained visitor. There is a \$80 fee for students to take this Delta Course. This includes a book and paying the lecturers. However, the course director has agreed to waive the 80 fee if students are willing to use a borrowed workbook from Paws for People, rather than purchase their own book. There is also a fee payable to the Delta Society if the student chooses to become registered with them. Registration is voluntary and not required as part of the selective. After completing the training the student will help perform evaluations of volunteers and their dogs. The student will spend two days assisting with evaluations and will also observe two visits for a total of 20 hours. The last eight hours of the selective will consist of visitation by the student and a short (20 minutes only) presentation to the Tufts Paws for People Advisory Board summarizing their experiences.	

132582	Veterinary Economics and Practice Management
Subject: VET	Catalog Nbr: 327
This course is designed to acquaint veterinary students with business and economic issues involved in the practice of veterinary medicine. Particular attention is placed on the veterinary service model, practice management, client communications, marketing, veterinary fees, and the role of staff. In the second half of the course the emphasis will shift to topics related to practice management. A series of guest lecturers will expose students to real life business and management concepts as they relate to small animal practice, equine practice, and ambulatory practice. A project will be assigned to allow students to pursue learning in additional topics related to veterinary practice management, and a take home examination will be delivered at the end of the course. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132590	TCSVM Small Animal Medicine
Subject: VET	Catalog Nbr: 1153
Can take up to six students (morning or afternoon) during the summer semester and three students during	

Course Bulletin

the fall and spring Semester.

132596	Euthanasia Seminar
Subject: VET	Catalog Nbr: 328
This course is organized and moderated by faculty from the Tufts Center for Animal and Public Policy. It is delivered in a seminar format mixing didactic lectures, panel presentations and class discussion. Topics covered include: ethical issues around euthanasia, appropriate drugs and non-pharmacological methods of euthanasia, appropriate euthanasia protocols and techniques for specific species (companion animals, equine, bovine, wildlife, and exotics are highlighted) as well as regulations. Euthanasia in specific settings, for example small and large animal practice, laboratory medicine, animal shelters, zoos and disasters will be discussed. The seminar includes participation from practicing veterinarians, as well as some training on client communications. There are also opportunities for students to ask questions and discuss concerns with presenters. The goal of the course is to familiarize students with the ethical, logistical and emotional aspects of animal euthanasia as well as to prepare them to observe and participate in euthanasia during their upcoming clinical year. An optional wet lab is available for students as well. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132607	TCSVM Small Animal Surgery
Subject: VET	Catalog Nbr: 1154
Involvement in clinics of along with small animal surgery staff, faculty and fourth year students.	

132608	Ethics and Veterinary Medicine
Subject: VET	Catalog Nbr: 329
This course acquaints students with ethical issues in various aspects of veterinary medicine through short faculty presentations and reading assignments. Students then analyze and discuss these current ethical issues in small groups. The course emphasizes the process of problem solving in addressing ethical issues and encourages thoughtful and respectful debate.	

132621	TCSVM Small Animal Wards
Subject: VET	Catalog Nbr: 1155
Treatments and animal handling involving small animal inpatients. Three half-semester one afternoon per week offering.	

Course Bulletin

132635	Hands-on Biostatistics
Subject: VET	Catalog Nbr: 1156
Offered to second year students. This selective is designed to be both an adjunct to VET 216 (Epidemiology and Biostatistics) and a continuation. Statistics will be learned using an active approach, emphasizing practical applications of the concepts learned in VET 216. Students will gain experience in analysing data sets and presenting data. In addition, students will become familiar with using Excel for basic statistical analyses and SPSS for more advanced statistics. Laptop computers are required.	

132636	Clinical Animal Behavior
Subject: VET	Catalog Nbr: 341
The course focuses on the diagnosis and treatment of common behavior problems in dogs and cats in a general practice context. Optional lectures are added for people interested in equine, psittacine and backyard chicken behavior. Problems addressed include aggression, fears and phobias, compulsive disorders, cognitive dysfunction and medical problems with behavioral clinical signs. Lectures cover history collection, observation of clinical signs, management and safety, behavior modification, and psychopharmacology. The ultimate goal of this course is to provide students with the tools to help animals that may have unnecessarily been surrendered or euthanized, and to continue building strong human-animal bonds. Prerequisite: Completion of Year 2 courses or with permission from the course director	

132648	VCA Abbott Animal Hospital
Subject: VET	Catalog Nbr: 1157
Abbott Animal Hospital 21 East Mountain Street, Worcester, MA 01606 Telephone: 5088533350	

132661	Acton Animal Emergency Care
Subject: VET	Catalog Nbr: 1158
Acton Animal Emergency Care 164 Great Road, Acton, MA 01720 Telephone: 9782631742	

132675	Adams Animal Hospital

Course Bulletin

Subject:	Catalog Nbr:
VET	1159
All facets of small animal clinic practice including medicine and surgery. Dog, cat and ferret only. Adams Animal Hospital 1287 South Main Street, Athol, MA 01331 Telephone: 9782497967	

132689	Agape Animal Hospital
Subject:	Catalog Nbr:
VET	1160
Agape Animal Hospital 114 Providence Road, Whitinsville, MA 01640 Telephone: 5082346815	

132703	Angell Animal Medical Center
Subject:	Catalog Nbr:
VET	1161
Angell Animal Medical Center 350 South Huntington Avenue, Boston, MA 02130 Telephone: 6175227282	

132714	Sunday Feral Cat Clinics
Subject:	Catalog Nbr:
VET	1162
Opportunity to practice technical skills and procedures such as vaccinations, SQ fluid administration, etc. In addition, students will observe surgeries and feral cat clinic procedures. As a volunteer, students will be helping serve an animal population in need and support the shelter medicine program.	

132728	Angell Animal Medical Center - Emergency Medicine and Critical Care
Subject:	Catalog Nbr:
VET	1163
Speciality is Small animal emergency medicine and critical care. Rotating schedule, therefore call to schedule. Angell Animal Medical Center 350 South Huntington Avenue, Boston, MA 02130 Telephone: 6175227282	

132743	Angell Animal Medical Center - Exotics

Course Bulletin

132875	Montgomery Zoo
Subject: VET	Catalog Nbr: 4002
Assist zoo veterinarian with treatments, immobilization's, necropsies and preventive medicine program. Acquire experience in zoo animal husbandry and nutrition by rotation through various departments. Completion of a project and written report is required. Duration of Externship: 3-6 weeks Research, Allied Institutions: Large Animal Depts. Of Auburn University of Vet Medicine and Tuskegee University School of Vet Medicine. Resume, Cover Letter, References 2301 Coliseum Pkwy, Montgomery, AL 36110 Telephone: (334) 240-4900	

132885	C.R.O.W.
Subject: VET	Catalog Nbr: 4003
C.R.O.W., Care and Rehabilitation of Wildlife, is a non-profit organization dedicated to the rehabilitation and release back to the wild of injured, ill and orphaned native wildlife. Established on Sanibel Island in 1968 C.R.O.W. provides restorative care to more than 100 difference species of wildlife each year. "Patients" come from all over southwest Florida and occasionally from out of state. More than 600 patients are received annually. Assist staff veterinarian in diagnosis, treatment, surgery, necropsies, laboratory procedures, nutrition, and research. Assist staff rehabilitators in daily and outside routines, raising of orphans, public programs, rescues and releases. Duration: 4-12 weeks Will Provide: Housing Externship application/Statement of interest/CV/2 letters of recommendation 3883 Sanibel-Captiva Road/P.O. Box 150, Sanibel Island, FL 33957 Telephone: (239) 472-3644 Fax: (239) 472-8544	

132892	Animal & Bird Hospital
Subject: VET	Catalog Nbr: 4004
Focus: 70% Avian (400 Birds/Month), 10% Exotics Stipend/Housing available 3195 Hamner Ave, Norco, CA 92860 Telephone: (909) 371-7120	

Course Bulletin

132900	Avian & Exotic Animal Hospital of L.A. County
Subject: VET	Catalog Nbr: 4005
50-55% Dog/Cat & 45-50% Companion Exotic Animal The hospital and our specialty practice in Orange County (90% companion exotic pets) have a recognized expertise in dealing with companion exotic pets. We request that prospective preceptors write us and request dates for externships. 4871 W Rosecrans Ave, Hawthorne, CA 90250 Telephone: (310) 679-0693	

132908	Avian and Exotic Animal Hospital
Subject: VET	Catalog Nbr: 4006
5000 patients annually: 55% avian, 20% rabbit and rodents, 10% ferrets, 10% reptiles, 5% other (fish, primates, amphibians, wildlife). There is exposure to birds, reptiles, small rodents and companion exotic animals. There is exposure to a wide variety of areas of medicine in this field, including consulting for aviculturists, pharmaceutical companies, industrial breeders of rabbits and the pet trade. The bulk of the practice consists of vigorous medical and surgical clinical cases. We offer the very best medical and surgical services for birds, exhibit and companion exotic pets including reptiles, amphibians, fish, rabbits, rodents, ferrets and non-domestic mammals. The practice is limited enabling us to focus on these animals unique needs. The externship program aims to expose students to exotic patients commonly and rarely seen in a private practice situation, which greatly differs from a university setting. Students are encouraged to interact with clientele, to observe and assist the staff as needed and to participate in the private practice environ. The Avian and Exotic Animal Hospital shares a facility with the VCA Emergency Animal Hospital (EAC) and Referral Center, providing potential consultation with veterinarians boarded in internal medicine, cardiology, surgery, neurology, emergency medicine, radiology and ophthalmology. Together with the EAC our hospital offers a full spectrum of in-house diagnostics including white blood counts, chemistry profiles, aerobic cultures and sensitivities, fecal examination, radiology, endoscopy and laparoscopy and ultrasonography. Duration: 4 week blocks Low cost housing available. Please contact by phone or mail. Short letter with dates that you are available, your career objectives and a personal reference knowledgeable of your interest and experience in birds or exotics. 2317 Hotel Cir S Suite C, San Diego, CA 92108 Telephone: (619) 260-1412 Fax: (619) 260-1499	

132916	B.I.R.D. Clinic

133019	Diagnostic Ultrasonography
Subject:	Catalog Nbr:
VET	395
This course covers the most common clinical applications of diagnostic ultrasonography in assessing different body cavities/parts in small and large animals. The course includes 11 didactic hours dedicated to small animal applications, 6 hours of large animal applications, 4 hours of supervised hands-on laboratories 4 hours of clinical cases review, and 2 hours of final exam. Elective Large Animal labs are also offered. Each lecture uses a series of well-illustrated clinical cases to outline the place of ultrasonography in diagnosing common disorders. The lectures are made of 5-15 minutes modules that include narrated and annotated video clips. Each module has supportive questions that are discussed in interactive sessions. A companion website "Learning Ultrasonography" is the home base resource for the Small Animal portion of the course. Prerequisite: Completion of Year 2 courses or with permission from the course director

General zoo animals; preventative medicine, surgery, pathology. Clinical rounds, hospital patients, necropsy, record keeping. Duration: 6-8 Weeks Will Provide: \$100.00 per week when available. 4th year only, CV, Cover letter; include proof of health insurance, 1 page essay on "Why you want to be a preceptee at the Denver Zoo". 2300 Steele Street, Denver, CO 80205 Telephone: (303) 331-5792	

133047	Small Animal Medicine Rotation
Subject:	Catalog Nbr:
VET	401
Each student is assigned to one service in internal medicine every week. Students see and follow cases assigned to them and are involved in decision-making, in diagnostic procedures and treatment. Students are responsible for daily evaluation and treatment of their patients, and client communication as directed by the clinician. Daily discussion rounds enable students and faculty to share knowledge and discuss cases. Some weekend coverage will be assigned. Prerequisite: Completion of the Preclinical Curriculum	

133050	Beardsley Zoological Gardens
Subject:	Catalog Nbr:
VET	4023
General zoo animals. Assist veterinarian in duties; treat cases requiring care. Duration: 6 weeks to 6 months Reference: AAZV Guide Cover letter, CV 1875 Noble Avenue, Bridgeport, CT 06610 Telephone: (203) 394-6563	

133059	Kensington Bird and Animal Hospital
Subject:	Catalog Nbr:
VET	4024
Avian/exotic animal medicine. Kensington Bird and Animal Hospital is a full-service small animal veterinary hospital. We do most of our lab work in house, and perform all manner of avian/exotic procedures as well as canine/feline radiology, soft-tissue surgery, diagnostics, and treatments. Many of our avian/exotic cases are referral. Our avian caseload during 1994 averaged over 50 patients per week. We also see large numbers of exotics, including "pocket pets", reptiles, ferrets, etc. We do a large amount of wildlife medicine, radiology and surgery. 977 Farmington Ave, Berlin, CT 06037 Telephone: (860) 828-7736	

Course Bulletin

133060	Small Animal Surgery Rotation
Subject: VET	Catalog Nbr: 402
Students are assigned to a staff surgeon and resident. They participate in the diagnostic work-up, surgical treatment and postoperative care of the patients on the service, based upon the caseload presented. They are expected to be familiar with all aspects of the cases under their care, and also those of the other student(s) on the service. All teaching is performed during case rounds and one-on-one at the operating table throughout the day. The students will be required to utilize their didactic background in assessing, then performing the surgical technique (via their assistance), and evaluating the postoperative course – including deductive reasoning along the way (to be able to think the case through to its conclusion). Although the students will not be performing the majority of the techniques they are exposed to, their exposure to these surgical cases will allow them to familiarize themselves with the available technique(s) and formulate a diagnostic approach to the patient, and provide appropriate information regarding treatment and prognosis. Two weeks is spent on two of three services: orthopedic, general surgery, and chief resident.	

133068	Mystic Aquarium
Subject: VET	Catalog Nbr: 4025
With the assistance of both external and in-house funding, the Department of Animal Health of Mystic Aquarium, a division of Sea Research Foundation, is sponsoring a one-year internship/research opportunity in aquatic animal medicine. Applicants for the internship should be graduates of an AVMA accredited veterinary college or ECFVG certified. Preference will be given to applicants with graduate degrees and/or postgraduate clinical experience in a practice or internship setting. Entry level familiarity with ultrasound, radiology, and endoscopy systems is expected. The stipend for the position is expected to be > \$26,000 per annum plus benefits. The successful applicant will assist the veterinary, research, and husbandry staffs in the diagnosis and treatment of medical cases from the Aquarium's extensive collection of invertebrates, fresh and saltwater fishes, reptiles, amphibians, penguins, seals, sea lions, and beluga whales. In addition the intern will participate in our rescue, rehabilitation, and release program for stranded marine mammals and sea turtles. Collateral opportunities at cooperating area academic, government, and private industry laboratories are possible and encouraged. The intern may have an opportunity to develop teaching skills by his/her involvement in the Aquarium's veterinary externship program and at informal seminars. The intern will be expected to pursue one or more clinical or research interests and to prepare the results for presentation to our staff and at an appropriate professional meeting as well as for publication in the peer reviewed literature. Past interns have gone on to acceptance into well-recognized graduate/residency programs or employment in the field of aquatic, comparative, or zoological medicine. Applicants should submit the following material to: DR. ALLISON D. TUTTLE STAFF VETERINARIAN MYSTIC AQUARIUM 55 COOGAN BLVD. MYSTIC, CT 06355 1. A current transcript from the veterinary school and any post baccalaureate program which he/she has attended. 2. Three letters of recommendation from individuals familiar with the applicant's academic performance and his/her potential in the clinical and research arenas. 3. A statement reflecting the applicant's goals in the area of aquatic animal medicine and research. 4. A current curriculum vitae or resume. Potential applicants who will be in the southern New England area are encouraged to contact us for a tour of our facilities and a chance to meet with our staff. All application	

Course Bulletin

materials must be received prior to 01 January 2008. The successful applicant will be chosen and notified by 10 Jan 2008 and must commit to the position within 72 hours. The internship period will extend ~ from 1 June 2008 through ~15 June 2009. With prior agreement by both parties an additional year in the program may be possible. Additional information may be obtained by calling Dr. Tuttle at 860-572-5955, or by e-mail at . A general orientation to our facility and programs can be obtained by viewing our web page <http://www.mysticaquarium.org>. Mystic Aquarium is an affirmative action/ equal opportunity employer.

The Zoological Medicine Service, Veterinary Medical Teaching Hospital, College of Veterinary Medicine,	

Course Bulletin

University of Florida offers a preceptorship in Zoological Medicine to veterinary students from other colleges of veterinary medicine. The preceptorship is a minimum of 2 weeks, with a 1 month average duration. The preceptorship offers students exposure to the medical assessment of a wide range of non-domestic species. Over 1,800 reptiles, birds and other non-domestic mammals are submitted to the VMTH annually for clinical assessment and treatment. In trips to private zoological collections of non-domestic species including Santa Fe Teaching Zoo, Central Florida Zoo, St. Augustine Alligator Farm, White Oak Plantation and the Lubee Bat Conservancy. White Oak Plantation maintains one of the worlds best private collection of exotic hoof stock, cheetah and waterfowl. In addition to clinical cases, there may be opportunities for exposure to various on going research projects in wildlife medicine.

4th year only, Cover Letter, CV/Transcript, 2 letters of reference. Prerequisite - Small Animal Medicine or Surgery rotation, including anesthesia must be completed prior to starting the externship.

Subject: VET	Catalog Nbr: 4033
Medicine, anesthesia, surgery, preventive medicine, clinical pathology, gross pathology. The student will work one-on-one with the staff veterinarian to make the preceptorship a worthwhile clinical experience. Duration: 6-8 Weeks Will Provide: Housing 4th year only, CV/Transcript, 2 letters of reference. Please include two time blocks in order of preference. Applications will not be accepted prior to one year before a preferred time period. 12400 SW 152 Street, Miami, FL 33157 Telephone: (305) 253-5050	

133131	Large Animal Medicine Rotation
Subject: VET	Catalog Nbr: 403
This three-week rotation provides clinical experience in the field of large animal internal medicine. Approximately 85% of the caseload consists of horses and the other 15% are made up of camelids, cattle, sheep, goats, and pot-bellied pigs. The learning objectives center on the recognition of large animal problems, the development of diagnostic and therapeutic plans and the improvement of technical skills. Students are expected to participate in the taking of clinical histories, the performing of physical examinations, the providing of care for their patients, seeing emergency cases and attending daily rounds. Students may broaden their experience by doing extra weeks in large animal medicine as an elective rotation in the spring, summer or fall. Prerequisite: Completion of the Preclinical Curriculum	

133138	Sea World of Orlando
Subject: VET	Catalog Nbr: 4034
Avian, Fishes, Aquatic Mammals. Minimum 40 hour/week involvement in all of activities. Duration: 3 minimum - 4 Week maximum 4th year only, CV, Cover letter, 2 letters of reference.	

Course Bulletin

Telephone: (407) 351-3600

133146	Wildlife Care Center
Subject: VET	Catalog Nbr: 4035
The Wildlife Care Center works to rescue, rehabilitate, and release native wildlife that has been harmed or displaced; to treat and place certain needy domestic, exotic and farm animals; and to educate the public toward coexistence with all animals. Duration: 3-6 Weeks 3200 S.W. 4th Avenue, Fort Lauderdale, FL 33315 Telephone: (954) 524-4302	

133147	Large Animal Surgery Rotation
Subject: VET	Catalog Nbr: 404
This rotation on the General Diagnostic and Surgery Service (GDSS) provides hands-on clinical experience in large animal surgery. During the rotation students will spend one week with General Surgery, one week with Sports Medicine and one week with the Emergency Service. The student participates in the diagnosis and management of both out and in-patients and is responsible for the day-to-day monitoring of assigned cases. The students' exposure to these cases will allow them to familiarize themselves with the available technique(s), formulate a diagnostic approach appropriate to the patient, and provide information regarding treatment and prognosis. Through daily oral presentations at ward rounds, the faculty gains insight into student development and helps in decision-making pertaining to continued therapy. The goals of the rotation include thoroughly familiarizing the student with common diagnostic and therapeutic procedures and to recreate, as nearly as possible, the responsibilities inherent in the practice of clinical large animal surgery and sports medicine. Prerequisite: Completion of the Preclinical Curriculum	

133156	Southeastern Cooperative Wildlife Disease Study (SCWDS)
Subject: VET	Catalog Nbr: 4036
Highly variable, wildlife. Duration: 3-12 weeks Students should apply by letter to the Director, SCWDS, College of Veterinary Medicine, The University of Georgia, Athens, GA 30602. The letter should include a general resume and the time period(s) preferred for the externship. The applicant should also have a letter sent from the academic dean at his/her college indicating approval of the externship. College of Veterinary Medicine, UGA, Athens, GA 30602 Telephone: (706) 542-1741

133171	Zoo Atlanta
Subject: VET	Catalog Nbr: 4038
Zoo Medicine (Preference given to Tuskegee students/University of Georgia Vet Students). General zoo animals, emphasis is placed on Great Apes and Reptiles. The extern will report to the veterinarian and the veterinary technician. Externs are involved with hospital and quarantine animal care. Externs rotate through keeper areas to become involved with general husbandry. Externs will assist in various medical procedures. Externs will have an opportunity to become more familiar with immobilization equipment. Duration: 6-8 Weeks, 1 extern per rotation. Cover Letter, CV, 2 letters of reference, a personal or phone interview is required. 800 Cherokee Avenue, Atlanta, GA 30315 Telephone: (404) 624-5600 info@zooatlanta.org	

133176	Ambulatory Medicine Rotation
Subject: VET	Catalog Nbr: 405
This rotation provides primarily on-farm, large animal medical & surgical training for the students. The majority of the practice consists of dairy cattle and horses, while small scale production and companion small ruminants (sheep, goats and camelids) and swine comprise a growing segment of the clientele. A significant amount of clinical time is devoted to dairy reproductive work (including some advanced reproductive technologies) and developing the herd health concept. An effort is made to provide hands-on clinical experience in a large animal general practice with emphasis on preventative and production medicine. Prerequisite: Completion of the Preclinical Curriculum	

133177	Peregrine Fund: Hawaiian Bird Conservation & Restoration
Subject: VET	Catalog Nbr: 4039

Course Bulletin

Avian medicine. The Olinda ESPF was established in 1986 by the Hawaii Division of Forestry and Wildlife for the propagation of endangered Hawaiian avifauna. Clinical experience will be provided during routine and emergency care of captive flock. Lab tests and their interpretation will be emphasized utilizing facilities on site. Students will spend a required portion of their time with the staff aviculturists learning basic avicultural skills and will have the opportunity to participate in any ongoing research projects. Duration: 4 weeks Note: This facility was transferred to the Peregrine Fund in March 1996 and this externship information has not been verified since then.

Will Provide: Housing/Stipend (\$100/week)

4th year only, Resume/CV, letter of interest (include desire dates for externship) and an appropriate letter of reference

535 Olinda Road, Makawao, Maui, HI 96768

Cambridge, MA
Telephone: (617) 432-1285

133232	Wildlife Clinic Rotation
Subject: VET	Catalog Nbr: 407
Students in the Wildlife Clinic rotation actively participate in the handling, diagnostics and medical and/or surgical treatment of a wide variety of native New England wildlife, including threatened and endangered species. A large number of sick, injured, and orphaned wildlife are seen. Species diversity varies tremendously from season to season. The Wildlife Clinic rotation provides experience with physical examinations, anesthesia, and radiology in wildlife species. Students gain experience in various clinical procedures, including giving fluids, venipuncture, intubation, and wound management. Students are not required to have previous hands-on experience with wildlife species prior to the rotation but are expected to be able to apply knowledge gained from didactic courses, including comparative medicine, to their cases. Because many of the species that the Clinic sees are not included in veterinary texts, the Clinic maintains an extensive library of wildlife related literature. Students are expected to utilize these resources to enhance their learning experience. Prerequisite: Completion of the Preclinical Curriculum	

133238	Office of Laboratory Animal Care, Univ. of Calif. Berkeley
Subject: VET	Catalog Nbr: 4046
OLAC provides husbandry & veterinary care, research services, surgical support, purchase of all live vertebrates, training of & technical personnel who use animals in teaching and research. All research with live vertebrates must be pre-approved by the Animal Care and Use Committee. Those interested in learning about laboratory animal practice in a basic science university. Berkeley, CA 94720 Telephone: (510) 642-6000	

133245	Alaska Sealife Center
Subject: VET	Catalog Nbr: 4047
The Alaska SeaLife Center is a unique cold-water marine facility located in Seward, AK. The center is dedicated to understanding and maintaining the marine ecosystems of Alaska through research, rehabilitation and public education and house a collection that includes stellar sea lions, harbor seals, alcids and several hundred fish and invertebrates typical of the Northern Pacific Ocean System. Objective: Provide direct contact for the student in an aquatic animal medicine program. Duration: Minimum length of time 6 weeks 301 Railway Avenue, Seward, AK 99664 Telephone: 1.800.224.2525 Fax: 907.224.6320 theresa_zabala@alaskasealife.org

133254	Honolulu Zoo
Subject: VET	Catalog Nbr: 4048
Students will be exposed to typical zoo clinical medicine in a medium sized (1,300 specimens of 280 species) government run zoo. Excursions to local Aquarium and marine mammal park may be possible. Species experience/encountered: zoo mammal (nonmarine), bird, reptile, amphibian. Resume 151 Kapahulu Avenue, Honolulu, HI 96815 Telephone: (808) 971-7171	

133260	Diagnostic Imaging Rotation
Subject: VET	Catalog Nbr: 408
This 2-week rotation prepares the student to correctly interpret and produce radiographs of large and small animals and to develop a greater understanding of diagnostic ultrasound. Common group activities include faculty rounds and laboratory exercises. Students will be assigned a continuous one-week block in each of the following areas: Radiology positioning and radiology interpretation and one week of ultrasound. As a student you will be under the supervision of the radiology technical staff, radiology residents and faculty. The student taking radiographs for the week will also provide unsupervised weekend and after-hours weekday coverage of the small animal radiology caseload. The rotation students are considered non-essential personnel. Most of the technical aspects needed to produce diagnostic radiographs in practice, including radiation safety, will be covered by observing and assisting the radiology technicians and by obtaining radiographs independently. During the radiograph reading week a combination of daily activities including the interpretation of teaching radiograph cases, and literature review will be performed under the supervision of the radiology faculty and residents. The ultrasound week allows for the observation of a variety of pathologic conditions in hospitalized patients, the discussion clinical case studies and the review of the fundamentals of ultrasound physics and anatomy. Grades for the rotation are cumulative for the whole 2 weeks and based on the input of faculty, residents and technical staff members. Grades are scored in accordance with a rubric. A textbook is not required for this course, although the independent use of books and other reference materials owned by the radiology section is encouraged. A handbook with all pertinent information regarding the rotation is available in Canvas for download. Prerequisite: Completion of the Preclinical Curriculum	

133263	Animal Hospital of Hawaii
Subject: VET	Catalog Nbr: 4049

133270	Department of Comparative Medicine, Cedars-Sinai Research Institute
Subject: VET	Catalog Nbr: 4050
Lab Animal - 50% small (mice, rats, hamsters); 50% large (rabbits, pigs, dogs) Description: AAALAC Int'l accredited research animal care and use program. 73 primary investigators and associated co-investigators with 230 protocols using animal models. Research is conducted in biochemistry, cardiology, endocrinology, gastroenterology, infectious diseases, ophthalmology, pulmonary, radiology and surgery. Student would be involved in animal receipt, quarantine/conditioning, surgical observation, post-operative management, clinical rounds and clinical records management, protocol evaluation, IACUC deliberations, clinical laboratory work, handling and restraint of lab animals, anesthesia, injection and blood collection, euthanasia, regulatory compliance issues. Resume CA	

133275	Anatomic & Clinical Pathology Rotation
Subject: VET	Catalog Nbr: 409
In this rotation student time is divided between the two disciplines of diagnostic pathology. The anatomic pathology portion of the rotation offers a "hands-on" opportunity to appreciate the concept that altered structure is the basis of altered function. In addition to being taught how to perform a postmortem examination, students correlate patient history, clinical signs and clinical diagnoses with gross and microscopic lesions to facilitate their understanding of the causes of disease and the mechanisms by which they are provoked. Tissue sampling for histologic examination is emphasized; however, the sampling of tissues for cytologic, microbiological and toxicologic examinations are also discussed. Students learn how to construct a concise gross necropsy report from postmortem findings and participate in weekly gross pathology rounds that are open to clinicians, house officers, and students. The clinical pathology portion of the rotation uses a case-based approach to review the principles and interpretation of laboratory tests including urinalysis, CBCs, chemistry profiles, and endocrinology assays. Students are given the opportunity to practice techniques such as preparation and examination of blood smears and urine sediment. They are introduced to the underlying principles of hematology and chemistry instrumentation and factors that can affect test results. Basic principles of evaluation of fine needle aspirate and fluid cytology samples are reviewed, and students practice the microscopic evaluation of cytology cases. Students generally meet at 8:00 AM in the pathology conference room. Mornings are typically devoted to discussion of clinical pathology case material. Afternoons are spent with anatomic pathology. The only dress code requirements for the clinical pathology section is that open-toed shoes and shorts are not allowed.	

Course Bulletin

Scrubs or coveralls and boots are required for postmortem examination activities. Students are not considered "essential" in the event of weather related campus closings.

Prerequisite: Completion of the Preclinical Curriculum

133305	Emergency And Critical Care Rotation
Subject: VET	Catalog Nbr: 410
This rotation provides exposure to small animal emergency medicine and also to cases that enter the hospital through the emergency service, including exotics. During the three-week core experience, students rotate between day and evening shifts on the ER as well as spend time on our ICU service. Students are expected to work weekend shifts during the rotation, but have at least 2 days off during each week. Students learn triage and stabilization of emergent conditions, and participate in many emergency procedures. Students also work shoulder to shoulder with clinicians to fully understand the pathophysiology behind a variety of common and not-so-common ER cases. Didactic rounds are held Monday, Wednesday, and Friday 1-2pm, with a 3-4 hour procedure lab held once during each rotation where we have hands on teaching of emergency/critical care procedures. Students may elect extra weeks in the ER or ICU throughout the course of their 4th year, scheduling for which is flexible. Prerequisite: Completion of the Preclinical Curriculum	

133310	Department of Animal Surgery, Warsaw Agricultural University
Subject: VET	Catalog Nbr: 4055
Radiology, 40% Large animal surgery, 60% Small animal surgery. Clinic of large animal surgery, clinic of small animal surgery, division of radiology and ultrasonography. Resume (Fourth year students only) UL.NOWOURSZYŃSKA 166, 02-787 WARSZAWA Poland

133351	Ethics Seminar
Subject: VET	Catalog Nbr: 413
The Senior Ethics Seminar provides fourth-year students an opportunity to analyze and discuss ethical questions gleaned from their own clinical experience. Students will participate in a written and oral presentation of an ethical case that has been experienced while on clinical rotations. The class instructor, a local veterinarian, will facilitate discussion and present other ethical cases that are often encountered in practice. This class is Pass/Fail and attendance and participation are required. Prerequisite: Completion of the Preclinical Curriculum

133394	Cardiology Rotation
Subject: VET	Catalog Nbr: 414
Students on the cardiology rotation will interact with dogs, cats, and, less commonly, large animal or exotic species with cardiovascular diseases. Goals for the rotation include development of auscultation and cardiovascular physical examination skills, ability to obtain arterial blood pressure, ability to obtain and interpret diagnostic electrocardiograms, ability to interpret thoracic radiographs, and ability to identify cardiac structures and common diseases via observation of echocardiography. Students should enter the rotation with a background knowledge of treatment options for cardiovascular diseases (drugs, diet, interventions) and should refine this knowledge and learn how to apply it to clinical cases during the course of the rotation. Prerequisite: Completion of the Preclinical Curriculum

133465	Neurology Rotation
Subject: VET	Catalog Nbr: 416
Neurology is a 2-week core rotation. During the rotation, students will obtain histories from owners of companion animals with neurologic disease, perform physical examinations, participate in the diagnostic evaluation of neurologic patients, and assist in surgery when necessary. Case rounds will take place each day in the mornings and evenings. Some emergency on-call duty will be expected. Teaching rounds will emphasize neurologic examination, lesion localization, and diagnosis and treatment of common neurologic conditions. Students should review neurological examination, localization and treatment options for the most common neurological disorders prior to entering the rotation. Students are expected to refine their knowledge basis, actively participate in the service tasks and improve their practical skills. Their evaluation will be based on their active and responsible performance. Prerequisite: Completion of the Preclinical Curriculum

133509	Oncology Rotation
Subject: VET	Catalog Nbr: 417
The oncology rotation is structured to allow students exposure to some of the most commonly diagnosed cancers in companion animals. Students will gain familiarity with treatment modalities such as chemotherapy, radiation therapy, along with diagnostic and staging procedures. Students will have the opportunity to see both newly diagnosed patients, current patients undergoing patients, and patients who have relapsed with their diagnosed cancer. As part of the management of these patients, students will be expected to communicate with owners, work with clinicians to devise treatment plans, perform physical examinations, interpret laboratory results, evaluate diagnostic imaging, and understand the importance of accurate record keeping in the complex clinical setting. The rotation will emphasize knowledge that is relevant to the general practitioner, and allow students to be able to confidently discuss the diagnosis of neoplasia and both referral and palliative treatment options with owners. Prerequisite: Completion of the Preclinical Curriculum

Under the direct supervision the clinic director or other staff doctors, students will perform preventative health care exams, develop diagnostic and treatment plans, communicate plan and fees to the clients, tailor a wellness plan that addresses the individual needs of the patient, as well as perform common procedures in a general practice setting. In order to provide the potential for students to get follow-up on their cases, the rotation is set up as a 3-week block. During the rotation, students will not only develop a better understanding of wellness health care, but will also develop communication skills by interacting with and informing owners regarding issues such as vaccination protocols, parasite control, proper nutrition, dermatologic concerns, behavior issues, weight management, senior pet concerns and general dentistry. In addition, the students will have the opportunity to support the OneHealth initiative by contributing to the education of high school students while offering primary veterinary care to a historically underserved pet population. Prerequisite: Completion of the Preclinical Curriculum

Subject: VET	Catalog Nbr: 427
A capstone pre-graduation core 1-week course has been added to the 4th year curriculum and will begin with the class of V13. The required program will avoid lecture format and emphasize panel discussions and role-play for interviews and client conversations. The emphasis will be on communication, financial skills, work-life balance, and leadership skills. Alumni and members of the MVMA will be recruited for discussions and mentorship. A major goal of the program is to provide content that is attractive to graduates going into practice or internships with emphasis on small animal, equine, or food animal medicine, and career pathways such as pathology and laboratory animal medicine. Specific topics include finances and debt management, family-life-career balance, insurance planning, mentoring, the art of negotiation, difficult financial negotiations, practice ownership, and changing jobs.	

133738	Fox Run Equine Center
Subject: VET	Catalog Nbr: 4106
100% Equine, 80% referral work, 20% farm call practice. Full surgical & medical facility. We have endoscopy, nuclear medicine/scintigraphy, thermography and numerous x-ray machines. We do approximately 200 joints/year. 25-50 colic's, and another 150-300 surgeries consisting of throats, long bone fractures, major lacerations and routine procedures. Complete equine medical and surgical facility = 80% hospital in-case/outcase/referral: 20% farm calls. 133744	Anesthesiology Rotation
Subject: VET	Catalog Nbr: 430
Students are taught to apply the basic principles learned in the didactic anesthesiology and pain management course from their third year. More specifically, students will assess patients prior to anesthesia and formulate an anesthetic/analgesic plan for the patient. They will perform the technical skills necessary for anesthesia (IV catheter and endotracheal tube placement, proper use of monitoring equipment) and monitor the patient to ensure appropriate anesthetic depth. Lastly, they will return the patient to state of consciousness while addressing its need for pain relief. During this rotation students will demonstrate knowledge and understanding of relevant clinical material using online work (reading and quizzes) in Canvas. When in clinics students will be under the direct supervision of a faculty anesthesiologist. Prerequisite: Completion of the Preclinical Curriculum	

133755	Yellowstone Animal Hospital
Subject: VET	Catalog Nbr: 4108
40% Small Animal, 30% Equine, 30% Food Animals. We have 3 mobile units. One of the vets occasionally uses a light plane for ranch calls. We provide ancillary services, such as health supplies, grooming, boarding, clipper sharpening and small animal out-call service. We expect the student to perform routine lab tests and clinical procedures, help with emergency calls, and primary patient care. At the end of the preceptorship period we expect an evaluation of our clinic, staff, and procedures including suggestions for improvement. Will Provide: Housing, \$75.00 stipend per week Resume, Brief letter of introduction. Indicate personal and professional interests. 109 Kornegay Ct, Cheyenne, WY 82009 Telephone: (307) 632-3795

135531	Gross Anatomy I
Subject: VET	Catalog Nbr: 101
This course consists of lectures and systematic dissection of the dog and cat, designed to gain a comprehensive knowledge of macroscopic anatomy of the carnivores (mainly dog, but important structural differences of the cat included). The objectives of this course are to understand and correctly use anatomical terminology, understand the organization of the skeleton (osteology), classification and function of various joints (arthrology), identification and attachments of axial and appendicular muscles (myology) and their innervation, effects of lack of innervation, the central versus peripheral nervous system, major nerves of the body (neurology), major vessels and their branches to organs (angiology), and organization of respiratory, digestive and urogenital tracts (splanchnology). Prerequisite: A sound knowledge of biology including taxonomy, microscopic anatomy of tissues and developmental anatomy is essential. At the end of the fall semester, the student is also expected to be able to integrate course material from microscopic and developmental anatomy with the gross anatomy.

Emergency medicine in high volume setting case load is varied and an affluent community allows quality work-ups, comprehensive client communications and progressive treatment plans. 4th year students only 416 Maple Ave West, Vienna, VA 22180 Telephone: (703) 281-5121	

135742	Alexandria Animal Hospital
Subject: VET	Catalog Nbr: 4344
State of the art medicine and surgery practice. Equipment includes ultrasound, fiber optic endoscopy, isoflurante anesthesia, oxygen cage, electrocardiograph, etc. One of the owners is a Diplomate of the American Board of Veterinary Practitioners and the other is board eligible. Description: The Alexandria Animal Hospital is currently seeking externs to work and learn in a progressive, large volume, 7 DVM small animal practice in Northern Virginia. The facility will also function as an Emergency service at night beginning in July. Applicants may choose to work with either service or a combination of the two. Will Provide: Housing Interested applicants should either write or call. 2660 Duke St, Alexandria, VA 22314 Telephone: (703) 751-2022 Fax: (703) 751-6426	

135768	Animal Emergency Center
Subject: VET	Catalog Nbr: 4347
Small animals and exotics on emergency. High volume practice for emergency medicine. Our Center provides the extern an excellent opportunity to "roll up their sleeves" and get actively involved in the resuscitation and care of the emergency patient. Though the majority of actual procedures will be done by the staff veterinarian or nurse, the externs have the opportunity to assist, observe, and learn innovative techniques and procedures. Emergency and critical care diagnostic, monitoring, surgical, and nutritional procedures rarely done in the practice or typical academic environment can be seen on almost a daily basis. In addition, the extern is mentally challenged by actively participating in case discussions, academic rounds, Drs./nurses cage	

Course Bulletin

rounds, self study programs, and a typical "question of the day". The number of externs present for any given week can vary from 2 to 3, and participate in 12 hour shifts, 5 days per week. The extern is invited and encouraged to attend weekly case conference, Grand Rounds presentations/discussions, and nurse CE meetings. Veterinary students will be evaluated based on the form provided by the university. Students can be evaluated at any level the university directs. A general list for evaluation would include: Professionalism, Punctuality, Enthusiasm, Willingness to learn, Level of basic medical knowledge and surgical skills, Ability to take histories and perform physical exams, Willing to learn about and help with all aspects of daily hospital operations. The Center is located in a 10,800 square-foot state-of-the-art facility equipped with a large waiting area, four exam rooms, two surgical suites, a large treatment room, a 40-cage ICU, isolation unit, ward runs, imaging room, lab, family/visiting room, offices, conference room, break/exercise room, and library. The hospital case load ranges from 500-1200 cases per month; priprary case load by referral from area primary-care veterinarians.

135792	Developmental Anatomy
Subject: VET	Catalog Nbr: 104
This course has two components: a). The first section of the course will cover general embryology. Topics discussed include gametogenesis, fertilization and early embryonic development (blastulation and gastrulation), implantation, and placentation among different domesticated animals. In this part of the course, basic cellular and molecular mechanisms involved in cell division, cell morphogenesis, cell-cell interaction, apoptosis, and organ development patterning will be reviewed b). The second part of the course	

Course Bulletin

will focus on organ development. Topics include the development of body cavities, axial and appendicular musculoskeletal system, as well as respiratory, gastrointestinal, cardiovascular, urogenital, endocrine, central nervous systems and head and neck development. Emphasis will be placed on normal development that compliments gross anatomy, and clinically important developmental defects that are important for the DVM student to understand. Mammalian fetuses and placentas will be demonstrated to the students during gross anatomy laboratory sessions. This will integrate gross anatomical and developmental aspects of the animal.

Prerequisite: A reasonable understanding of the gross anatomy of the mammalian body is essential. In addition, a sound understanding of cell and tissue biology is desired.

135797	Milford Animal Hospital
Subject: VET	Catalog Nbr: 4350
Small animal & exotic medicine and surgery. Dr. Plunkett does avian medicine and surgery. Student could also volunteer at our emergency clinic if they would like to. 256 Cherry St, Milford, CT 06460 Telephone: (203) 878-7471

135940	Gross Anatomy II
Subject: VET	Catalog Nbr: 107
This course, which consists of lectures and systematic dissection of the horse and a ruminant species (usually a calf or a goat), is designed to gain a comprehensive knowledge of the macroscopic anatomy of the equine	

Course Bulletin

and ruminant species. Clinically important anatomical differences in the Llama and the pig are also presented. The course also includes comparative anatomy of the head region of carnivores and herbivores, including the cranial nerves and the CNS.

The objectives of the course are to understand the basic and clinical anatomy of all regions of the body, including the visceral organs of the domesticated ungulates. Innervation and blood supply to organs are stressed where they are clinically important. Major differences in equine versus the ruminant musculoskeletal system and visceral organs are discussed in relation to functional adaptation of these species. Clinically relevant and species-specific anatomical differences in the pig and llama are emphasized in lecture and laboratory sessions, in addition to addressing structural and clinical importance. The large animal component of the course requires active student participation in teaching each other.

Prerequisite: A sound knowledge of basic anatomy of the carnivores is essential in order to appreciate the similarities and differences in large animals. The student is expected to review comparable canine anatomy before attending each large animal gross anatomy lecture and laboratory session.

135944	Bulger Veterinary Hospital
Subject: VET	Catalog Nbr: 4367

136046	Immunology
Subject:	Catalog Nbr:

Course Bulletin

VET 109

The objective of this course is to give students an introduction to the functions of the immune system. The first half of the course focuses on the basic concepts in innate and adaptive immune mechanisms. The functions of antigen-specific cells of the adaptive immunity, T and B lymphocytes, are discussed in particular, as well as the unique features of antigen-specific receptors of the lymphocytes, such as, how antigen-specific lymphocytes recognize antigens, and how the lymphocytes help in elimination of pathogens from the body. The importance of cytokines of innate and adaptive immunity in health and disease is also covered. In the second half of the course, the basic concepts learned in the first half are applied to the practical aspects of transplantation and immunization, as well as to clinical problems, resulting either from defects in the immune system (immunodeficiency) or as a consequence of immune responses (hypersensitivity and autoimmunity).

Prerequisite: Matriculation into the DVM program or with permission from the course director

136052	Village Veterinary Clinic

136135	Physiology
Subject:	Catalog Nbr:
VET	110
This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments,	

Course Bulletin

neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included.

136167	Applied Molecular Biology
Subject: VET	Catalog Nbr: 112
This course is presented to first year students to help them develop a better understanding of how prokaryotic and eukaryotic molecular biology is utilized in veterinary medicine. During the course we review gene structure and function as well as recombinant DNA technology. Topics include molecular diagnostics, using biotechnology to develop novel veterinary therapeutics, generating transgenic animals, therapeutic and reproductive cloning, gene therapy, RNAi, CRISPR/Cas9 methodology, biotechnology and conservation. We address scientific and ethical questions raised by some of these technologies. Prerequisite: Matriculation into the DVM program or with permission from the course director

136187	Clinical Radioanatomy & Principles of Imaging
Subject: VET	Catalog Nbr: 113
This course provides the fundamentals of different imaging modalities (radiography, CT, MRI, and ultrasound), and their application towards normal anatomy of dogs, cats, and horses. The first half of this course is devoted to image formation, radiation safety, image interpretation principles, imaging artifacts, and indications of the different imaging modalities. The second half of the course covers the normal anatomy of clinically relevant structures using different imaging modalities. The course serves as a foundation for the radiology and ultrasound courses during the second and third years of the curriculum.

136324	General Pathology
Subject:	Catalog Nbr:
VET	122
The objective of this course is to acquaint students with the cellular basis of disease as it relates to shared mechanisms across disease types and species. Major topics of study include cell injury, acute and chronic inflammation, coagulation and thrombosis, tissue repair, genetic and metabolic diseases, and neoplasia. This course introduces the basic science underlying disease initiation and progression in a clinical setting, and is the first exposure for many students the pathology of real-world diseases. Histopathology and a working knowledge of the terminology used to describe diseases presented. The laboratories help students apply the concepts learned in didactic lecture to practical cases involving common animal diseases seen in veterinary practice. Prerequisite: Matriculation into the DVM program or with permission from the course director

136690	VCA Santa Cruz Animal Hospital
Subject: VET	Catalog Nbr: 4455
The externship program is oriented toward facilitating the transition into private practice. Compared to the academic setting, exposure to more common problems is encountered. Performing physical exams and treatments, monitoring hospitalized cases, assisting on emergency service, securing diagnostic samples and participating with a staff veterinarian in case work ups are some of the responsibilities, focused on meeting the objectives of the program. Veterinary students in California having completed the third year of training have the privileges of certified technicians. Responsibilities include housekeeping procedures. Duration: 6 weeks or more (Accepted preceptors spending 6 weeks or more can expect to have their round trip transportation paid for) Will Provide: Housing, Laundry Write the clinic for application. 815 Mission St, Santa Cruz, CA 95060-3616 Telephone: (831) 427-3345 Fax: (831) 425-4907

Course Bulletin

136711	Comparative Anatomy and Physiology
Subject: VET	Catalog Nbr: 134
As an endeavor, comparative anatomy is fundamentally a study of adaptation and evolution. Thus, we will emphasize the structural and functional similarities among vertebrates and reinforce how important it is for veterinarians to be able to use their knowledge to extrapolate among species and taxonomic groups. Lectures will include an introduction to the functional anatomy and physiology of major vertebrate taxa fish, amphibians, reptiles, birds and mammals. Emphasis is placed on clinically relevant topics, species which graduates are likely to encounter, areas in which the taxa vary dramatically from their domestic animal counterparts and issues (e.g., cardiovascular anatomy) which may contribute significantly to students' understanding. Prerequisite: Matriculation into the DVM program or with permission from the course director	

136717	Veterinary Specialty & Emergency Center
Subject: VET	Catalog Nbr: 4458
VSEC LEVITTOWN 301 Veterans Highway Levittown, PA 19056 Phone 215-750-7884 Fax 215 752-3156 VSEC PHILADELPHIA 1114 South Front St Philadelphia, PA 19147 Phone 267-800-1950 Fax 215-752-3156 In 1994, Dr. Robert J. Orsher opened the doors to the Veterinary Specialty and Emergency Center (VSEC), a 24-hour multi-specialty referral and emergency small animal hospital in Bucks County, Pennsylvania. His goal for this veterinary specialty hospital was to bring board-certified specialists from multiple disciplines under one roof to practice as a cohesive team. Veterinary specialists in cardiology, dermatology, diagnostic imaging, emergency & critical care, holistic medicine & acupuncture, internal medicine, neurology/neurosurgery, oncology, surgery and radiation oncology have joined together to actualize Dr. Orsher's vision. VSEC offers leading-edge medicine while working closely with pet owners and their referring veterinarians to ensure the highest level of communication and care.	

136724	New Haven Central Hospital for Veterinary Medicine
Subject: VET	Catalog Nbr: 4459

Course Bulletin

New Haven Central Hospital is a 24 hour hospital supporting 11 out-patient clinics. Three interns run the Central Hospital Clinic and emergency service.

Subject: VET	Catalog Nbr: 4461
We are a small practice in a rural setting. This would enable us to spend time with the student and allow him/her the opportunity to thoroughly work up the case loads. 233 E Main St, Richmond, VT 05477 Telephone: (802) 434-4935	

136746	International Veterinary Medicine
Subject: VET	Catalog Nbr: 135
This course provides an overview of the contributions of veterinarians to global wild and domestic animal health, and the role of our profession in the One Health approach to animal, human and ecosystem health. Through a mix of presentations by experts, discussions, and readings, students will learn the role of international agencies, national governments, intergovernmental and non-governmental organizations, industry and private practitioners in international relations, trade, development, humanitarian assistance, conservation, and disease surveillance, control and prevention. The course will examine important trends and issues in international veterinary medicine including globalization, emerging infectious diseases, and impacts on wild and domestic animal and human health, food security, food safety and ecosystem services. Emphasis is placed on the development of socially, environmentally, technically and economically sound solutions to domestic and wild animal health challenges. Prerequisite: Matriculation into the DVM program or with permission from the course director

Small animal (dogs & cats only). We are an animal welfare organization concerned with animal over-population. The clinic was set-up by the state as a pilot spay/neuter clinic. 433 Hillside Ave, Hillside, NJ 07205 Telephone: (908) 964-6887	

136775	Veterinary Histology
Subject:	Catalog Nbr:
VET	136
The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.

137089	Veterinary Neurobiology
Subject: VET	Catalog Nbr: 205
This course provides an overview of veterinary neuroanatomy, pathobiology of neurological diseases, and clinical neurology. Neuroanatomic structures and pathways are discussed with a functional emphasis so that the student develops an understanding of how and why nervous system lesions produce neurological dysfunction. The response of the nervous system to injury and the pathogenesis of common small and large animal neurological diseases will also be covered in this course. The clinical manifestations of these diseases and the neurodiagnostic tests utilized to identify specific disorders will then be presented. The goal of this course is to provide the student with the necessary skills and information to be able to neuroanatomically localize lesions, formulate a differential diagnosis for that localization, understand the pathogenesis of these differentials, and interpret diagnostic tests used to rule in or rule out specific neurological disorders. Knowledge of neurological principles provided in this course has direct application to the practice of clinical neurology and neuroscience research. Prerequisite: Completion of Year 1 courses or with permission from the course director	

Course Bulletin

137098	Louisville Zoological Garden
Subject: VET	Catalog Nbr: 4505
Accompany the zoo veterinarian on rounds and assist in care of active cases. Assist in maintenance of medical records. Days tend to be long, but experience should be valuable to those interested in zoological medicine. Duration: 6 weeks (less is negotiable) Housing: Low-cost housing available at Univ. of Louisville 4th year only, Letter of interest describing background, interest, goals and dates requested, CV, Transcript, 2 letters of reference, Telephone interview. 1100 Trevilian Way, Louisville, KY 40213 Telephone: (502) 451-0440

Course Bulletin

137481	Respiratory Pathophysiology
Subject: VET	Catalog Nbr: 213
This course introduces students to changes in the structure and function of the respiratory system under pathological conditions. Diagnostic techniques for respiratory system evaluation, including imaging and obtaining samples for cytology and cultures, are introduced. Emphasis is placed on the role of respiratory pathogen defense mechanisms and how host-adapted respiratory bacteria and viruses overcome normal defenses. Common mechanisms of respiratory tissue injury, including inflammation, infection, and neoplasia are discussed, as well as injury. Injury and tissue response in the upper respiratory tract, airways, lungs, and pulmonary vasculature. Common diseases of the respiratory system in companion animals, cattle and small ruminants, horses, and laboratory animals are covered in detail emphasizing the causative agent, pathophysiological changes, and clinical progression for each of these. Course modules will be delivered through a combination of recorded lectures and discussion sessions. Prerequisite: Completion of Year 1 courses or with permission from the course director

137539	Cardiovascular Pathophysiology
Subject: VET	Catalog Nbr: 214
This course reviews and reinforces the student's previous knowledge of cardiovascular anatomy, histology, cell biology and physiology as it applies to physical diagnosis and assessment of cardiovascular function, regulation and control. The various diseases of the cardiovascular system are presented with a pathophysiological approach. The pathophysiology of cardiovascular disease is integrated with the diagnostic techniques used to assess the cardiovascular system including auscultation, electrocardiography, radiography, cardiac catheterization, echocardiography and other non-invasive tools. Differential diagnoses and therapeutics are introduced as a foundation for cardiovascular medicine.	
Prerequisite: Completion of Year 1 courses or with permission from the course director	

137545	West Esplanade Veterinary Clinic
Subject: VET	Catalog Nbr: 4561
The West Esplanade Veterinary Clinic provides medical, surgical, nutritional, behavioral, and general wellness care for Birds, Ferrets, Reptiles, Rabbits, Guinea Pigs (and other small rodents) as well as for unique pets such as sugar gliders and hedgehogs. 3640 West Esplanade Avenue, Metairie, LA 70002 Telephone: (504) 455-6386 Fax: (504) 455-9331

We offer total pet care including, but not limited to vaccinations, heartworm and leukemia testing, dermatology and allergy testing, digital radiology, ultrasound, behavior and training counseling, and dentistry. We have well equipped sterile surgical suites with intensive care units and patient monitoring abilities for routine and emergency surgical care. In addition to veterinary care, we offer spacious, climate controlled boarding facilities to ensure quality care for your pet while you are on vacation. The affiliation with our other practices gives you the expertise of 15 quality veterinarians and over 100 technicians, receptionists, assistants and other staff members.

137567	McKenzie Animal Clinic

137633	Applied Epidemiology and Evidence Based Medicine
Subject: VET	Catalog Nbr: 124
Understanding and applying epidemiology and biostatistics is critical for practicing evidence-based medicine, whether you work with individual patients or populations, in clinical medicine, research, public health, policy, or any of the myriad career paths open to veterinarians. This course aims to develop your appreciation for and ability to benefit from clinical epidemiology and biostatistics by foregoing most calculations in favor of developing concepts - that's probably a relief, isn't it? We will demonstrate some common calculations, and show that the process of calculating various test statistics and confidence intervals is not much more than variations on a theme. The course also integrates epidemiology and biostatistics with clinical practice and lifelong learning using current articles from the	

Course Bulletin

clinical literature. It emphasizes the art as well as the science of applying epidemiology and biostatistics to real life clinical problems. The Public Health, PBL, and other courses will continue to build on what you've learned in this course, and facilitate your future clinical decision-making.

Epidemiology and evidence-based medicine extend across all health disciplines and are important components of a One Health approach to understanding health and disease in domestic and wild animals, humans, and whole ecosystems necessary to truly address all aspects of health. Our common goal is to improve our patients' health by practicing high quality preventive and therapeutic veterinary medicine.

Prerequisite: Matriculation into the DVM program or with permission from the course director

137642	Atlantic Street Veterinary Hospital & Pet Emergency Center, Inc.
Subject: VET	Catalog Nbr: 4573

Subject: VET	Catalog Nbr: 4576

Course Bulletin

100% avian/exotic practice (including approximately 15% public instructions - Monterey Bay Aquarium)
Private practice seen exclusively avian and exotic species. A relatively large native species caseload is also seen. The facility is occupied by a small animal emergency clinic which may be able to provide some exposure for the student. 100% avian/exotic practice dealing primarily with pet animals, however, some avicultural and herputocultural clients are seen. Provides veterinary support for two local wildlife rehabilitation centers. Part time vet care at Monterey Bay Aquarium.

Will Provide: Housing

451 Canyon Del Rey Blvd, Del Rey Oaks, CA 93940

(831) 647-1147

137664	Anatomical Preparations Selective
Subject: VET	Catalog Nbr: 1001
In this selective students will learn a variety of techniques for preparing anatomical specimens for teaching and display purposes. We will begin by preparing skulls for the anatomy lab, and progress to skeletal articulation, air-drying of hollow viscera, and corrosion casts of bronchial and vascular systems. Students will also learn about the techniques of plastination. Individual projects are encouraged.	

137665	Law and Veterinary Medicine
Subject: VET	Catalog Nbr: 218
This course seeks to enable students to navigate the legal aspects of veterinary medicine and the legal status of animals, including contract law, employment law, legal consequences of ethical choices, legal consequences of medical choices - negligent or otherwise, applicable administrative, civil, and criminal procedural structures and issues, and the applicable regulatory and statutory schemes with which veterinarians - as practitioners, business owners, or employees - will need to contend. Students will consider both basic and advanced issues of law, and also more specific materials, including actual case studies, in order to challenge the students to inquire about, and otherwise determine, the legal needs and ramifications of their chosen profession, and begin to make students aware of the spectrum of practice requirements. Guest speakers are scheduled, who are experts in a particular aspect of Veterinary and Animal Law.	
Prerequisite: Completion of Year 1 courses or with permission from the course director	

137667	Durrell Wildlife Conservation Trust
Subject: VET	Catalog Nbr: 4577
Jersey is a unique center for captive breeding of endangered species combined with rehabilitation programs and training of zoologists from developing countries in wildlife management. Exclusively exotic practice located within the grounds of Jersey Zoo. Emphasis is on preventative medicine and a non-invasive approach previously done to the disruptive influence of interference with breeding animals in group structures. 137675	Northwoods Wildlife Center
Subject: VET	Catalog Nbr: 4578
This is a wildlife treatment & rehabilitation facility. The vets are small animal practitioners. They and their facilities were used for all initial diagnosis and treatments. All follow up rehabilitation was carried out at the center. 8683 Blumenstein Road - Highway 70 West, Minocqua, WI 54548 Telephone: (715) 356-7400 edu@northwoodswildlifecenter.com	

137678	Wildlife in Captivity Course
Subject: VET	Catalog Nbr: 1002
In readings, discussions, and field trips, students will explore welfare, conservation, health, and policy issues related to keeping wild animals in captivity. Topics will include exotic pets and trade in living wildlife; zoos and aquariums; captive breeding of endangered species; use of captive wildlife in research; animal shelters and sanctuaries; and wild animals in circuses and other forms of entertainment. Students will carry out independent or group projects examining specific problems of interest, and present the results of their investigations as a written report and an oral presentation. The course is co-taught by Dr. Rutberg and Dr. Mark Pokras, with participation from other Tufts faculty.	

137684	New England Aquarium
Subject: VET	Catalog Nbr: 4579
25% marine mammals, 25% fish, 25% amphibian, 25% marine birds and reptiles. Exposure to operation of public aquarium and marine mammal rescue program. Contact Charlie Innis, associate vet at: cinnis@neaq.org Central Wharf, Boston, MA 02110 Telephone: (617) 973-5246 cinnis@neaq.org	

137688	The Bird & Animal Hospital of Pinecrest
Subject: VET	Catalog Nbr: 4580
80% Avian, 20% Exotics (heavy on primates). Practice involves all levels of avian medicine (breeder, pet shop, private owner) with the latest in technology; rounds performed weekly at Monkey Jungle (large primate collection tourist attraction); back-up vet for Miami MetroZoo; many exotic show business clients.

Lab Animals: Mice, Rats, Guinea Pigs, Hamsters, Rabbits. Charles River Lab has provided over 50 years of service to the laboratory animal science community. It is the largest laboratory animal production company in the world, with facilities in 14 countries, including the U.S., Canada, Japan, and throughout Europe. The QC Lab was originally established to monitor the health status of our animal colonies through routine surveillance and diagnosis of disease. As the company grew, this QC function also expanded and eventually developed into a business that currently provides laboratory services support world-wide to both our internal production customers and investigators throughout the laboratory animal science research community. Duration: 3

137913	Envirovet
Subject: VET	Catalog Nbr: 1024
Tuition based course offered for six weeks during summer months (1 credit). This off-campus selective, held in Florida and Kenya, offers students a chance to study the broad range of issues that affect wildlife and ecosystem health, both terrestrial and aquatic, in industrialized and developing country contexts. This selective provides six weeks of intensive lecture, laboratory and field experience while highlighting the transdisciplinary, cooperative nature of work required for effective wildlife and ecosystem research, management and long-term problem solving. Envirovet faculty are recognized leaders in their fields and opportunities exist for students to explore various career options. Topics include global environmental threats, ecological health, biodiversity conservation, ecosystem management, emerging disease and the challenges inherent in meeting the needs of stakeholders in varying locations with different political and economic motivations. Throughout the program, students will learn how to employ new tools from information technologies, health sciences, landscape analysis, ecological risk reduction, ecosystem economics and methods for consensus building. These tools should help enable students to identify, prioritize and solve environmental problems and conduct effective environmental action planning, implementation and research.

Cape Wildlife located on a 5 acre preserve adjoining the Great Salt Marsh in West Barnstable. The Center provides veterinary medical and surgical care to injured, ill and orphaned wildlife. The Center also coordinates with local and staff wildlife rehabilitators to raise orphaned wild animals for release back to the wild. Under	

Course Bulletin

the supervision of the veterinarian and staff students will observe and may participate in medical care of native wildlife, as well as learn about and participate in the various tasks involved in properly caring for and raising orphaned young and recovering adult native species. There may also be an opportunity to learn about and observe surgery and holistic health care modalities such as acupuncture, chiropractic and homeopathy. Species presented to the clinic include, but are not limited to, raptors, songbirds, waterfowl, shorebirds, raccoons, squirrels, rabbits, turtles, and snakes. Daily assignments may include assessments and treatments, cleaning and feeding of ongoing cases as well as daily admissions and workups of new cases. There will be supervised participation expected in laboratory workups, radiographic assessments and medical care of cases. Each student will also be learning aspects of husbandry of wildlife in the clinical and rehabilitative settings. The responsibilities that an extern will be involved with will depend on his or her knowledge, experiences, background and goals. A highlight for every student is seeing an animal that came into the clinic ill, debilitated, orphaned or injured released back into its native environment healed and strong. Every effort will be made to ensure that each student has the opportunity to participate in at least one release if the cases so allow. All students are expected to participate in daily cleaning, feeding, diet preparation and laundry tasks. There will be time off scheduled for each student.

Housing: There is limited site housing available. The bedrooms are set up dormitory style with 1 to 4 students per room. There will be a small fee of \$15 per week charged to students staying at the facility to help defray the utility and upkeep costs of the available housing. We ask that students send a check to cover the cost of their accommodations prior to their arrival. Partial weeks may be paid as \$2.50 US per day. This fee may be waived in special circumstances, but must be approved prior to arrival.

4th year only, transcript; resume of training, education and/or experience related to the field of veterinary medicine; resume of training, education and/or experience related to the field of wildlife rehabilitation. Students for whom English is a foreign language must also submit a copy of their TOEFL or equivalent scores. Please list three preferred dates (3 week minimum) and also describe your interest in an externship at the Cape Wildlife Center.

138018	Greening Veterinary Medical Practice
Subject: VET	Catalog Nbr: 1035
This is a continuing research project to identify ways veterinary medicine can reduce it's environmental impact through economical alternatives to traditional practices. Each semester, selective students will pursue investigations that will lead to recommendations for alternatives in veterinary practice. Develop an inventory of all items used in the Tufts Wildlife Clinic. Work with Carolyn Corsiglia and Dr. Kaufman. For each item identify annual costs, number of units used, what the item is used for, who uses the item, fate of the item (general waste, biohazard waste, recycled), environmental impact of each item. Identify alternatives already in use and assess the effectiveness of those items. Rank items in order of greatest to least number items used entering the waste stream. Using sources such as Sustainable Hospitals investigate alternatives for each item including economic impact, labor required, accessibility, overall effect in reducing environmental impact (from source and use to disposal). Develop report including data found, alternatives already in use and recommendations for potential changes in practice. Report will be presented to the Greening the Grafton Campus Committee.

Subject:	Catalog Nbr:
VET	4655
The Veterinary Referral & Emergency Center would like to announce its externship (preceptorship) program. We are a 24 hour state-of-the-art referral and emergency center located in southwestern CT. Our 2-year-old, 12,000 square foot hospital is fully equipped for all types of surgical and medical cases. Diagnostic capabilities include a complete in-house lab, blood gas machine, video endoscopy, ultrasound, color flow doppler echocardiography, telemetry, CT Scan, and x-ray. Our specialists cover the fields of dentistry, dermatology, internal medicine, neurology, oncology, ophthalmology, and surgery. Externs can expect "hands on" training in our busy practice. Cage side rounds are conducted twice daily and didactic rounds are offered each week. Rotations through any or all of the specialties (including emergency) are encouraged. Arrangements can be made for any length of time and can be made to accommodate individual requirements. Housing: As a part of our externship program, we can provide housing at no cost to students either on site or one of our general practices. Applicants are taken on a first come first serve basis. We try to limit our program to one student at a time.

138125	Lead, Health and the Environment
Subject: VET	Catalog Nbr: 1046
Lead (Pb) is cheap and there is a long tradition of its use in almost all facets of society. But the toxic effects have been recognized for many years. As a result, society has greatly reduced some uses of Pb, including some paints, gasoline and solders because of threats to animals, people and the environment. Despite this, a wide variety of Pb products are currently available and many animals and people suffer from their toxic effects. In this self-directed selective, students will review the current state of knowledge on the toxicity of lead and its	

Course Bulletin

behavior in the environment. Each student will undertake a project designed either to compile and analyze information about lead, or to develop educational materials aimed at different stakeholders and/or interest groups. It is anticipated that there will be opportunities for interested students to gain experience in writing for publication and public speaking. Students considering this selective are advised to talk to Dr. Pokras in advance.

138345	Pets Are Wonderful Support (PAWS)
Subject: VET	Catalog Nbr: 4713
The PAWS (Pets Are Wonderful Support) Veterinary Internship Program is a 1 month internship at the PAWS San Francisco office. The objectives of this program are to educate future and current veterinarians about the significance of the human-animal bond, promote public health via education on the health benefits and risks of animal companionship, and provide experience with the operation of a community-based, non-profit organization. In addition to engaging in an educational project at the PAWS office and participating in the Food Bank, students have opportunities to participate in field days with Vet SOS mobile veterinary services to homeless camps in San Francisco and Pets Unlimited, a non-profit animal hospital and community partner of PAWS. In the past, interns have assisted with: * initiating a pilot study on the diversification of PAWS' client base * developing the PAWS Safe Pet Guidelines, which published and presented valuable information on the risks of zoonotic diseases to both the general public and health professionals. *creating the Health Benefits of Companion Animals brochure which documents the top scientific health benefits research Students in their 3rd and 4th years preferred. One to two internship students are selected yearly based on their letter of interest, background/C.V., and letters of recommendation. Internship possibilities are available in the Spring, Summer and Fall, A stipend of \$1000.00 is provided to cover travel and other miscellaneous expenses. PAWS is not able to guarantee housing. Stipend: \$1,000.00 for travel and expenses. website: www.pawssf.org Letter of interest, your CV and three references. 645 Harrison St, Suite 100, San Francisco, CA 94107 Telephone: (415) 979-9550 Fax: (415) 979-9269 abrooks@pawssf.org

138363	Lilly Research Laboratories
Subject: VET	Catalog Nbr: 4718

Course Bulletin

Lilly Research Laboratories is proud to announce the availability of an externship in veterinary pathology and laboratory animal medicine. Successful applicants will gain valuable experience in pathology and laboratory animal medicine, and develop a better understanding of the science of drug development. The objectives of this educational opportunity are to provide students with an experiential rotation in Veterinary Pathology and Laboratory Animal Medicine and to develop a broad overview of the many opportunities for employment of veterinarians within the pharmaceutical industry. Externs will work in Greenfield and Indianapolis facilities and will experience the process of pharmaceutical drug development from discovery research to clinical trials. Within the pathology department, externs will participate in investigative pathology, biomarker development, nonGLP studies, and nonclinical drug safety assessment. Externs will be expected to interact with members of the Clinical Pathology, Histology and Necropsy Management teams. In the Laboratory Animal Medicine, externs will work closely with laboratory animal veterinarians and staff as they interact with pathologists and other Lilly scientists in various aspects of the drug development process. Externs will have opportunities to work with veterinarians and other Lilly scientists in Discovery Research, Department of Adsorption-Distribution-Metabolism and Excretion, and ELANCO (Lilly's animal health pharmaceuticals company). A small amount of flexible time will be arranged so that the extern may choose to spend additional time in an area of interest. The duration of the externship is 3-4 weeks depending on the individual university schedules.

Eli Lilly and company will provide a generous stipend at the completion of the externship period that may be used to supplement the following expenses: housing while in Indianapolis area, travel to and from Indianapolis, meals, and rental car. If necessary, direct billing of some expenses may be arranged for the convenience of the extern.

Application materials are contained on the website [<https://www.scienteur.com>]. To apply, please visit the Scienteur website and register as a "Provider." Print and complete the application form and provide the required materials listed in the application check-list. There is no fee for application. Send the completed application packet to the following address: Externship in Veterinary Pathology and Laboratory Animal Medicine, c/o D.L. Craig, Lilly Research Laboratories, (address continued above). This externship is awarded on a competitive basis. Application packages should include a completed application form, current CV, university transcript, letter of intent that describes related work experiences and future employment intentions, letter of reference from the student's academic advisor, and one personal reference from an individual who is familiar with the applicant. Eli Lilly and Company advises that applications be sent to the address by March 30. Successful applicants will be notified as soon as possible. Successful applicants need to provide written proof of health insurance and results of tuberculosis testing, and will also be required to submit to drug testing and background checks prior to the externship period. The applicant and university will be required to sign confidentiality agreements prior to the externship period.

138411	Aquamed - Louisiana State University
Subject: VET	Catalog Nbr: 4732
The Gulf States Consortium of Colleges of Veterinary Medicine at Auburn University, Mississippi State University, Louisiana State University, Texas A&M University, and the University of Florida offers a four-week aquatic animal pathobiology course, AQUAMED, annually. The objective of AQUAMED is to impart an understanding of health management techniques and pathological processes relating to the etiology, diagnosis, and treatment of important aquatic animal diseases. Ornamental fish, commercially important fin fish, and shellfish will be emphasized. An overview of reptiles, marine mammals, and aquatic laboratory animals will be presented. Nationally and internationally recognized individuals will present topics relating to culture, maintenance, and health care of aquatic animals. Class size will be limited in order to allow maximum hands-on activities. Weeks 1-3 will be held at the Louisiana State University School of Veterinary Medicine. Week 4 will be conducted at the Louisiana Universities Marine Consortium (LUMCON) facility in Cocodrie, LA. Please see website for further details. Subject: VET	Catalog Nbr: 4752
Emergency medicine - we have a well-equipped emergency clinic that covers 35-46 hospitals. We have a very heavy case load. Small animal, some exotics and wildlife. Will provide: Stipend 643 State Route 27, Iselin, NJ 08830 Telephone: (732) 283-3535 Fax: 732-283-1902	

138637	Physiology
Subject: VET	Catalog Nbr: 110
This course explores the fundamental physiological regulatory mechanisms that control normal body functions common to most all domestic animals. It describes and examines the functions of cells, tissues, organs, and organ systems of the body, and the integrated physiological mechanisms required for the control of birth, growth, homeostasis and behavior. Themes traditionally encountered in biochemistry, histology and anatomy provide a framework for integration in this course. Bodily activities are defined and explored to better understand how they optimally benefit the animal. Topics include body fluid compartments, neuromuscular physiology and the special senses, cardiovascular and respiratory physiology, renal physiology and acid/base balance, gastrointestinal physiology, endocrinology and reproductive physiology. Clinical examples are occasionally introduced to emphasize connections between common diseases and altered physiologic states. Although mammalian physiology is stressed, other comparative aspects of physiology considered appropriate for the study of veterinary biomedical science are also included. Required: Engelking, LR: TEXTBOOK OF VETERINARY PHYSIOLOGICAL CHEMISTRY, Updated 2nd ed, 2011, Elsevier/Academic Press, Burlington, MA (ISBN: 978-0-12-384852-9). Engelking, LR: METABOLIC AND ENDOCRINE PHYSIOLOGY, 3rd ed, 2012, Teton NewMedia, Jackson, WY. Recommended: Engelking, LR: REVIEW OF VETERINARY PHYSIOLOGY, 1st ed, 2002, Teton NewMedia, Jackson, WY (ISBN 1-893441-69-5), or Engelking, LR: HUMAN PHYSIOLOGY PREP, Datachem Software, Inc., Westboro, MA, 2007. (An interactive disc

of questions/answers similar to the REVIEW OF VETERINARY PHYSIOLOGY above. This question bank has been placed on computers in the Tufts Veterinary School library.)
(The Elsevier/Academic Press text above can be ordered directly from the publisher (<http://www.elsevierdirect.com/product.jsp?isbn=9780123848529>), and the Teton NewMedia texts can be ordered from sales@tetonnm.com, or 1-877-306-9793). When ordering from Teton NewMedia, students should identify themselves as Tufts veterinary students in order to receive a 15% discount.

138638	Clinical Skills I
Subject: VET	Catalog Nbr: 105
Through active laboratories, this course introduces students to the core handling and examination skills for cats, dogs, cattle, horses, small ruminants, and pigs. Students will also learn essential introductory clinical procedures such as IV catheter placement, ultrasound, and suture technique. Additional information modules accompany the hands-on labs to deepen the knowledge of the above species. Emphasis is placed on self-reflection and growth mindset to encourage competence and confidence with clinical skills. Prerequisite: Matriculation into the DVM program or with permission from the course director	

138639	Case Based Learning II
Subject: VET	Catalog Nbr: 131
The principle objective of this course is to promote self-directed learning using clinical cases to enhance the students understanding of biochemical, physiological, and pathophysiological mechanisms and principles taught in lectures. The small group sessions are also intended to help students develop communication skills, cooperative behaviors, data base searching skills, and the ability to provide and receive constructive criticism concerning their critical thinking and interactive skills. Prerequisite: Completion of Case Based Learning I or with permission from the course director	

138640	First Year Farm Husbandry
Subject: VET	Catalog Nbr: 132
The objective of this program is to introduce students to the animal handling, husbandry practices and management approaches of various animal operations. The intent is to increase the skills and awareness of students with respect to the animal species with which they will be increasingly involved during the course of their veterinary education. The students are required to complete 1 day at an assigned farm or barn before the determined deadline. Prerequisite: Matriculation into the DVM program or with permission from the course director	

Course Bulletin

138642	Clinical Skills II
Subject: VET	Catalog Nbr: 208
This course is a continuation of the Clinical Skills I course offered during the first year of veterinary school. Active laboratories build on foundational knowledge taught in the previous year and continue the emphasis on self reflection and growth mindset to encourage competence and confidence in clinical skills. Focus is placed on physical examination skills that are specific to the different medical specialties such as cardiology, ophthalmology, and neurology. Students will also learn more advanced clinical procedures that are commonly performed by veterinarians during daily practice on a variety of species including cows, dogs, horses, birds, small ruminants, swine, and lab animals. Prerequisite: Completion of Clinical Skills I or with permission from the course director	

138643	Second Year Clinical Rotations
Subject: VET	Catalog Nbr: 239
The objective of this elective course is to give students an introduction to how students spend their day during their fourth year rotations. The experience is primarily observational. Each student will be assigned to one full day where they will shadow a fourth year student on one of the following services: Large animal medicine, Tufts Veterinary Field Service (TVFS), wildlife clinic, Tufts at Tech, Tufts Veterinary Emergency Treatment & Specialties (TVETS), dermatology, emergency/critical care, neurology or the Luke and Lily Lerner spay neuter clinic. The goal will be for students to gain insight into the responsibilities of a 4th year student, the flow of patient care, and communication both within the hospital and with clients. Students will be required to complete an assignment on Canvas following completion of their rotation. No textbook is needed for this course. A single short introductory Power Point presentation will be available on Canvas before the rotation starts. Prerequisite: Completion of Year 1 courses or with permission from the course director	

138644	Transfer Credit
Subject: TRAN	Catalog Nbr: 9999

138645	Clinical Radioanatomy & Principles of Imaging
Subject: VET	Catalog Nbr: 113
This course provides the fundamentals of different imaging modalities (radiography, CT, MRI, and ultrasound), and their application towards normal anatomy of dogs, cats, and horses. The first half of this course is devoted to image formation, radiation safety, image interpretation principles, imaging artifacts, and indications of the different imaging modalities. The second half of the course covers the normal anatomy of clinically relevant	

Course Bulletin

structures using different imaging modalities. The course serves as a foundation for the radiology and ultrasound courses during the second and third years of the curriculum.

138646	Veterinary Histology
Subject: VET	Catalog Nbr: 136
The object of the histology course is to help students understand the microanatomy of cell, tissues, and organs and to correlate structure with function. Lectures and laboratories will emphasize normal cell and tissue morphology as viewed with the light microscope, however when appropriate, transmission and scanning electron microscopic images in addition to cytology will be employed. Occasional examples of disease processes will be mentioned to enhance understanding of normal structure and function. Laboratory sessions will be set up as facilitator-guided small groups sessions. Attendance is required and students are expected to prepare ahead of time for each session so that they can answer questions posed by their facilitator. The course uses virtual microscopy, which is a method of viewing a digitized microscope specimen on a computer screen. Students can access the virtual slides (WebSlide® Virtual Microscopy) at home or on campus using a laptop or desktop computer.	

138668	Transboundary and Emerging Diseases of Animals and Initial Accreditation Training
Subject: VET	Catalog Nbr: 241
The Emerging and Exotic Diseases of Animals (EEDA) & Initial Accreditation Training (IAT) course is an online self-paced course designed to provide students with a fundamental understanding of recognize the majority of EEDA, the role of the veterinary profession in preventing, detecting, and responding to incursions of EEDA the role of the OIE, USDA, federal and state governments in responding to EEDA and the impact EEDA have on animal welfare, economy, food production, and human health. This course also fulfills initial requirements for veterinary accreditation. Prerequisite: Completion of Year 1 courses or with permission from the course director	

138671	Introduction to Small Animal Anesthesia and Surgery Techniques
Subject: VET	Catalog Nbr: 323
This course provides an introduction to basic surgical and anesthetic techniques. During the year, each student performs an ovariohysterectomy on two dogs and anesthetizes two additional dogs for ovariohysterectomy. Students are also responsible for pre- and postoperative care of their patients. Prerequisite: Completion of Year 2 courses or with permission from the course director	

138872	SASx Soft Tissue
Subject:	Catalog Nbr:

Course Bulletin

VET	428
Students are assigned to a surgeon and resident. They participate in the diagnostic work-up, surgical treatment and postoperative care of the patients on the service, based upon the caseload presented. They are expected to be familiar with all aspects of the cases under their care, and also those of the other student(s) on the service. All teaching is performed during case rounds and one-on-one at the operating table throughout the day. The students will be required to utilize their didactic background in assessing, then performing the surgical technique (via their assistance) and evaluating the postoperative course – including deductive reasoning along the way (to be able to think the case through to its conclusion). Although the students will not be performing the majority of the techniques they are exposed to, their exposure to these surgical cases will allow them to familiarize themselves with the available technique(s) and formulate a diagnostic approach to the patient, and provide appropriate information regarding treatment and prognosis. Every student spends two weeks on the soft-tissue service and two weeks in either the orthopedic or chief resident service. Prerequisite: Completion of the Preclinical Curriculum	

138873	SASx Ortho/Chief Resident
Subject: VET	Catalog Nbr: 429
Students are assigned to a surgeon and resident. They participate in the diagnostic work-up, surgical treatment and postoperative care of the patients on the service, based upon the caseload presented. They are expected to be familiar with all aspects of the cases under their care, and also those of the other student(s) on the service. All teaching is performed during case rounds and one-on-one at the operating table throughout the day. The students will be required to utilize their didactic background in assessing, then performing the surgical technique (via their assistance) and evaluating the postoperative course – including deductive reasoning along the way (to be able to think the case through to its conclusion). Although the students will not be performing the majority of the techniques they are exposed to, their exposure to these surgical cases will allow them to familiarize themselves with the available technique(s) and formulate a diagnostic approach to the patient, and provide appropriate information regarding treatment and prognosis. Every student spends two weeks on the soft-tissue service and two weeks in either the orthopedic or chief resident service. Prerequisite: Completion of the Preclinical Curriculum	

138875	Clinical Reasoning
Subject: VET	Catalog Nbr: 342
The overall goal of the clinical reasoning course is to help students learn how to navigate through clinical cases and arrive at a diagnostic and treatment plan so that they are better prepared for clinical rotations. The two clinical reasoning processes are explained, and students have opportunities to use both approaches as they reason through cases with guidance from content experts. Clinical cases featuring a variety of species will be provided by clinical experts in their field. Course objectives	

Course Bulletin

cover history taking, physical examination, the development of a problem list, differential diagnoses, diagnostic and treatment plans, interpretation of diagnostic tests, assigning a prognosis, financial considerations and end-of-life decision making.

Subject: VET	Catalog Nbr: 5108
Haines Road Animal Hospital was established in 1960 as a two veterinarian clinic operated by it's founder, Dr. Joe Larmon. In 1997, Dr. Javier Vicente bought the clinic after practicing here for five years. As a young veterinarian, Dr. Vicente had a deep love for animals and a vision of a veterinary hospital that treats pets with the same level of medical care and attention given to human patients. It was his insight and dedication to veterinary medicine that has brought Haines Road Animal Hospital where it is today- a five veterinarian, full- service facility offering the most progressive and up to date treatment for pets throughout St. Petersburg and surrounding communities. 4342 Haines Rd N St Petersburg, FL 33714 (727) 525-2118

139558	Rutland Veterinary Clinic, MA
Subject: VET	Catalog Nbr: 5220
Rutland Veterinary Clinic is a full service veterinary clinic that has been serving the beautiful town of Rutland and surrounding communities since 1995. We are located near the center of town at 203 Main St. (122-A), in one of the lovely old homes of Rutland. We may look small but we care for a large number of dogs, cats, ferrets, rabbits, pocket pets, and the occasional chicken, duck and small ruminant brought in by the varied human population of the area. Our reputation is built on honesty and compassion and a belief that the animals that give us so much love deserve the best in medical care. Rutland Vet Clinic is a fully equipped hospital with digital X-ray, in house laboratory capabilities, and fully monitored gas anesthesia. We offer a wide variety of dental and surgical procedures as well as many years of experience in medical diagnostics and treatment. We are committed to looking at the whole picture and working with owners to come up with the best treatment regime for their pets. Our hope is that with regular check ups and good preventative medicine potential problems can be found early and avoided. RVC 203 Main St., Rutland, Ma 01543 508-886-2286	

139559	New England Wildlife Center/Odd Pet Vet
Subject: VET	Catalog Nbr: 5221
The Odd Pet Vet is the only exclusively exotic veterinary practice in Eastern Massachusetts. It is the Center's most significant fee-for-service program. It is a goal of the Center to raise 40% of its income from commercial enterprises like the fee-for-service Odd Pet Vet. We treat about a hundred species of animals from chickens, turtles, snakes, lizards, rabbits, guinea pigs, hamsters, gerbils, mice, rats, degus, parrots, pigeons, and a host of invertebrates like scorpions, tarantulas, hermit crabs, and cockroaches. All proceeds from the Odd Pet Vet go directly to support educational programming and animal care at the Center. Volunteers and interns often start their learning careers at the Center helping Dr. Mertz with veterinary exams. The Odd Pet Vet has been featured in Discover Magazine, The Boston Globe Magazine, and the Today Show, and was designated the "Best of Boston 2004" for exotic animal care by Boston Magazine. 500 Columbian Street South Weymouth, MA 02190 781-682-4878 781-682-4872 (fax)

139572	Beltsville Agricultural Research Center
Subject: VET	Catalog Nbr: 5224
The Beltsville Agricultural Research Center provides an opportunity for University and College students to learn and gain experience in veterinary medicine through the Veterinary Services' Summer Internship Program. Veterinary students and graduates are also offered an opportunity to complete an externship in Food Animal Medicine. These programs provide experience and training in an agricultural environment dedicated to animal research. Program objectives include discussions on understanding contemporary clinical problem solving, and reviewing problem oriented medical records, with subjective and objective data analysis. There will be hands-on practice in history taking, animal inspection and examination. Hands-on practice in sampling, analyzing and use of clinical pathology data, as well as developing of herd health programs including use of integrated management systems will also be offered. The internship program will include clinical rounds activities and discussion of veterinary emerging diseases as well. If you or someone you know is interested in participating in the program, please contact Gregory Sample at the ANRI Veterinary Services Unit.

139709	U.S. Navy Marine Mammal Program
Subject: VET	Catalog Nbr: 5229
The Veterinary Medical Externship is designed for veterinary students, preferably during their senior level or fourth year at an accredited veterinary college. Four students are selected each year to participate in the 4-6 week externship; only one student is on-site at a time. During this time, they are given the opportunity to observe and participate in various clinical activities under the direction of the veterinary staff. In addition, they are expected to select and complete a clinical project in marine mammal medicine during their stay. The internships are voluntary, and students are responsible for their own transportation and housing arrangements. Students must be U.S. citizens in U.S.-accredited schools within the United States. Students interested in the Animal Care and Training internship are encouraged to send a resume, letter of intent including career goals and reasons for wanting the internship, an unofficial or official copy of their transcripts, proof of medical insurance, proof of U.S. citizenship, and a minimum of three letters of recommendation from professors or employers to the address below. Students interested in the Veterinary Medical Externship should also send a letter to the address below. This letter should include reasons for wanting to participate in the program and dates of availability. It is recommended that applicants list at least three prioritized availability dates. In addition, students must submit a curriculum vitae, two letters of reference, and proof of U.S. citizenship. Attn: Coordinator of Volunteer Opportunities Space and Naval Warfare Systems Center Pacific, Code 71510 53560 Hull Street San Diego, CA 92152 Or fax it to (619) 553-2678. 139710	North American Veterinary Community Conference
Subject: VET	Catalog Nbr: 5230

139711	Tambopata Macaw Project
Subject: VET	Catalog Nbr: 5231
The Tambopata Macaw Project is a long term research project on the ecology and conservation of macaws and parrots in the lowlands of southeastern Peru under the direction of Dr. Donald Brightsmith of the Schubot Exotic Bird Health Center at Texas A&M University. The Tambopata Macaw Project has been working with wildlife and local communities since 1989. A long history of dedicated research and monitoring has provided many insights into various aspects of parrot and wildlife of south eastern Peru. We are always looking to collaborate with anyone with a passion for conservation and biology. We have supported many national and international students and look forward to hearing from you should you wish to participate in our project or conduct your studies with our support. Tambopata is a unique forest environment, with the highest concentrations of avian clay licks in the world. A range of animals come to satisfy their need for salt along the river banks of the region. The experience of hundreds of macaws at a claylick is one of the world's ornithological highlights. The Tambopata faces imminent threat from the paving of a highway through one of the planet's most biodiverse regions. We need all the help and assistance we can get to try and understand what the impacts may be for one of the forests major icons. This site has been designed to explain research being undertaken, to provide public access to reports and publications about our macaw research and for anyone who is interested in the project and is thinking of taking part.

Subject: VET	Catalog Nbr: 5233
Established in the 1930s, Countryside Veterinary Clinic is a full-service, small and large animal veterinary hospital providing comprehensive medical, surgical, and dental care.	

Course Bulletin

The Countryside Veterinary Clinic provides a broad spectrum of diagnostic procedures through in-house testing and the use of external laboratories. We also work closely with local practices when special diagnostic procedures are required. Both of our facilities include a pharmacy, in-hospital surgery room, in-house x-ray capabilities, indoor boarding kennels with outdoor walking areas.

At Countryside Veterinary Clinic we strive to offer not only sound advice, but also optimal veterinary care, thus allowing you the enjoyment of your companion for a maximum number of years. Our job is not only to treat your pet when he or she isn't feeling well, but also to help you learn how to keep your best friend happy and healthy.

Subject: VET	Catalog Nbr: 5239
Rose Hill Veterinary Practice was founded in 1998 with the goal of providing full-service care to all animals in a previously underserved portion of the Virginia Piedmont. With headquarters in Rappahannock County, the practice has grown to include two full-service facilities. The Large Animal Practice started in 1998 as a solo ambulatory practice and now has three veterinarians providing full-service, farm-to-farm care. In 2006, we opened a treatment facility for our Large Animal practice that allows a greater depth of care and houses some of the most advanced equipment and services available. In 2003, we opened our full-service Small Animal Clinic where our clients also enjoy a dedicated staff that provides the most in-depth care with the most advanced equipment in the region. Our two veterinarians provide high quality medicine and surgery in a quiet, relaxed environment where both the patient and the owner can enjoy their visit. Our support staff is among the most experienced, talented and compassionate within our profession. Whether you have a large farm operation that needs a veterinarian or you have a tiny kitten that needs care, Rose Hill Veterinary Practice, P.C. has the tools and the trained staff to assure a positive experience for all. We are all dedicated to providing quality client service in a friendly and professional manner. Rose Hill Veterinary Practice PC Large Animal Clinic

Our Mission/Vision and Purpose reflect that commitment and inspire us to achieve excellence in everything we do. Mission/Vision: The VESC will provide extraordinary care to our patients, clients and colleagues. Through a collaborative and supportive effort we will provide a challenging and stimulating work environment. An environment that motivates each and every individual to achieve goals they never thought possible. We shall foster a fiscally successful business that, while growing to its full potential, remains ethical and fair in all aspects of its day to day business. Purpose: To forever nurture & enhance the human animal bond. 3312 West Cary StreetRichmond, VA 23221 (p) 804.353.9000 (f) 804.353.9271 2460 Colony Crossing PlaceMidlothian, VA 23112 (p) 804.744.9800 (f) 804.744.4842

VET 5249

I am a solo practitioner that does about 75% dairy. The rest is divided up between small ruminants (7%), camelid (7%), cervid (7%), and beef (<5%). The practice is based out of my home and I have a full-time office/business manager. Room and board are provided in our home by a basement efficiency. The student would be able to go on all regularly scheduled visits and emergency calls, averaging anywhere from 3-8 stops in one 10-12-hour day. Procedures include routine herd health work (rectal palpations via ultrasound, some records analysis and profit team meetings), LDA/RDA surgeries, dehorning, mastitis culturing, fecal samples, vaccinations, castrations, dystocias, sick animal medicines, C-sections, etc. My clients like interactive students! Students are expected to attend all calls, regular and emergency. Weekend duties are optional. Students are expected to contribute to discussions and actively want to learn and participate in activities. Students will be assigned to work through one herd problem during their rotation with my supervision.

Student Supervision

Weekdays average anywhere from 6-12 hours of work per day depending on the number of sick/emergency visits. Weekend visits are emergency only so hours are variable.

139839	Dumb Friends League
Subject: VET	Catalog Nbr: 5250
When our organization was founded in 1910, it was named after a London, England, animal welfare group called "Our Dumb Friends League." In those days, the term "dumb" was widely used to refer to animals because they lacked the power of human speech. Today, the Dumb Friends League, headquartered in Denver, is the largest community-based animal welfare organization in the Rocky Mountain region—providing a strong and steadfast voice for those who cannot speak for themselves. As part of a compassionate community, we: •Rescue sick, injured and neglected animals •Investigate cases of cruelty and abuse •Provide shelter, veterinary care, and behavior and training programs to homeless companion animals and horses •Adopt homeless pets and horses to new homes •Reduce pet overpopulation through mobile spay and neuter projects in underserved areas •Offer learning opportunities for the public to keep more pets in homes •Educate children and adults about animals and their needs 2080 S Quebec St, Denver, CO 80231 (303) 751-5772

Subject: VET	Catalog Nbr: 5266
The Great Plains Veterinary Educational Center (GPVEC) provides education to veterinary students and practitioners through a cooperative agreement between Iowa State University, the University of Nebraska, and the U.S. Meat Animal Research Center (USMARC). The teaching program is primarily in the food animal health and production management of beef cattle. Large livestock populations are available at the USMARC which serve as a major teaching resource, allowing students to participate in routine individual animal health care as well as specific herd activities that are part of the yearly livestock production cycle. The GPVEC also provides numerous quality continuing education seminars to practicing veterinarians and livestock specialists. To promote the veterinarian-producer partnership concept, producers are welcome to join their veterinarians at many of the seminars. The Production Medicine Residency Program available at the GPVEC for veterinarians with two or more years of food animal practice experience provides in-depth interdisciplinary training in beef production and economics. Veterinary graduate students may complete a distance MS through this program. P.O. Box 148, 820 Road 313, Clay Center, NE 68933 402-762-4500

Subject: VET	Catalog Nbr: 5295
PHS/SPCA is a private, independent, non-profit, and much more than a no-kill shelter. We've rehomed 100% of the healthy dogs and cats in our care since 2003 and promise to do this going forward. While rewarding, this isn't our most challenging work and doesn't define us. We accept our community's sick, injured, abused, unwanted, stray, neglected and older animals; donations to our Hope Program enable us to help and rehome approximately 200 every month. (Sadly, private shelters in many communities never give them a chance). We rehabilitate wildlife, make spay/neuter free for our low or fixed-income residents, educate children, and investigate animal cruelty. PHS/SPCA is one of the few shelters in the entire state accredited by the American Animal Hospital association and we're a gold-level GuideStar Exchange participant (click the seal below to access our GuideStar nonprofit report). Most important, we've earned our community's trust, involvement and support. We take our work and mission seriously, but also have fun. It's why we've adopted "Sit Happens!" as our Behavior & Training Dept slogan and have "Go Nuts" emblazon across the back of our mobile spay/neuter clinic. Most important, we've earned our community's trust, involvement and support. 12 Airport Boulevard, San Mateo, CA 94401 Phone 650.340.7022 Fax 650.348.7891

DVM students staff the day-to-day activities of the AVM Program. AVM is an educational, career exploration program for individuals (6th graders through adults) interested in pursuing a degree in veterinary medicine. Duties include speaker confirmation and support, farm animal management and processing, presentation of information on veterinary specialty areas, leading discussions, mentoring prospective applicants to the school, providing information about the DVM program/Tufts, managing the shadow program, and other duties as required by the Director. If interested, submit cover letter and resume, Administration Building, Room 216, Grafton Campus. Selected candidates will be interviewed for the positions. Must have excellent animal-handling, interpersonal and organizational skills as well as reliable transportation.

Lakeview Veterinary Clinic is a modern, full-service, small animal practice offering medical, surgical, dental, and preventative care.

In addition to cats and dogs, our own Bridget Baker, DVM provides preventative health services for exotic species including rabbits, rodents, ferrets, birds, and some reptile species. Our services include routine wellness exams, consultations about nutrition, husbandry, and behavioral issues, rabbit spays, small mammal neuters, hormone implants, fecal testing, and in-house blood analysis. We also use specialty laboratories for avian DNA sexing and disease testing. Our facility provides safe and reliable sedation and anesthesia tailored to exotic animals, and we work with the Special Species Health Service at UW-Madison to offer advanced diagnostics, advanced procedures, and after-hours emergency care.

139967	Sydney Animal Behaviour Service
Subject: VET	Catalog Nbr: 5326
Sydney Animal Behaviour Service is the premier behavioural medicine practice in Australia, run by Registered Veterinary Specialist in Animal Behaviour - Dr Kersti Seksel - together with Registered Veterinary Behaviour consultants - Dr Gaille Perry, Dr Jacqui Ley and Dr Caroline Perrin. They are all veterinarians with further qualifications in Veterinary Behavioural Medicine (Animal Behaviour). Behaviour problems may have an underlying or concurrent medical problem, therefore assessment by a veterinarian is very important. Since 1992, cases from all over Australia involving dog, cat, bird and horse behaviour problems have been assessed by the team at SABS. Problems such as elimination disorders, aggression, fears and phobias, separation anxiety, obsessive compulsive disorders, cognitive dysfunction are commonly seen. These conditions and many others have been successfully managed and treated using up-to-date behaviour modification techniques, environmental management and sometimes medication that is individually tailored to each case. Sydney Animal Behaviour Service 55 Ethel Street, Seaforth, NSW, 2092. Telephone number is +61 2 9949 8511. FAX number is +61 2 9949 6364. Send an email to sabs@sabs.com.au.

139974	Cells and Tissue Types
Subject: VET	Catalog Nbr: 137

140001	Organ System Structure & Function I
Subject: VET	Catalog Nbr: 139
This course will cover basics of cell biology with special emphasis on the ability of cells to interact with their environment and survive, reproduce themselves, communicate with their neighbors, and use the same genetic code to produce modifications that allow cells to have specialized functions. An introduction to histology will be presented, with focus on recognition of the four basic tissue types (epithelium, connective	

Course Bulletin

tissue – including bone marrow, cartilage and bone), muscle and nervous tissue). The course will introduce students to basic concepts related to cellular physiology, cover the physiology and histology of the Nervous System including the Autonomic Nervous System and Special Senses, the Respiratory System and the Cardiovascular System. The Renal System, Acid-Base Physiology, Gastrointestinal System, Endocrine System and Reproductive Systems will be covered in OSSF II. Emphasis will be placed on the importance of these systems in veterinary medicine.

The laboratories in OSSFI will use virtual microscopy which allows viewing digitized microscope specimens on a computer screen. Students can access the virtual digital slides at home or on campus using a laptop or desktop computer.

Prerequisite: Matriculation into the DVM program or with permission from the course director

140017	Organ System Structure & Function II
Subject: VET	Catalog Nbr: 140
This course is a continuation of OSSF-I. It explores the fundamental physiological regulatory mechanisms that control normal body functions common to all domestic animals. As in the previous course, physiology and histology lectures and laboratories are interwoven to illustrate how the microscopic anatomy of different organs facilitates their respective specialized functions. The organ systems covered in OSSF-II include: gastrointestinal, endocrine and reproductive systems. Clinical examples and/or cases are occasionally introduced in lectures to emphasize connections between common diseases and altered physiological states. Prerequisite: Completion of Organ System Structure & Function I or with permission from the course director	

140018	Anatomy I
Subject: VET	Catalog Nbr: 141
The objectives of this course are to understand and correctly use anatomical terminology, understand the organization of the musculoskeletal system, the central and peripheral nervous system, the organization and topography of the cardiovascular, respiratory, digestive, lymphatic, and urogenital systems by lecture and systematic dissection of carnivores (dogs and cats). Clinically important developmental and anatomical issues will also be covered. Prerequisite: Matriculation into the DVM program or with permission from the course director	

140019	Anatomy II
Subject: VET	Catalog Nbr: 142
This course builds on what the students learned in Anatomy I and extends the information to large animals. The course will first consist of lectures and systematic dissection of carnivore heads. It will continue in a	

Course Bulletin

comparative framework with lectures and systematic dissection of mammals belonging to the order artiodactyla (camelids, ruminants, and pigs) and perissodactyla (horses). Major differences in equine versus ruminant musculoskeletal systems and visceral organs will be discussed in relationship to their functional adaptations. Clinical relevant differences and similarities will be addressed.

Prerequisite: Completion of Anatomy I or with permission from the course director

140020	Epidemiology of Zoonotic Diseases
Subject: VET	Catalog Nbr: 1285

140031	Dermatology Rotation
Subject: VET	Catalog Nbr: 436
The Dermatology Service operates out of the Foster Hospital for Small Animals. Students are assigned cases based on the appointment schedule and should read the history thoroughly to prepare for each appointment prior to the start of the day. The student greets the client, obtains a history, examines the animal, collects samples, and reports to the attending clinician or resident. As this is an out-patient service, discharge instructions and collecting the medications from pharmacy should be a priority. The professional report should be completed the same day and a follow up phone call to the client or the referring veterinarian may be necessary, in consultation with the dermatologist. Prerequisite: Completion of the Preclinical Curriculum	

140032	CBSET
Subject: VET	Catalog Nbr: 5331
500 Shire Way, Lexington, MA 02421 Tel: 781-541-5555 info@cbset.org CBSET, Inc. is a not-for-profit preclinical contract research organization (CRO) dedicated to biomedical research, education and early-stage medical device testing. Our focus is helping companies develop unique tools and new methods to promote early diagnosis and deliver innovative treatments for complex diseases. We work with our sponsors to develop and test medical devices and techniques in the fields of interventional cardiology and cardiovascular surgery, minimally-invasive surgery, drug delivery, medical device testing, drug and medical device safety, and diagnostic imaging, among other therapeutic areas.	

140033	Fremont Veterinary Clinic

Comfort and Efficiency

The Clinic is set up with comfort and efficiency in mind from the beginning, with separate entrances for our feline and canine patients

A Friendly Greeting

Experienced receptionists will greet you and prepare your pets records for the doctor. They also will schedule appointments, facilitate prescription refills and help you choose the best products for your pet care needs.

Exam Rooms

The Clinic has comfortable examination rooms where you and your pet will meet with a Doctor for examinations, vaccinations, and to discuss any concerns you might have about your pet's health, diet or behavior.

Treatment Rooms

Part of the Clinic that most people don't see, the treatment rooms are used for procedures that are more sophisticated than can be done in the Exam Rooms, but don't require all the technology of the Operating Room.

Operating Room

Surgeries take place in an operating suite which is set up much like a human operating room, with state of the art equipment for administering anesthesia and monitoring patients' vital functions.

Dentistry

Dental care is important to your pet's overall health. We have specialized equipment for dental work, such as a digital dental x-ray unit that provides us with instant views of your pets teeth, a superior monitoring system during anesthesia and constant attention to your pet's comfort during and after the procedure.

Pharmacy

The Doctors are supported in their work by a full pharmacy. Additionally, we work with compounding pharmacies to prepare medications that are easiest to medicate your pet with.

Laboratory

An on-site lab allows processing of tests.

Imaging

We now have a state-of-the art digital x-ray unit. All of our radiographs are uploaded and reviewed by board certified radiologists. Digital radiology gives us the specialist's interpretation within hours instead of days, allowing for a fast response in your pets' care. We have a human grade ultrasound machine that greatly facilitates the level of care we can deliver in both routine and emergency situations. Fremont has 2 certified ultrasound technicians.

140047	Hillsdale Animal Hospital
Subject: VET	Catalog Nbr: 5343
201 Broadway, Hillsdale, NJ 07642 (201) 358-6520 At Hillsdale Animal Hospital, we strive to help your pets achieve and maintain genuinely improved health, rather than temporary relief of symptoms. We try to achieve this goal by maximizing the use of healthy foods, nutritional supplements, and natural medicines, while minimizing the use of conventional pharmaceuticals. Protocols to achieve our goals center on: Nutrition - whole fresh foods - truly premium pet foods - nutritional supplementation (vitamins, minerals, etc.) Minimized use of "toxic" medicines - vaccines - heartworm preventatives - flea and tick control products - conventional pharmaceuticals Increased use of natural/alternative therapies - acupuncture - chiropractic care - herbal remedies - homeopathic remedies We believe that client education is of paramount importance to helping pets achieve better health. The more knowledgeable clients are about their pets' health (or lack thereof), the more able they are to make informed decisions/choices. This enables us to do our job better. We consider the "healthcare team" to be the staff at our practice, the pet's owner(s), and the pet.

	Subject: VET	Catalog Nbr: 3001
Students will gain experience in interpreting small animal radiographs and alternate imaging studies through initial self study of clinical cases followed by a group discussion with radiologists.		

140076	Enrichment Week-Does Your Patient Think You Are A Predator?	
	Subject: VET	Catalog Nbr: 3002
This program is designed to prepare non-equine oriented students for HLA clinical rotations. The focus is on effective methods of interacting with equine patients and their owners. Students will have hands-on practice in approaching and communicating with equines and their handlers. Course Objectives: -Become aware of how (your) energy and body language effects horse behavior -Understand what the horse is communicating (to you) and how best to respond to create confidence and trust with the horse and handler -Gain effective client communication skills -Learn how to think like a horse (right brain vs left brain) to better understand your patient -Improve attention, mindfulness and focus while taking an equine patient case history		

140077	Enrichment Week-Small Animal Anesthesia Dry Lab	
	Subject: VET	Catalog Nbr: 3003
Do you feel prepared to come up with sedation and anesthesia protocols for your patients on clinics? Did you find anesthesia during ISAST to be relaxing and uneventful? If you answered no to either of those questions than this elective is for you. The focus of the elective will be to help the student become prepared to come up with sedation and anesthesia protocols when they hit the clinic. We will cover the basic process for working up a case on the small animal anesthesia service but will also go over how to work up a case when you are on another service such as small animal surgery, ER or medicine. In addition, we will discuss "real world" protocols that you will be using on the Tufts at Tech rotation. This four hour session is designed to be a bridge		

Course Bulletin

from the class room to the clinic.

In addition to reviewing the paper work and protocols used on rotation, we will also provide an opportunity to practice clinical skills including IV catheter placement and endotracheal intubation using models. We will create clinical scenarios or drills for you to run through so that you can practice how you will prepare, anesthetize and monitor an actual patient under anesthesia. We will also have anesthesia monitors and equipment available for you to practice with and ask questions about.

Specific skills that will be covered include:

- Designing a sedation and anesthesia protocols for a sick and a healthy patients
- Calculating CRIs and understanding fluid therapy under anesthesia
- Set up and pressure check an anesthesia machine, select proper circuit, use a bair
- Fill out and use an anesthesia record
- Steps for placing an IV catheter and for intubation
- Trouble shooting a problem case and responding to anesthetic emergencies

140078	Enrichment Week-Feeding Tubes & Guidelines: SA Clinical Nutrition
Subject: VET	Catalog Nbr: 3004
Students will participate in two sections of the lab: practical and clinical use of feeding tubes. The first section will spend two hours being shown how to and practicing e-tube placement in dogs and cats. A video and handout will be sent to the students prior to the elective that they should review. The second section will be spent working through clinical cases that require feeding tubes. Students will be mentored on how to: 1) select appropriate diets based on patient requirements, 2) write feeding orders for their patient while hospitalized, and 3) produce a written consultation with discharge orders for their patient once ready to go home.	

140079	Enrichment Week-SA Nephrology/Urology
Subject: VET	Catalog Nbr: 3005
There will be a lecture and discussion session each day describing indications and more specific "how to" for clinical techniques in nephrology (peritoneal dialysis, intermittent hemodialysis, continuous renal replacement therapy, laser lithotripsy, urodynamics, cystoscopy). There will be hands-on labs in dialysis, urodynamics, and possibly cystoscopy and laser lithotripsy. Clinical cases will be discussed, and additional techniques will be demonstrated or performed, depending on caseload.	

140080	Enrichment Week-Germplasm Cryopreservation
Subject: VET	Catalog Nbr: 3006
Designed for students with an interest in advanced reproductive technologies who would like to gain experience in the areas of embryo and semen collection and cryopreservation. The course will be held at the SVF Foundation located in Newport, RI. The mission of the SVF Foundation is to preserve germplasm of rare and endangered breeds of livestock that are threatened by extinction by creating and maintaining a genetic	

Course Bulletin

bank consisting of frozen embryos, semen, fibroblasts and serum. Course topics/procedures will include superovulation and non-surgical embryo collection from cattle, superovulation and surgical embryo collection from sheep and goats, semen collection via artificial vagina from sheep and goats, embryo and semen cryopreservation, evaluation of sperm morphology and post-thaw sperm viability, embryo handling and morphologic evaluation, principles of cryopreservation (slow equilibrium freezing vs. vitrification) and long term storage in liquid nitrogen. The course is largely hands-on and students will participate in the actual collection, processing, assessment, and freezing of embryos and semen. For further information about the SVF Foundation, visit www.svffoundation.org.

140081	Enrichment Week-Dental Extractions and Radiography
Subject: VET	Catalog Nbr: 3007
Hands-on introduction to dental radiography (taking, developing, evaluating) and tooth extraction (including single and multi-rooted teeth, involving use of a high-speed dental drill and flap techniques).	

140082	Enrichment Week-Camelid Commons Procedural Skills
Subject: VET	Catalog Nbr: 3008
This is a one day elective that will allow students to perform any and all of the procedures listed: Fecal exams and identify common parasites, IV jugular catheter placement, abdominocentesis, spinal fluid collection, blood collection, castration, anything else time will permit.	

140083	Enrichment Week-Shelter Dog Dental Day
Subject: VET	Catalog Nbr: 3009
Students will work in teams to anesthetize and perform dental prophylaxis on a healthy shelter dog who is in need of dental care before adoption. Each student will get to do the dental work on one half of a dog's mouth. Cleaning procedures will be performed by the student under the supervision of Dr. Joo and Dr. Rosenblad. Extractions will be performed by the veterinary dentists and observed by students, however the students are encouraged to enroll in the cadaver lab to be held on Friday when the students will practice extractions. While one student is cleaning teeth, the other team member will be responsible for the dog's anesthesia under the supervision of Dr. McCobb (team will swap roles half way through the procedure). Anesthetic protocols, risks and pain management for dental procedures will be discussed. Students will be required to be in the spay lab by 7 am to perform "SOAPS" and ready the patients for anesthesia.	

140084	Enrichment Week-Tufts VETS/ECC
Subject: VET	Catalog Nbr: 3010
Tufts Veterinary Emergency Treatment & Specialties - E/CC rotation. During these 2-3 day rotations you will shadow our doctors receiving common emergencies, participate in cage-side rounds, and be exposed to	

Course Bulletin

inpatient care of critical animals. Spend time with our ECC staff (criticalists, residents, interns, emergency veterinarians) and start to build the skills needed to succeed in a busy emergency and critical care hospital.

140085	Enrichment Week-Cytology of Cutaneous Lesions
Subject: VET	Catalog Nbr: 3011
Participants will have a chance to practice performing fine needle aspirates, and make squash preparations and impression smears. As a group we will review the cytologic appearance of common dermatologic abnormalities and cutaneous lesions, including both inflammatory and neoplastic lesions.	

140086	Enrichment Week-Equine Practical
Subject: VET	Catalog Nbr: 3012
discussions in the morning followed by wetlab time in the afternoon to practice procedures, improve technical skills, and obtain hands-on experience with horses. Topics include: physical exam, physical and chemical restraint, field emergencies, field anesthesia and castration, oral examination and dental care, basic foot care and lameness examination and advanced bandage application, and breeding and soundness examination and female reproductive evaluation. There will be one day spent with a farrier learning how to evaluate and handle horses feet, including shoe removal, trimming, foot anatomy and evaluation and placement of shoes. Basic procedures that students will perform include: review of physical exam (filling out health certificates and EIA forms), blood collection, administration of injections and oral medications, practical ocular examination, nasogastric intubation, lameness exam, bandage applications, rectal palpation and ultrasonography, vaginal exams and urinary catheterization. Also a prepurchase examination of a horse will be performed and students will have the ability to practice radiographic techniques to obtain adequate radiographs in the field. One full day will involve a visit to the University of Connecticut to perform endoscopy on horses and perform dentistry examinations and routine dental care.	

140087	Enrichment Week-Lab Data Interpretation
Subject: VET	Catalog Nbr: 3013
This elective offers a low stress, chance to practice interpreting lab data, right before going into clinics. Participants will be given some case material (emphasis on chemistry data, but other data such as CBCs, cytology results may be included) to look over ahead of time and then the group will discuss possible differential diagnoses for the identified abnormalities, underlying mechanisms and further workup that might assist in reaching a final diagnosis.	

140088	Enrichment Week-Camelid Medicine & Reproduction
Subject: VET	Catalog Nbr: 3014
This one day elective covers a variety of aspects of llama and alpaca medicine, including reproductive	

Course Bulletin

examination (ultrasound/vaginal examination wetlab)

Topics covered:

- Sedation and field anesthesia
- Common neurological diseases and diagnostics (e.g. spinal tap)
- How to interpret "respiratory disease" in camelids
- How to interpret "colic" and "GI disease" in camelids
- How to interpret "metabolic diseases" in camelids
- The critically ill cria
- Reproductive examination (male / female) [wet lab]

140089	Enrichment Week-Intro ot Physical Therapy & Rehabilitation
Subject: VET	Catalog Nbr: 3015
A series of lectures on introduction to principles of physical therapy and rehabilitation, indications and benefits for these modalities, how to prescribe this for your patients, video demonstration of some basic techniques, and how to pursue additional training and certification in PTR. We will hopefully be able to demonstrate some techniques on some of our own dogs.	

140090	Enrichment Week-SA Clinical Nutrition Bootcamp
Subject: VET	Catalog Nbr: 3016
This short course is designed to prepare students for the basic essentials in providing nutritional guidance and management for your small animal patients in practice. Topics will include reading pet food labels and doing calculations, the Top Ten Nutrition Mistakes we see frequently, learn in an interactive setting how a nutritionist approaches a case, and finally, the last hour will be student's choice, decided by those students signed up by survey in advance. (Popular sessions in the past have been FAQ, case studies, work through your own pet's management, home cooked diets, and more.)	

140091	Enrichment Week-Integrative Management of Chronic Pain/Small Animal
Subject: VET	Catalog Nbr: 3017
Management of chronic pain in dogs and cats is a challenge that every general practitioner faces. While medications are essential, there are a number of ways that pain can be managed using non pharmacologic therapies such as acupuncture, trigger point therapy, exercise, low level laser, chiropractic adjustment, etc., adding nutrition and other lifestyle changes. If you are keen to learn some of the basics about how these modalities may work, how to pursue advanced training, and how you can integrate them into your practice, then this should be a day well spent. Case examples and video demonstrations will be used to illustrate the various strategies.	

140092	Enrichment Week-Client Interactions & Customer Service

Course Bulletin

Subject:	Catalog Nbr:
VET	3018
This elective will focus on common things that create customer dissatisfaction in the hospital and what can be done to avoid these. It will also provide tips on how to address issues that arise. There will be case scenarios provided for the students to work on and each case will then be reviewed as a group. These cases scenarios will be based on actual problems we have faced in the past. There will be some role playing for the braver students depending on the case being discussed.	

140093	LASx Bovine Omentopexy Lab
Subject:	Catalog Nbr:
VET	3019
In the lab you will work as a team of two to three students to perform the anesthetic blocks, the surgical scrub, and an omentopexy procedure. You will also be required to provide the post-operative care for the heifer. This includes checking on the animal am and pm immediately following surgery (2 days), then once daily (SOAP) until the time of suture removal at 2 weeks. This includes weekends and holidays. You are also required to perform all of the treatments (which may be more than once daily) that your cow may require if she becomes sick. Patient SOAPS must be completed between 7:40 am & 8 a.m. on non-holiday weekdays and between 8:40 am - 9 a.m. on weekend days and holidays. Failure to take care of the animal properly and humanely will result in failure of the course.

140100	Pine Bush Equine
Subject: VET	Catalog Nbr: 5353
96 Warn Ave Pine Bush, NY 12566 Phone: 845-361-4917 Fax: 845-361-1797 Pine Bush Equine is a full service equine veterinary facility located in Orange County, NY. We have five veterinarians on staff for all of your medical needs. We offer on site visits or ambulatory care within our wide service area including parts of Orange, Ulster and Sullivan counties. You will find our veterinarians and staff to be highly skilled as well as kind and caring.	

140101	University of Washington-Lab Animal Medicine
Subject: VET	Catalog Nbr: 5354
Clinical Clerkship Program in Laboratory Animal Medicine for Veterinary Students The four-week clerkship for senior veterinary students is designed to: 1.acquaint the student with the field of laboratory animal medicine; 2.provide an opportunity to learn restraint, physical examination, administration of medications,	

Course Bulletin

venipuncture, anesthesia, and euthanasia of laboratory animals;
 3.familiarize the student with the roles and opportunities of veterinarians in biomedical research as a member of a multidisciplinary research team;
 4.provide experience at anatomic pathology and the correlation of clinical findings with gross and microscopic changes;
 5.acquaint the student with government regulations designed to ensure the humane care of laboratory animals.

The clerkship program includes participation in clinics, necropsy, histopathology services, classroom instruction, and training classes of the Department of Comparative Medicine. Also included are visitations to the Washington National Primate Research Center and a local biotechnology company, and the presentation of an informal seminar to the Department.

If you are interested, or have further questions regarding the four-week clerkship, please contact Dr. Brian Iritani at 221-3932 or email biritani@uw.edu, or Cecil Mancebo at 221-3396 / 543-8047 or email cmancebo@uw.edu.

140157	Smith Ridge Veterinary Center
Subject: VET	Catalog Nbr: 5370
600 Oakridge Dr, South Salem, NY 10590 (914) 533-6066 We offer the “intelligent integration” of conventional and complementary veterinary medicine... For over two decades, Smith Ridge Veterinary Center has provided a combination of conventional and complementary veterinary medicine for both healthy and ill animals. Our experience in the “intelligent integration” of the most effective therapies from both worlds offers a unique resource to clients seeking the best possible care for their animal. The practice was founded in 1984 by internationally famous veterinarian Dr. Martin Goldstein, or Dr. Marty as he is more often called, who pioneered many of the methods used in the care of animals brought to Smith Ridge. Early in the development of the practice, Dr. Marty recognized that the world of veterinary medicine was dividing into an “either/or” choice for clients. Pet owners were forced to choose either a conventional approach or one based on alternative therapies. But	

Course Bulletin

Dr. Marty realized that a combined approach would offer the strongest path to maintaining good health and promoting healing in animals who were ill. The integrated knowledge and protocols he developed are now used by all of the Smith Ridge veterinarians and support staff for the animals entrusted to our care.

140159	Camp Pendleton Veterinary Treatment Facility
Subject: VET	Catalog Nbr: 5372
The mission of the Camp Pendleton Veterinary Treatment Facility (VTF) is to not only provide complete medical and surgical care for the military working dogs (MWDs), but to also provide high quality veterinary care at a reasonable cost for the pets of our military community. Because our primary attention must be devoted to maintaining the deployability and health of our canine warriors, the MWDs, we are unable to function as a full-service veterinary hospital. In light of our demanding mission with the MWDs, we focus our privately-owned animal (POA) mission on preventive medicine. We offer appointments for vaccinations, microchip implantation, health certificates for travel, wellness exams, and limited sick call. We encourage our clients to call our appointment line for availability of sick call appointments, but also realize that it often may be in the pet's best interest to be seen off-base in emergencies, non-elective surgeries, or cases requiring hospitalization or advanced diagnostics. Surgery The demanding Camp Pendleton MWD mission does not always allow us to accommodate routine surgical procedures for our privately owned animals. Currently, we are able to offer limited spay/neuter appointments and other special surgical procedures. Please call the clinic for our current surgical capabilities. These limited surgical opportunities are not based on a client's rank or position, and their availability is dependent on the Army staff's other ongoing missions. Bldg. 20846 Camp Pendleton, CA, 92055 Appointment Line: (760) 725-3439 Fax: (760) 725-3625

140262	Georgia Sea Turtle Center
Subject: VET	Catalog Nbr: 5379
Address: 100 James Road, Jekyll Island, GA 31527 Tel: 1 (877) 4-JEKYLL The Georgia Sea Turtle Center was created and is operated by the Jekyll Island Authority as a primary conservation program dedicated to increasing awareness through sea turtle education, rehabilitation, and research programs. The Georgia Sea Turtle Center empowers individuals to act locally, regionally, and globally to protect the environment. The GSTC was opened in 2007 with an unyielding philosophy, one committed to increasing awareness of habitat and wildlife conservation challenges, promoting responsibility for ecosystem health, and empowering individuals to act locally, regionally, and globally to protect the environment. Though the organization is a relatively new one, the GSTC has already charted fresh territory with its singular charge of managing coastal habitats for native and endangered wildlife through field biology efforts and increasing public awareness of environmental degradation and healthy wildlife interactions. As urbanization continues to alter natural habitats, it becomes increasingly essential to strike a balance between human presence and environmental integrity while maintaining effective wildlife conflict resolution techniques.	

Course Bulletin

The Georgia Sea Turtle Center is an advanced hospital but open to the general public, offering an interactive Exhibit Gallery and Rehabilitation Pavilion with a many sea turtle patients regularly on view for guests. Additionally, indoor and outdoor educational programs are available year-round for guests of all ages.

Course Bulletin

Built by Dr. James Burns in 1969, the Rochester Equine Clinic provided three and a half decades of quality service to New England horses, owners, trainers, veterinarians and farriers.

Dr. Grant Myhre brings over 40 years of referral experience, the most in New England, to MEC. Arriving in 1978, Dr. Myhre has led the facility, becoming instrumental in the development of the complex. Many others have contributed to the success of the facility over the years and their efforts are appreciated. In 2008 Dr. Ron Vin joined MEC full-time, adding his expertise in internal medicine.

With newly remodeled facilities in 2005, Rochester Equine Clinic evolved into Myhre Equine Clinic continuing the same high quality of care. New state-of-the-art technology takes MEC to the highest level of veterinary diagnostics and care, not only in New England, but in the United States. Myhre Equine Clinic has the most experienced veterinary surgeon, diagnosticians and highly educated and caring staff working with digital radiography, Computer Assisted Tomography (C.A.T.), and Magnetic Resonance Imaging (MRI) and nuclear scintigraphy. We continually strive to provide you and your horse with the most caring treatment and modern technology available now and in the future.

78 Deerfoot Rd, Southborough, MA 01772 (508) 485-4259 Fax: (508) 485-5246 E-mail: info@southboroughvet.com The Southborough Veterinary Hospital has served Southborough, Marlborough, Hopkinton, Framingham, Westborough, Ashland and other Boston Metrowest Communities for close to 30 years. Since its inception, the SVH has provided care to the pets of the Metrowest area in a comfortable, home-like setting. We are committed to providing compassionate, high quality medicine to small animal patients at all life stages. Our patients include dogs, cats, pocket pets, guinea pigs, rabbits, ferrets and some reptiles. SVH is involved with our community. Each year we participate in the Southborough rabies clinic providing low cost rabies vaccines to cats and dogs in the community. SVH also works with several of the humane societies and rescue groups in the area, providing quality veterinary care at low cost. Our doctors make appearances in the local school system to provide educational enrichment to children of all ages. We also host charitable events such as the annual Toys for Tots collection during the holiday season. Dr. Ogden and Dr. Westphal took over ownership of the SVH in 1999. Both veterinarians came to Southborough after working for several years as associate veterinarians in other small	

Course Bulletin

animal practices in Massachusetts (Randolph and Edgartown). Dr. Ogden and Dr. Westphal met during a rigorous 13-month internship at the prestigious Angell Memorial Animal Hospital in Boston. Dr. Westphal received her veterinary degree from the University of Pennsylvania, and Dr. Ogden received her degree from the University of Minnesota, both graduating with high honors. Dr. Ogden and Dr. Westphal are members of the American Veterinary Medical Association and the Massachusetts Veterinary Medical Association.

Southborough Veterinary Hospital is a 3-veterinarian practice, with a comprehensive support staff of animal technicians, receptionists and managerial staff. We offer a full range of services to both well and sick patients, with on-site access to radiography (x-rays), extensive anesthesia monitoring, surgical and dental procedures and diagnostics such as blood and urine analyzers, ocular tonometry, direct and indirect blood pressure measurements and dental radiography.

Fax: 773-281-1375

Animal Dermatology Center of Chicago is the only veterinary dermatology practice in the city of Chicago. Our board-certified dermatologists specialize in the study and treatment of all diseases of the skin and coat of animals, including the nose, ears, nails, and pads.

Diagnosing and treating allergies is our most common service. Allergies in dogs and cats are treatable, life-long diseases that commonly show up as skin and ear problems. Allergies can worsen as pets grow older unless we are able to successfully intervene. Our veterinarians and highly skilled technical staff will work closely with you, as well as with your pet's regular veterinarian, to provide the best possible care for your beloved pet.

We provide consultation, extensive client education, and state-of-the-art diagnostics and treatment options, such as

- intradermal test for allergies
- video otoscopy
- skin biopsy
- culture
- skin scraping and cytology
- allergen-specific immunotherapy
- tailored therapeutic plans

Digital photography is often used to evaluate progress in your pet's condition. The care your pet receives from ADCC will result in a better quality of life by improving your pet's health.

565 Mahoe Street, Te Awamutu, New Zealand Phone: (07) 872 0004 Small Animals: (07) 872 0005 Fax: (07) 871 5060 VETFOCUS is a veterinary club practice, incorporated in 1942. The business has a board of directors who are farmers from the region. They are involved in dairying, sheep and beef breeding and dry stock farming. The club structure ensures that our strategic direction is aligned with the agricultural sector and delivers the services and products that farmers require. Being an incorporated society creates financial benefits that are passed onto the members as: •Greater proportion of experienced veterinarians •Business profits are re-invested in education, technology and equipment •Cost benefits through bulk purchasing The practice has four branches. Our main branch in Te Awamutu employs eight large animal veterinarians and 15 administrative and support staff. Our other branches are in Hamilton, Otorohanga and Putaruru. In total VETFOCUS employs 58 staff including five dedicated sales staff. In a service industry it is important to retain staff and VETFOCUS makes an ongoing significant investment into continued professional development for all staff. We also appreciate the importance of providing experience and support. At VETFOCUS, most of our veterinarians have more than 5 years and up to 20 years clinical experience.

Subject: VET	Catalog Nbr: 1336
Phone: 914-457-4000 Fax: 914-457-4001 9 Odell Plaza Yonkers, NY 10701 Our hospital offers a variety of animal anesthesia services for your pet. The term 'anesthesia' indicates the use of medications to block sensation, typically resulting in unconsciousness. Veterinary anesthesia is used for procedures that require an unconscious animal such as surgery, certain imaging studies (x-rays, MRI, CT scans) or medical procedures. Anesthesia is induced using a variety of injectable and inhaled medications. Pets undergoing anesthesia are typically pre-medicated with an injectable drug. This pre-medication helps the pet relax so that full anesthesia can be induced more smoothly and safely. Next, the pet receives intravenous medication to cause loss of consciousness. A tube is then placed into the pet's upper airway, and gas anesthesia keeps the pet comfortably anesthetized during the course of the procedure. All pets undergoing anesthesia are carefully monitored before, during and after a procedure by our veterinarians and technicians to ensure the best outcome.

140675	Smith Ridge Veterinary Center
Subject: VET	Catalog Nbr: 1412
600 Oakridge Dr, South Salem, NY 10590 (914) 533-6066 Philosophy: We approach animal health from a holistic viewpoint because we believe that disease is more than just an individual symptom, or set of symptoms, to be treated. Organ systems and functions rely on each other to maintain health. When one system is not functioning at an optimal level, neither are some of the others. Disease is best reversed by supporting all of the compromised systems, so that the body can begin to assert itself and heal itself in a more natural manner. In addition, an animal's environment, its diet, the relationship between the animal and owner, genetics and prior medical treatments all influence and impact the state of health. By looking at and evaluating all of these factors, we are able to develop a treatment plan based on the individual needs of each animal.

140678	Intercultural Outreach Initiative
Subject: VET	Catalog Nbr: 1415
IOI stands for Intercultural Outreach Initiative. We are a Florida-based 501(c)(3) registered, tax exempt, non-profit organization operating in the small community of Puerto Villamil, on the island of Isabela, the most rural of the populated islands in the archipelago of the Galápagos, Ecuador. Founded in 2006, our vision is to help establish an ecologically sustainable and socially stable local economy in the Galápagos by supporting education, conservation and social development for one of its most beautiful islands. We are proud to be the only organization on Isabela that is dedicated to supporting local initiatives now, in order to secure a better tomorrow. We've been lucky enough to have made some incredibly positive and impactful changes to the local community and are able to continue to do so with the help and support of people that want to make a real difference. We are all guilty of taking what we have for granted—even here on Isabela. In order to conserve this beautiful place it is important that the people living here have a high appreciation for it themselves, and toward that aim we educate children and adults alike to value and conserve the beauty that surrounds them, and support local initiatives with similar goals to fortify the local economic and social development cycle. We have worked hard since our launch in 2006, and the rewards and benefits we have seen have made our hard effort incredibly worthwhile. Our organization keeps growing, as does the value that we have brought and will continue to bring to this beautiful island. We have achieved an incredible amount but there is still so much more to do—as our aims and needs keep growing along with us! So...help us help them! Join us on our journey to conserve this truly spectacular place.

DPC is a full-service veterinary clinic in Davie, Florida. Since our establishment in 2001 we have placed the care, diagnosis and treatment of your pet as our primary concern. We offer a comprehensive and compassionate approach when treating our patients. Our pledge is to provide the highest quality of veterinary care at an affordable price.

140693	Loudoun Veterinary Service
Subject: VET	Catalog Nbr: 5431
1043 E Main St, Purcellville, VA 20132 (540) 338-7118 Loudoun Veterinary Service, Inc. has been serving Loudoun and it's surrounding counties since 1952 with both a small animal practice and an ambulatory farm animal practice. The large animal practice is now closed, but the small animal practice has been in its current location at 1043-A East Main Street in Purcellville since 2001. Our goal is to provide professional services to our clients through education and involvement, and to provide top quality medical care for their pets. Our staff feels strongly that client education and communication is that first step in establishing a solid on-going relationship. We have a state of the art facility with digital imaging, ultrasound, an in-house laboratory and pharmacy. We perform health and wellness exams, spays, neuters, dentals, soft tissue surgeries, orthopedics, breeding, x-rays for OFA and anything else we can possibly do to help your pet have a long, healthy life. Our staff has access to an excellent selection of veterinary specialist to whom we can refer and consult. We also stock several therapeutic foods for those patients with special dietary needs. We understand that pets are an important part of your family and we share your concern for their health and well-being.

Course Bulletin

Since its founding in 1943, the Swiss Tropical Institute (STI), now Swiss Tropical and Public Health Institute (Swiss TPH) has become a world-renowned Institution for teaching, research and services in the field of International Health Development.

The multi- and cross-disciplinary activities and experience of scientific laboratory studies, conceptual clinical work and practical transfer of technical expertise to health system planning and programmes in local, national and partner countries are the building blocks of our success.

In June 2009 the Institute for Social and Preventive Medicine of the University of Basel, internationally recognized in the areas of environmental epidemiology and women's health, was integrated into the STI. With the beginning of the year 2010, the physical integration of our offices took place, and the whole Institute has publicly taken on its new name, the "Swiss Tropical and Public Health Institute", also to be known as the "Swiss TPH".

Today over 500 colleagues from 40 nations work worldwide for the Swiss TPH in research, teaching and service provision with the single goal to facilitate and contribute to health development worldwide with a strong focus on low and middle income countries. We are determined to improve public health, strengthen health systems and reduce poverty through partnerships, mutual learning, contribution and achievement.

As an associate institute of the University of Basel, the Swiss TPH takes part in teaching within the medical, philosophy, natural sciences, and historical philosophy faculties, as well as is engaged in post-graduate education and advanced training on national and international levels.

The Swiss TPH is a public organisation of the Basel-City region receiving 19% of its core budget from Basel-City and Basel-Land (12%) and the Swiss federal government (7%). The remaining contributions (81%) are received through competitive fundraising and the earnings of our service departments.

Subject: VET	Catalog Nbr: 5447
240 Wise Center Drive • P.O. Box 6100 Mississippi State, MS 39762 662.325.3432 The Mississippi State University College of Veterinary Medicine has an elective Shelter Medicine rotation that provides veterinary students with experience in shelter medicine, spay/neuter, and humane education. The program seeks to further educate the next generation of veterinarians to care for shelter animals and to solve the problem of overpopulation of unwanted pets. Students participate in two week rotations spaying and neutering dogs and cats under the supervision of faculty. This puts these students at a tremendous advantage as most DVM only perform two to three surgeries before graduation. The surgical experience this program provides is unparalleled and instills a spirit of lifelong learning and community service. The program accepts externs from other colleges of veterinary medicine (Will provide links to information and applications here)

140737	Delaware County SPCA
Subject: VET	Catalog Nbr: 5456
555 Sandy Bank Rd, Media, PA 19063 (610) 566-1370 The Delaware County Society for Prevention of Cruelty to Animals (Delco SPCA) was established in 1911 with the original purpose of providing watering troughs for work horses around Delaware County. In 2012, the Delco SPCA became a lifesaving organization, reserving euthanasia only for animals that are incurably sick or too behaviorally aggressive to be adopted out into the community. In 2014, we placed a record 3,583 homeless pets into forever homes. We care for and adopt out pets we rescue from overcrowded shelters, pets that are relinquished by their owners as well as animals that have suffered cruelty and neglect. We are not breed-specific and have a loyalty to “bully” breeds like Pit Bulls. In addition to placing thousands of animals into forever homes, we promote responsible pet ownership and combat pet overpopulation through our pet retention programs such as low-cost public veterinary care –predominantly spaying and neutering – pet food banks, animal cruelty investigations and humane education. The Delco SPCA is a 501c3 non-profit, charitable organization registered with the Pennsylvania Department of State. We are not affiliated with any local or state government or federal agency or any other SPCA or humane group. Our work is supported entirely by private donations.

Course Bulletin

The Southern Pines Animal Shelter Board of Directors recognized the need for a systematic approach to reducing the number of unwanted animals in the Pine Belt area. In mid 2008, the Spay & Neuter planning team was formed. This committee was charged with researching proven methods for reducing unwanted animals in other areas of the United States and making recommendations regarding those methods that would be most appropriate for the Pine belt area.

The formation of the Spay & Neuter Clinic was determined to be the best approach. The gold standard for spay/neuter clinics developed by the Humane Alliance of North Carolina was utilized in designing a clinic that would model the best approaches for services provided. The clinic offers high quality, high volume, and low-cost surgeries for cats and dogs.

The clinic began as a unit that traveled around the Pine Belt area. In July of 2009 the clinic opened its Hattiesburg location. With help from grants and donors, the clinic is able to offer low cost services for pet owners. As of March of 2014 the Clinic had "fixed" over 25,000 pets and moved to a permanent more visible location on Hardy St. in Hattiesburg.

140757	SPCA of Westchester
Subject: VET	Catalog Nbr: 5470
590 N State Rd, Briarcliff Manor, NY 10510 (914) 941-2894 The SPCA of Westchester was founded in 1883 by Ossining resident Mary Dusenberry after she observed horses being mercilessly whipped and beaten as they trudged up nearby hills to deliver heavy loads of coal. Together with caring friends, she obtained land on which to build the Society's first home and established a fund to be used to prevent cruelty to animals. The SPCA is still located on the same spot, making it one of the oldest landholders in Briarcliff Manor. Originally, the SPCA of Westchester was affiliated with the ASPCA of New York City, but became an independent organization in the 1920s. Today, it is the only humane society in Westchester County empowered to enforce laws relating to animal cruelty. Despite this, the SPCA gets no federal, state, or county funds. So we rely solely on the financial support of people who care about the welfare of animals. If you care about animals, we need your help and welcome donations!

140767	Dr. Alison Cornwall
Subject: VET	Catalog Nbr: 5478
979 US Rt 2 802.505.9639 alisoncornwall@gmail.com I'm Dr Alison Cornwall and my mobile large animal practice serves Central Vermont. I treat horses, cattle, small ruminants, camelids, and pigs, and I also perform at home pet euthanasia for all large and small animals. I provide preventative medicine and husbandry as well as all aspects of general medicine and surgery from equine lameness to unwell dairy cattle to goats with skin problems and everything in between. My goal is to provide gentle, complete, and high quality care to every patient that I see while simultaneously offering owner education as it is desired. My mobile service includes digital X-Ray that allows immediate viewing of radiographs as well as reproductive and diagnostic ultrasound capabilities. My recent schooling (I graduated University of California, Davis in 2007) and extensive continuing education help me to stay on top of the most current therapies. I also have many years of practical experience from which to pull when making decisions about the health and wellbeing of my patients. I love field work and working on people's farms and can offer any level of field care. I am well accustomed to working within tight budgets, but also frequently practice very high end medicine. I also serve the small animal population of this area by providing a compassionate at-home euthanasia service for older and ill dogs and cats who are frightened by or too ill to travel to their regular small animal veterinarian's office. While it is never fun for a veterinarian to euthanize any animal, I feel that providing a gentle passing in the loving arms of their owners and in their own homes for older pets is a kindness.

The need to fight animal diseases at global level led to the creation of the Office International des Epizooties through the international Agreement signed on January 25th 1924. In May 2003 the Office became the World Organisation for Animal Health but kept its historical acronym OIE.

The OIE is the intergovernmental organisation responsible for improving animal health worldwide.

It is recognised as a reference organisation by the World Trade Organization (WTO) and in 2014 had a total of 180 Member Countries. The OIE maintains permanent relations with 45 other international and regional organisations and has Regional and sub-regional Offices on every continent.

769 Route 37 West, Toms River, NJ 08755 At Toms River Animal Hospital, helping you keep your pets happy and healthy has been our passion for more than 52 years. Over that time, we have grown into a state-of-the-art pet care hospital with an exceptional nine-doctor team. Our doctors use their more than 130 years of combined veterinary experience every day to help keep our patients in good health and feeling great. We are committed to offering the best possible care for your pets. Our doctors strive to keep at the forefront of veterinary medicine to ensure we are offering the latest treatments and procedures available. Our exceptional physician team treats dogs and cats, of course, and we also see all exotic pets. Our medical director, Dr. Levine, will often tell us that if a client can fit his or her pet in the car, we can see and treat the pet. We also have an exceptional, board-certified internist on staff to help us keep your pets in great shape, inside and out. Because technology is so important to early, accurate diagnosis and treatment of health issues, we make sure that having the most advanced medical equipment is one of our top priorities. Our high-tech hospital includes in-house digital radiography, digital dental radiography, ultrasound, endoscopy, and an advanced operating facility allowing us to diagnose and treat many of your pet's advanced medical conditions right at our hospital. Early diagnosis and treatment are the keys to long, healthy lives for our pets, and our patient care team is dedicated to taking great care of our patients. Our experience and years of service in our community help us keep our facility state-of-the-art, but we are committed to maintaining the same personalized client service we've offered since we treated our first patient in 1956. We take care of our clients' pets the same way we take care of our own and we treat our clients the way they like to be treated. Services: Animal Boarding, Animal Daycare, Animal Flea Control, Animal Microchipping, Bird Vet, Declawing, Emergency Veterinary Clinic, Exotic Animal Vet, Reptile Vet, Small Animal Vet, Spaying/Neutering, Veterinarians, Veterinary Dentistry, Veterinary Euthanasia, Veterinary Medical Specialties, Veterinary Surgery

140990	Enrichment Week-Organic Production Medicine
Subject: VET	Catalog Nbr: 3020
This elective will focus on the requirements that must be met by organic producers and ways that veterinarians can support organic clients within the allowable list of medications. We will also address the alternative treatments that farmers are likely to employ, so that we can be prepared to communicate the pros and cons of these treatments with their clients. Presenters will include at least one veterinarian and a farmer/producer, and the environment will be discussion and scenario based. We will focus mostly on dairy, and hopefully include practitioners and producers with experience with other types of livestock as well-ranging from small ruminants, beef, swine and/or poultry.	

140991	Enrichment Week-Gender One Health
Subject: VET	Catalog Nbr: 3021
The current Ebola outbreak in West Africa has public health specialists scrambling to find solutions to an epidemic that has been difficult to manage because of social and cultural issues. The spread of the infection is intertwined with peoples cultural beliefs, an area most medical practitioners, veterinarians and public health workers are least trained to handle. In the mix but completely overlooked and sidelined thus far by the public	

Course Bulletin

health specialists, policy makers, aid agencies and the multiple teams working to contain the epidemic are the gender issues that play a major role in the transmission and containment of infectious diseases and public health outcomes. Understanding gender, as well as culture and beliefs is a key public health competency. The gender differential (biological, social, economic) poses unique health risks for men and women during their life cycle. The diverse roles played by men and women create different exposure mechanisms to domestic animals, wildlife and the environment. Gender roles, the distribution of labor, and access and control over resources play an important part in the biosecurity, control, prevention and response to diseases and emerging pandemics. Therefore gender differences need to be addressed to better understand the risks, to help develop effective control and response strategies and to achieve a better impact. This short course will allow participants to develop critical analysis skills as they explore how gender, the realm of emerging pandemics threat (EPT) and One Health intersect and how policies can be developed and/or implemented to address EPT in a gender sensitive way. Participants will be challenged to consider the implications and benefits of an engendered approach in their specific disciplines and in preventing and responding to emerging pandemic threats.

214 Canal St. Unit #1, Plantsville, CT 06479 Ph: 860-620-0325 FAX: 860-620-0359 email: info@hopect.org New HOPE Clinic is CT's leader in Spay/Neuter. We are not a full service veterinary hospital, we do not provide full service vet care. We specialize in spay/neuter surgeries and we are also able to provide basic vaccinations at the time of surgery. Our goal is stop over population and provide a low cost option for responsible pet owners who are struggling financially. New HOPE Clinic is a fast paced clinic. We work very hard to fit as many animals in everyday (doing 25-40 surgeries most days). We cannot accommodate surprises or unscheduled special surgical needs for older, overweight or unhealthy animals. Please fill out your appointment request form thoroughly so we can be sure to meet your animals spay/neuter needs and not send you and your animal home without surgery.

Course Bulletin

understanding diseases of public health relevance via preclinical trials and biomedical research in nonhuman primates and other animals.

Comparative Medicine's research areas include: the effect of nutrition on disease risk, women's health, cardiovascular disease, obesity/insulin resistance and diabetes, social stress and disease, behavioral medicine, and reproductive oncology, with the majority of studies utilizing one of a range of available nonhuman primate models.

Our uniquely skilled faculty and staff serve as Wake Forest's center for primate expertise; they administer the Center for Comparative Medicine Research as well as residencies and research fellowships including a post-DVM research training program, and two training programs for specialty board certification in veterinary medicine (Laboratory Animal Medicine and Anatomic Pathology).

The faculty of Comparative Medicine is diverse and includes DVMs, PhDs and DVM/PhDs -- several with diplomate status in the American College of Laboratory Animal Medicine or the American College of Veterinary Pathology).

141188	Surgery & Anesthesiology In Research Facilities
Subject: VET	Catalog Nbr: 1468
This course is designed to provide the students with additional training in anesthesia and surgery methods relevant to the laboratory animal setting. The first portion of the course focuses on principles of anesthesia in laboratory animals with special emphasis on rodents and non-traditional species that are not typically covered in the veterinary curriculum. Pain assessment; analgesic management; determination of humane endpoints and methods of euthanasia are also covered. A rodent anesthesia laboratory is conducted allowing students to gain experience with the following: injectable and inhalant anesthetic agents, various methods of inhalant drug delivery (chamber, mask, and manifold systems), intubation techniques and monitoring techniques. The second half of the class focuses on the principles of aseptic surgery in research facilities including sterilization methods, surgical pack preparation and issues specific to rodents, USDA covered species, amphibians and reptiles. Minimally invasive surgical techniques, microsurgical techniques, and pre and post-operative care and support are also discussed. There are also practical handling laboratories involving rodents, rabbits and fish. These laboratories provide an opportunity for the students to learn appropriate restraint and handling techniques as well as practice common procedures such as injections, oral administration of compounds, catheter placement and blood collection. There are laboratories designed to provide anesthesia experience for rodents and swine.

Subject: VET	Catalog Nbr: 3024
The goal of this program is to help you to better understand canine and feline behavior, body language and communication. Students will have the opportunity to learn and practice approaches to handling cats and	

Course Bulletin

dogs in a veterinary setting that decrease patients' stress and students' risk of injury. Attention will also be giving to discussing ways of minimizing the stress of hospitalization for patients as in our care.

Course Objectives:

- Understand the basics of canine and feline behaviors and social signaling
- Learn effective ways to approach and interact with patients
- Learn and practice low stress handling techniques for examination and common procedures
- Understand basic learning theory to enhance patient compliance and reduce patient fear with effective communication
- Learn how to discuss patients' behavioral needs with owners
- Become a resource for safe and low stress handling for peers in clinics

141398	Enrichment Week-Anatomy Refresher: Dog & Cat
Subject: VET	Catalog Nbr: 3025
This short course (two half days) is designed to review surgically relevant anatomy of the dog and cat. The course will take place in the McGrath Anatomy Lab and will utilize unembalmed cadavers; an effort will be made to provide fresh cadavers, but thawed "frozen" cadavers will be available as a backup. The first half-day will be devoted to anatomical review using embalmed prosection specimens. The second half-day will be devoted to performing as many surgical approaches as participants wish to practice. Surgical examples would be: abdomen (spay, cryptorchid, resection and anastomosis, gastropexy, cystotomy, organ biopsy, etc.) extremities (toe, tail and limb amputations), and skin (wound coverage techniques). Note: Intact animals will probably not be available.

141466	Hluvukani Animal Clinic
Subject: VET	Catalog Nbr: 5581
The Hluvukani Animal Clinic (HAC) was officially opened in 2009 and serves the people of the community in keeping their animals healthy and disease free. The resident veterinarian is supported by veterinary students in their final year doing two-week clinical rotations in the community. Schools and dip tanks are visited frequently by students for animal health awareness and information sessions. Individual clinical cases are either treated at the clinic or responded to through an ambulatory service. During their two weeks at the clinic, students interact with ecologists, local state veterinarians, and medical students from the Wits School for Public Health, University of the Witwatersrand who does clinical rotations in human clinics in the area at the same time. These interactions provide unique and exciting opportunities for both veterinary and medical students to interact and learn more about the philosophy and relevance of the 'One Health' approach in this complex environment. The clinic further serves as a centre for the coordination of clinical research in the area and further assist in longitudinal studies and sampling through either students or visiting clinicians. For more on the Department of Agriculture and Rural Development and Land Administration in Mpumalanga and their initiatives go to http://www.mpumalanga.gov.za/dept/agriculture.htm

88 Riverside Drive • Lebanon • NH • 03766 • (603) 448-4448 At Stoney Brook Veterinary Hospital, we strive to provide comprehensive and consistent care for your pet. Dr. Kim Jones and the staff at Stoney Brook Veterinary Hospital are dedicated to the health and well-being of pets throughout the Upper Valley region of New Hampshire and Vermont. We care mostly for dogs and cats, but offer some basic medical services for exotic pets/small mammals, including rabbits, guinea pigs, ferrets, hamsters and rats. Our modern animal hospital was constructed in 2009 and features the latest veterinary medical technology. We use electronic medical records in order to more efficiently care for your pet. We can easily network to external laboratories and specialists. Your dog or cat has access to advanced digital veterinary radiology and veterinary ultrasound services at Stoney Brook Veterinary Hospital, as well as a state-of-the-art surgical suite and treatment area. We offer convenient pick-up and drop-off services for the greatest flexibility of diagnostic and surgical care. Stoney Brook Veterinary Hospital provides complete care for your beloved pet. Our progressive animal hospital offers small animal massage therapy and canine physical therapy (performed by a certified canine rehabilitation specialist. Stoney Brook Veterinary Hospital performs the latest veterinary oncology and chemotherapy treatments, as well. We are one of the few veterinary hospitals in the Lebanon and Hanover, NH area to offer these services.

Hahaklait Veterinary Services 38900 Caesaria Industrial Park, P.O.B. 3039 388900 Israel el: 972-4-6279600 Our Beginning	

Course Bulletin

Hahakalit was established back in 1919 by a handful of enthusiastic pioneer farmers. The vision they had was to combine a mutual insurance policy with comprehensive veterinary medicine. The initial motive was to protect valuable cattle, which were imported into a hot land, burdened with disease. Hahaklait was founded as a cooperative, which was owned and managed by the farmers for the benefit of the farmers. The veterinarians were contracted as the employees of the cooperative. From its small beginning as a few farms around the Sea of Galilee, Hahaklait grew hand in hand with the Israeli Food Animal Industry to encompass the entire country.

Our Mission

Today, 85 years later, Hahakalit is still a strong and thriving unique organization both in size and philosophy, in the veterinary world. Hahakalit is a non-profitable organization, still owned and managed by the farmers for their benefit. Our basic goal is to give our clients the best veterinary service at a reasonable cost. Each farm pays a yearly fixed rate per animal in order to cover all routine and emergency medical needs. Thus, Hahakalit has a long term and stable contract with the farm, and is committed to the well being of the animals, as well as to the sound economy of the farm.

Our Services

Hahaklait believes in intensive service at all levels: sick individual cows, herd health, prevention and control of infectious and production diseases, as well as food safety and animal welfare. Our vets visit each farm two to three times a week, and each cow receives several routine visits per lactation, to make sure she is producing at maximal efficiency. Cows are checked after calving for both clinical and sub clinical diseases, for reproductive status and before drying up. All the data from each individual cow is collected at the farm and processed by Hahaklait. Hahaklait is also supporting and performing clinical field trials

Our Clientele

Hahaklait serves 900 dairy farms with over 90,000 milking cows, which comprise more than 80% of the dairy cattle population in Israel. These are made up of 190 large Kibbutz herds and 700 smaller Moshav (family) dairy farms. There are approximately 50 beef herds with 20,000 dams and some 250 feedlots with 30,000 steers, as well as 200 sheep and goat farms. The horse population, once the vehicle of our early Vets and a valuable farm force, is now a small portion of our work (1,000) .

At Acton Animal Hospital our goal is to provide exceptional care for dogs, cats and other small mammals. We offer a small, friendly environment with an emphasis on client communication and ongoing education.

Acton Animal Hospital has continuously operated in this area since 1957, and serves Acton and the surrounding communities. Dr. Daphne Flessas purchased the hospital in 2015, continuing the hospital's long history of family ownership. She has updated the hospital with digital radiography, electronic medical records, and an online pharmacy for your convenience.

Our hospital continues to offer the high quality medicine that has made it your favorite neighborhood veterinary practice for almost 60 years. Currently the practice has four veterinarians and ten support staff. Our small friendly office environment offers quality medical care with an emphasis on client communication, as well as ongoing education on a wide variety of important pet health topics.

Bearsted Road, Maidstone, Kent, ME14 5EL E-mail: equine@newnhamvets.com Phone: 01622 737884 Fax: 01622 632854 History of Newnham Court Equine Clinic Newnham Court Equine Clinic, part of Newnham Court Veterinary Group, was established in the early 1990s, although the veterinary practice has been established for over 100 years. Since then, it has expanded to become a 7 vet ambulatory practice with fully equipped clinic facilities, and is an RCVS Accredited Equine Practice. Currently, 7 vets work in the practice, supported by nursing, yard and office staff. Our equine vets provide high quality care to horses, ponies and donkeys throughout much of Kent. Our modern, purpose-built equine clinic is based on the outskirts of Maidstone, Kent in view of the beautiful North Downs. The ambulatory practice and clinic facilities are fully intergrated, so your horse, pony or donkey will benefit from the immense depth of knowledge and experience of all 7 vets, whether at your yard, or at the clinic.

141639	Baker Institute for Animal Health
Subject: VET	Catalog Nbr: 1491
The Baker Institute has long been known for its work on infectious diseases of animals, and that work continues today in studies of several important pathogens, including canine influenza, calicivirus (which strikes cats), canine herpesvirus, the parasite trichinella, and bovine papillomavirus, a virus that recently crossed over from cattle into horses. Evidence indicates that bovine papillomavirus is the cause of the most common type of cancer in horses: sarcoid tumors, which are invasive wart-like lesions or skin ulcers. Dr. Doug Antczak and his trainees are studying the reasons different horses show different susceptibility to sarcoids, work that could lead to new methods for treating or preventing this life-threatening disease. For Dr. Antczak, the goal is to relieve suffering in horses, arguably our most helpful and hardworking companion animals. Miller & Associates is driven by the belief that successful treatment starts with a precise diagnosis. For more than 15 years, the veterinarians at Miller & Associates have followed this pursuit and employ state-of-the-art technologies, combined with commonsense horsemanship, to help horses lead happier and healthier lives.

Located in horse-friendly upper Westchester, County, New York, Miller & Associates was established in 1997 as a sport horse-oriented practice serving the local hunter/jumper community. Today, the practice has grown to include eleven veterinarians and an expanded range of services that diagnose, treat and prevent equine injury, illness and disease.

Our services include the latest technologies combined with traditional treatments to insure each patient receives the utmost in care. Whether the need is acupuncture, chiropractics, dentistry, radiology, advanced wound care, rehabilitative therapy, sports medicine or nutrition, Miller & Associate veterinarians are equipped to meet your needs.

Our team will thoroughly investigate your horse's condition before deciding on a treatment course, and all Miller & Associate veterinarians are capable of performing digital ultrasounds and digital radiographs in the field. Alternatively, clients may ship their horses to our diagnostic and therapy center at our new facility in Brewster, New York.

141833	Cedarbrook Veterinary Care
Subject: VET	Catalog Nbr: 5689
9812 215th Avenue SE, Snohomish, WA 98290 Phone: (360) 794-9255 Email: info@CedarbrookVet.com Our practice believes a holistic combination of possible modalities is the best way to provide cutting edge care to our patients. Traditional western medicine misses so may valuable treatment options that alternative medicine has to offer, and in many cases the root of the problem. Alternative medicine misses the leading edge of diagnostics and equally valuable medical treatment options. Rather than just considering alternative vs. traditional medicines, our 'holistic' practice combines the two to be truly on the forefront of what medicine has to offer. Cedarbrook fully encompasses the word holistic – it is inclusive and provides for the complete high quality care for all aspects of the whole patient — mind, body, herd, environment, nutrition, fitness, etc. The balancing of these energies for fitness/bodywork avails our vets to a higher understanding for veterinary services, bio-mechanics, physical therapy and the like. This experience and intention strengthens our veterinarian's perception and evaluation abilities to discern both the physical and energy potential of our patients.

142402	Humane Rescue Alliance
Subject: VET	Catalog Nbr: 5734
71 Oglethorpe Street, NW, Washington, DC 20011 202-726-2556 The Humane Rescue Alliance was established by the historic merger of two iconic animal welfare organizations: the Washington Humane Society (WHS) and the Washington Animal Rescue League (WARL). Both organizations have more than a century of experience protecting, rescuing, and caring for animals in the District of Columbia. WHS was established in 1870 as the only Congressionally-chartered animal welfare agency in the United States while WARL, founded in 1914, operated the first animal shelter in the nation's capital. Over the decades, thousands of animals—and people—have benefited from WHS and WARL programs and services. Building on the success of these organizations and bringing together their progressive programs and services, the Humane Rescue Alliance now provides area residents with a single destination for animal-related needs, whether it is a search for a new companion to join their family, financial assistance with veterinary care or pet food, assistance with behavioral problems, vaccination or spay/neuter services, or help from officers for a lost, injured, or abused animal. We hope to serve as a model for other animal welfare organizations and to create a community where there is a loving home for every unwanted animal, affordable medical care for every sick and injured animal, an end to animal abuse and cruelty, and stronger bonds between animals and people through education and training.

13600 Chimpanzee Place Keithville, LA 71047 Phone: 318-925-9575 information@chimphaven.org Located 22 miles southwest of Shreveport, La., in the Eddie D. Jones Nature Park in Keithville, La., Chimp Haven serves as The National Chimpanzee Sanctuary. Natural groundcover, trees, and climbing structures provide the backdrop for a stimulating and dynamic environment necessary for chimpanzee development and rehabilitation. The chimpanzees can make sleeping nests from vegetation provided by animal care staff or they can build nests from the trees and plants found in the wooded habitat. Towering trees and 20-ft play structures offer climbing, swinging and resting options as well as views of the surrounding area. How the chimpanzees choose to spend their day is up to them.

143376	Boston Road Animal Clinic
Subject: VET	Catalog Nbr: 5871
(508) 865-5500 239 Boston Rd, Sutton, MA 01590 Boston Road Animal Clinic first opened its doors on January 1993. In late 2009 Dr Dyer purchased our clinic and became the new Chief of Staff, with the mission to provide the highest quality care. Our doctors and technicians excel in their abilities to provide the best treatment options to prolong the quality of life for your pet. We strive to give the best possible care in a compassionate and family-friendly environment. We welcome all clients and wish to help them to care for their pets by providing preventative medicine such as vaccines and annual exams, care for sick and injured pets, routine and non-routine surgery, behavioral consults, and a full array of medical diets. Our capabilities additionally include excellence in ultrasound, dentistry, internal medicine, and acupuncture, and we are proud to service the Greater Worcester County area with our client base reaching far and wide throughout the region. We do not, however, assist with any in-home or off-site services.	

143377	Spokane Humane Society
Subject: VET	Catalog Nbr: 5872
The Spokane Humane Society was founded by a group of concerned citizens in 1897. Back then, we looked after the draft horses used to carry loads up Spokane's South Hill. Today, we take care of more than 5,000 animals each year, mostly dogs and cats in need of compassionate care. Over the years, we're becoming Spokane's go-to pet adoption center. When we consider our more than one hundred years of history we are humbled to think of how much private funding we've received from those of you in the Spokane community who care deeply about the welfare of homeless pets. 509-467-5235 6607 N Havana St Spokane, WA 99217

143513	Costa Rica Animal Rescue Center
Subject: VET	Catalog Nbr: 5919
San Miguel, Alajuela At the Costa Rica Animal Rescue Center we are dedicated to protect and help endangered Costa Rican wildlife with all means available to us. Our first and foremost goal is to ensure the welfare of the animals at the center and help them recover from both, physical and psychological wounds that have arisen from their past suffering. Since many animals become victims of abuse in the tourism sector or illegal pet trade, we want to raise awareness about their mistreatment. Our work is our way of leading the change to more animal welfare and a sustainable way of living in coexistence with wildlife.

144118	CONSERVET Costa Rica 2018
Subject: VET	Catalog Nbr: 5970
info@conservet.org Institute for Global Health and Health Policy P.O. Box 882 College Station, Texas 77841 CONSERVET is an on-site course that places students in the center of the ecosystem of concern. Instructional format includes preparatory lectures, labs and group discussions, combined with hands-on immersion in field study methods that examine the complexities of environmental functions and services, as well as the consequences that can occur when natural processes are disrupted. Instructors are professionals in the field of environmental biology and medicine. Selected workshops will engage students in ongoing research investigations aimed at better defining the drivers of ecologic health and decline. Ongoing projects include capture and identification of local mosquito populations in two ecozones in relation to flavivirus vectoring, trapping and examination of rodents for parasites and blood profiling and testing for carrier states of trypanosomes, capture and sampling of amphibians for chytrid fungus, capture and testing of triatomine bugs as vectors of Chagas disease, capture, identification and sampling of bird species for avian influenza, capture, identification and sampling of bat species for external parasites and to support genetic studies, and testing local livestock species (e.g., ruminants, horses and poultry) for parasitic and viral exposures through fecal and blood collections and examinations. CONSERVET students are oriented toward the basic principles of ecologic (One Health) medicine, with an emphasis on the root causes of disease (e.g., climate change, land-use change, biodiversity loss, illegal wildlife trading) and presented with specific features that define the field environment in which the course is being conducted. Since populations often form the units of concern in ecosystem decline, basic epidemiological concepts, including an introduction to the concepts of geographic information systems) will be presented that enable a definition of health dysfunctions and the development of appropriate interventions available for the ecosystem health practitioner. Toad in hand CONSERVET considers the complexities that can compromise effective and sustainable solutions to global wellness by not only exploring the science available to define health problems but also the difficulties in formulating policies that allow scientific knowledge to be effectively applied. Since the practice of global medicine very often encompasses socioeconomic dimensions, workshops underscore the need to work across professional disciplines to meet the challenges inherent in establishing protocols that mitigate illness in a context where conflicts of interest can disrupt ecosystem stability. CONSERVET workshops move beyond the more traditional passive didactic classroom formats to create a highly participatory educational environment to provide professional students with the most effective learning platform.

Chase Farm Veterinary Hospital
35 Ventura Drive
North Dartmouth, MA, 02747-1244

Chase Farm Veterinary Hospital is a five doctor practice. The goal of our team is to provide high quality care for both our clients and patients in a friendly and informative environment. We are open Monday through Thursday from 7:30 a.m. until 7:00 p.m., Friday from 7:30 a.m. until 6:00 p.m., and Saturday from 8:00 a.m. until 2:00 p.m.

In addition to routine health care and vaccinations, our hospital provides daytime emergency care for our clients and overnight care to our sick but stable patients. We provide diagnostic services such as digital x-ray, digital dental x-ray, and in-house lab work. We provide surgical procedures such as spays, neuters, abscess repairs, and dental extractions just to name a few.

We also provide holistic and alternative care in the areas of acupuncture, Chinese herbal medicine, laser therapy, and underwater treadmill therapy.

Our hospital enlists the professional services of a Board Certified Surgeon and a Board Certified Cardiologist to aid us in our goal in providing high quality care. Through these specialists, we are able to offer our clients referral level care without the need to travel to a referral hospital.

144399	Human-Animal Relationships
Subject: VET	Catalog Nbr: 106
This course is designed to enrich the student's understanding of relationships with animals and to stimulate creative thinking about the expanding horizons of human-animal interactions (HAI). Class sessions, which include a major allocation of time for student discussion, touch on a range of issues affecting companion animals, wildlife, farm animals, horses, research animals, public health, and social and cultural values of individuals and communities. Students are asked to think about and discuss HAI issues from various perspectives, including societal, veterinary professional, veterinary educational and individual. The goal of the course is to develop each student's ability to consider the diverse relationships among animals, people and the veterinary profession. Prerequisite: Matriculation into the DVM program or with permission from the course director

144693	Business and Practice Management
Subject:	Catalog Nbr:
VET	6051
This clinical elective provides you with opportunities to learn about business and practice management while also gaining clinical experience. You will visit five practices over two weeks and spend two days at each practice to learn about business and practice management. The three core domains for this elective are 1) the journey to practice ownership, 2) leadership, team building, and staffing, and 3) financial decision making. Practice owners and others involved in running the practice have committed to meeting with you each day to discuss specific aspects of business, and the rest of the time will be spent seeing patients and gaining clinical experience. On Day 1, your meeting will focus on three core domains so that you can compare different practices, and on Day 2 you will ask your own questions. We encourage you to explore different areas, depending upon your observations and own interests. By taking this elective you are assuming the responsibilities outlined below: • To prepare questions to ask the practice owners and others in the practices. • To participate in clinical activities outside of times when you are in meetings. • To maintain a reflective journal with daily entries on Canvas during the two-week elective. • To participate in a meeting at the end of the clinical year to share your experiences. Interested students should contact Drs. Flessas (daphne880@gmail.com) and Ahmed (charine.ahmed@merck.com) to schedule an elective.

144788	Enrichment Week-Fear Free Day
Subject: VET	Catalog Nbr: 3037
Fear Free Certification is an online training program for veterinary professionals designed to provide the knowledge and tools for delivering low stress care to patients. It will be invaluable during your clinical year in the Foster Hospital for Small Animals and during your post commencement career. The 8 hour certification is offered free to Cummings students. It can be completed individually by going to www.fearfreepets.com. But why work alone? Join us Friday, February 28, 8-5 to complete the online training course together. We will each work on our own laptop but break together for food and talk about what we are learning. The goal is to all be certified at the end of the day.	

144789	Enrichment Week-Paddock to Practice: Equine Assisted Learning for Exploration of Personal Well-Being
Subject: VET	Catalog Nbr: 3038
Are you feeling anxious about the start of clinical rotations? Consider the Paddock-to-Practice Enrichment Week experience that uses established Equine Assisted Learning principles to help students jump start confidence and resiliency as you prepare for 4th year. We offer an afternoon experience with gentle equine activities with our teaching herd followed by group debriefing to help students move beyond veterinary clinical skills to develop self-awareness and communication skills needed for working in clinical teams on rotations. Our selective program over the past 2 semesters has been successful in helping 1st and 2nd year Cummings students reduce stress and develop personal resiliency as well as confidence in basic handling of horses. We offer this program for students interested in a small animal, exotics, or large animal veterinary career as preparation for dealing with the moral stress and burn-out that can be part of clinical year and beyond. Personal development, communication skills, and stress reduction/coping skills are the goals of the experience, and improved confidence with horses is a bonus reward.

The Communications I course will introduce the communication skills program, and feature the core skills of	

Course Bulletin

open-ended questions, reflective listening, demonstrating empathy, non-verbal cues, and the ability to give and receive constructive peer evaluation. Students will participate in small group sessions focused on history-taking and communication core skills where each student will have the chance to approach an interaction from both the doctor's as well as the client's perspective.

Prerequisite: Completion of Year 1 courses or with permission from the course director
